

DOAB (Directory of Open Access Books)

Characteristics:

DOAB (Directory of Open Access Books) provides full texts of scientific and popular science books across various disciplines. The database contains over 82,000 peer-reviewed books and book chapters published by more than 700 publishers (including Springer, De Gruyter). The books are available under Open Access licenses, with license information displayed for each title.

Search Functionality:

The database can be searched using a simple keyword search or an advanced search by title, ISSN or ISBN number, author's name, keywords, words from abstracts, or publisher name. Boolean operators can be used to refine searches, and results can be limited to specific time periods. Search results can also be filtered by publication language and license type under which the work is available.
