

BazEkon

Characteristics:

BazEkon is a bibliographic and full-text database registering articles from Polish journals in economics, management, logistics and related sciences (almost 600 titles). Currently, almost 300 titles with full-text articles are indexed in the database. The database contains descriptions of articles from scientific and economic periodicals and series published by economic universities; it also gives the possibility to search citations.

The database registers the following documents:

- articles from journals
- publications from own publications of universities and scientific and research institutes
- conference proceedings published in journals or the above-mentioned publications

The article record contains the following data: author names, article title in Polish and English, title of the journal (with an optional link to the full texts), conference title, year, volume, page numbers, keywords and abstracts in Polish and English, language of publication, authors' affiliations and e-mail addresses, attachment bibliographies, DOI number, full texts of articles from journals whose publishers have granted licences.

The journal record contains the following data: title, publisher's name, editorial address, ISSN number, frequency, URL and e-mail address of the publisher, link to full texts (if any), MEiN score, IF, presence in DOAJ, previous or next title, data of subscribers to journals from among the libraries forming the database.

Searching:

The database can be searched by title, author name, journal title (source), country/region, publication language, year of publication, availability, citations, and any other search term. Searches can be limited to journal titles, academic journals or full text. Browsing of the database is possible according to an alphabetical index of journal titles.
