BazTech

Characteristics:
The database contains bibliographic records with abstracts of publications from 752 Polish journals and scientific notebooks in the fields of engineering, technology, sciences and environmental protection, published by Polish academic institutions. In total, the database indexes nearly 500,000 publications, gradually developing into a full-text database (over 70% of full-text journals).
The database registers the following documents:

- articles from journals
- publications from own publishing houses of universities and scientific or research institutes
- conference proceedings published in journals or in the above publications

The article record contains the following data: author names, article title in Polish and English, title of the journal (with a link to the full texts if possible), conference title, year, volume, page numbers, keywords and abstracts in Polish and English, language of publication, authors' affiliations and e-mail addresses, attachment bibliographies, DOI number, full texts of articles from journals whose publishers have granted licences.

The journal record contains the following data: title, publisher name, editorial address, ISSN, frequency, publisher's URL and e-mail, link to full texts (if any), MEiN score, IF, presence in DOAJ, previous or next title, information on subscribers of the issues from among the libraries forming the database.

Chronological range: since 1998.

Searching:

- searching for articles: by title, author name, journal title, keywords, citations, year of publication, language, type of availability or any other term
- browsing the database by title, author name, keywords, publishers, subscribers (lists of libraries subscribing to journals)
