

Biblioteka Nauki

Characteristics:

This is a full-text database that includes both articles from Polish scientific journals and selected academic books. It serves as an integrator of national Open Access resources, aggregating content from databases such as AGRO, BazTech, CEJSH, DMP-PL, and PSJD. Currently, the database offers access to over 1,700 journal titles and nearly 2,500 books across all academic disciplines. Access is free and does not require logging in. Full texts are available in PDF format; books are also provided in EPUB and MOBI formats, suitable for e-readers. Biblioteka Nauki recently launched a new, intuitive interface that simplifies content browsing and searching.

Search Functionality:

Searching begins with a basic form located in the center of the homepage, allowing users to limit results to either journal articles or books. More advanced search options are available via the "Advanced Search" feature, which includes filters such as publication date, language, and academic discipline. Alternatively, users can browse by selecting a specific field of study on the homepage to explore the latest publications.
