

DOAB (Directory of Open Access Books)

Characteristics:

The DOAB service offers full texts of scientific and popular science books in various fields of knowledge. The database contains more than 50 thousand peer-reviewed books and chapters published by more than 500 publishers (including Springer, De Gruyter). The books are made available under Open Access licenses, and information about the type of license is listed next to each available title.

Searching:

Searching in the database can be carried out in a simple way by typing any term in the search field, or in an advanced way by title, ISSN or ISBN number, author's name, keywords, words from the abstract, publisher's name. To make the search more specific, Boolean operators can be applied and the search can be limited to a specific time period. The search results obtained can be further narrowed by the criterion of the language of the publication and the license under which the publication is made available.
