1. Measurement and reproduction of a complex voltage ratio with the application of digital signal processing algorithms	
<i>R. Rybski and J. Kaczmarek</i>	1
1.1. Introduction	1
1.2. Digital sine-wave sources for the reproduction of the complex voltage ratio	2
1.2.1. Complex voltage ratio	2
1.2.2. Digital sine-wave sources	3
1.2.2.1. Sinusoidal voltage generation based on direct digital synthesis techniques	3
1.2.2.2. Accuracy of digital sources of the sinusoidal voltage	8
1.3. Complex voltage measurement using the discrete Fourier transform	11
1.3.1. Sampling method for the measurement of a complex voltage ratio	11
1.3.2. Error sources of complex voltage ratio measurement by the sampling method	13
1.4. Application examples of circuits for the measurement and reproduction of the complex voltage ratio	17
1.4.1. Impedance bridge with two voltage sources	17
1.4.2. Virtual bridge	20
1.4.3. AC power calibrator	23
1.5. Summary	23
References	25
2. Estimation of correlation functions on the basis of digital signal representation	
<i>J. Lal-Jadziak</i>	29
2.1. Introduction	29
2.2. Statistical theory of quantization for moments of signals	30
2.3. Estimation errors due to A/D conversion of signals	34
2.4. Estimation errors caused by the application of A/D conversion with dither	37
2.5. Analysis of variance component coming from quantization with dither	41
2.6. Experimental research results and their assessment	43
2.7. Conclusions	45
References	46
3. Compensation of conditioning system imperfections in measuring systems	
<i>L. Furmankiewicz, M. Koziół and R. Kłosiński</i>	49
3.1. Introduction	49
3.2. Frequency error correction in power measurements	50

3.2.1.	Frequency linear model of input circuits	50
3.2.2.	Active power measurement errors	52
3.2.3.	Error correction in power measurements	53
3.2.4.	Transformer error correction of input circuits	54
3.2.5.	Error correction in the industrial transducer	55
3.3.	Quasi-inverse correction filters	57
3.3.1.	Optimization problems leading to quasi-inverse filters	60
3.3.2.	Solutions of optimization problems	60
3.3.3.	Transfer function of quasi-inverse filters	61
3.3.4.	Frequency response of quasi-inverse filters	62
3.3.5.	Approximation and stability functions	63
3.3.6.	Signal processing by quasi-inverse filters	63
3.3.7.	Simulation example	64
3.4.	Reconstruction of non-linear deformed periodic signals using the inverse circular parametric operators method	65
3.4.1.	Non-linear system approximation by a sequence of linear time-varying systems	65
3.4.2.	Description of an LPTV system using a circular parametric operator	66
3.4.3.	Measurement-based determination of circular parametric operators for LPTV and non-linear systems	67
3.4.4.	Idea of the reconstruction of the non-linear deformed periodic signal method	70
3.4.5.	Experiments	70
3.5.	Conclusions	73
	References	74
4.	Voltage and current calibrators	
	<i>A. Olencki, J. Szmytkiewicz and K. Urbański</i>	77
4.1.	Introduction	77
4.2.	Static model of the voltage calibrator	78
4.2.1.	Definitions of the calibrator	78
4.2.2.	Model of the multifunction (DC and AC voltage and current) calibrator	79
4.2.3.	Open structure of the calibrator	79
4.2.4.	Closed loop structure of the calibrator and error analysis	80
4.3.	Dynamic properties of calibrators using the closed loop structure	81
4.4.	Digital to analogue converters used in calibrators	82
4.4.1.	Basic requirements	82
4.4.2.	PWM DACs	83
4.4.3.	DACs with inductive voltage dividers	84
4.5.	Increasing the accuracy of calibrators	85
4.6.	Multiple output calibrators	87
4.7.	Calibrator as a test system	90
4.8.	Conclusions	92
	References	92

5. Assigning time parameters of distributed measurement-control systems	
<i>E. Michta and A. Markowski</i>	95
5.1. Introduction	95
5.2. Reasons of delays in DMCSs	96
5.3. Time parameters assigning approaches	97
5.4. DMCS communication model	98
5.4.1. Communication model	98
5.4.2. System task model	100
5.5. Scheduling theory in DMCS analysis	100
5.5.1. Task priority assignment schemes	101
5.5.2. Pre-emptive and non-pre-emptive systems	102
5.5.3. Offline schedulability analysis	102
5.5.4. Response time tests	103
5.6. DMCS simulation model	104
5.6.1. DMCS model structure	104
5.6.2. Simulation model based on the activity inspection method	105
5.6.3. Results of simulation	106
5.7. Verification of a simulation model	108
5.7.1. Analytical methods	108
5.7.2. Experimental approach	111
5.8. Simulation of DMCS	112
5.8.1. Influence of the DMCS and node structure on time system parameters	113
5.8.2. Parameterization of the DMCS system model	113
5.9. Summary	117
References	118
6. Sensor network design for identification of distributed parameter systems	
<i>D. Uciński, M. Patan and B. Kuczewski</i>	121
6.1. Introduction	121
6.1.1. Inverse problems for distributed parameter systems	121
6.1.2. Sensor location for parameter estimation	122
6.1.3. Previous work on optimal sensor location	124
6.1.4. Our results	126
6.1.5. Notation	127
6.2. Sensor location problem in question	128
6.3. Exact solution by branch-and-bound	131
6.3.1. Outline	131
6.3.2. Branching rule	133
6.3.3. Solving the relaxed problem via simplicial decomposition	134
6.4. Approximate solution via continuous relaxation	140
6.4.1. Conversion to the problem of finding optimal sensor densities	140
6.4.2. Optimality conditions	141
6.4.3. Exchange algorithm	143
6.5. Computational results	144
6.6. Concluding remarks	148
References	149

