

## Repozytorium Centrum Otwartej Nauki CeON

### Characteristics:

The repository of the Centre for Open Science is addressed to the entire Polish scientific community. The repository makes available various types of scientific materials, such as articles, books, conference materials, reports or dissertations. Access to all materials collected in the repository is open.

### Searching:

The repository can be browsed by basic information about the resources in it. Defined filters allow browsing by publication date, author, title, subject and affiliation. You can browse the entire repository (the "whole repository" option) or part of it (when you navigate to a collection, the "this collection" option becomes active). Once you have selected the type of browsing, you can easily navigate to detailed results. For example, filtering by author allows you to select the first letter or enter the first few letters of the author's name. The browsing mechanism for the other criteria is operated analogously.