7. Using time series approximation methods in the modelling of industrial objects and processes	
<i>W. Miczulski and R. Szulim</i>	157
7.1. Introduction	157
7.2. Regression models	158
7.3. Examples of the usage of regression models	161
7.3.1. Exemplary object and process description	161
7.3.2. Knowledge acquisition from measurement data of complex technological process	163
7.3.3. Diagnostics of a standard radio frequency generator	168
7.4. Summary	172
References	173
8. Analytical methods and artificial neural networks in fault diagnosis and modelling of non-linear systems	
<i>J. Korbicz, M. Witczak, K. Patan, A. Janczak and M. Mrugalski</i>	175
8.1. Introduction	175
8.2. Observer-based FDI	179
8.2.1. Observers for non-linear Lipschitz systems	180
8.2.2. Extended unknown input observers	182
8.3. Neural networks in FDI schemes	183
8.3.1. Model-based approaches	184
8.3.2. Robust model-based approach	187
8.3.3. Knowledge-based approaches	191
8.3.4. Data analysis-based approaches	192
8.4. Applications	193
8.4.1. Neural network-based modelling of a DC motor	193
8.4.2. Observer-based fault detection of an induction motor	197
8.5. Conclusions	200
References	200
9. Solving optimization tasks in the construction of diagnostic systems	
<i>A. Obuchowicz, A. Pieczyński, M. Kowal and P. Prętki</i>	205
9.1. Introduction	205
9.2. Optimization tasks in FDI system design	206
9.3. Genetic programming approaches to symptom extraction systems	208
9.3.1. Input/output representation of the system via GP	208
9.3.2. Choice of the gain matrix for the robust nonlinear observer	210
9.3.3. GP approach to the state-space representation of the system	211
9.3.4. GP approach to EUIO design	212
9.4. Optimization tasks in neural models design	215
9.4.1. Optimization aspects of collecting the training set for an ANN	216
9.4.2. Evolutionary learning of ANNs	217
9.4.3. Optimization of the ANN architecture	219
9.5. Parametric uncertainty of neural networks	220
9.5.1. Adequacy of the linear approximation	221
9.5.2. Evolutionary bands for the expected response	223
9.6. Neuro-fuzzy model structure and parameters tuning	225
9.6.1. Number of partition definitions for network inputs	225

9.6.2.	Shape of the fuzzy set membership function	226
9.6.3.	Inference and defuzzification modules	227
9.6.4.	Neuro-Fuzzy structure optimization	228
9.6.5.	Neuro-fuzzy parameters tuning	230
9.7.	Conclusions	234
	References	234

10. Linear repetitive processes and multidimensional systems

	<i>K. Gałkowski, W. Paszke and B. Sulikowski</i>	241
10.1.	Introduction	241
10.2.	Models of 2D systems and repetitive processes	244
10.2.1.	Discrete LRPs	244
10.2.2.	Differential LRPs	245
10.3.	Stability conditions	246
10.4.	LMI conditions towards stability/stabilization	248
10.4.1.	Discrete LRPs	248
10.4.2.	Differential LRPs	250
10.5.	Robustness analysis	251
10.6.	Guaranteed cost control	252
10.6.1.	Guaranteed cost bound	253
10.6.2.	Guaranteed cost control with a static feedback controller	253
10.7.	$\mathcal{H}_2$ and $\mathcal{H}_\infty$ control	256
10.7.1.	$\mathcal{H}_\infty$ norm	257
10.7.2.	Static $\mathcal{H}_\infty$ controller	258
10.7.3.	$\mathcal{H}_2$ norm	258
10.7.4.	Static $\mathcal{H}_2$ controller	259
10.7.5.	Mixed $\mathcal{H}_2/\mathcal{H}_\infty$ control problem	260
10.7.6.	$\mathcal{H}_2/\mathcal{H}_\infty$ dynamic pass profile controller	261
10.8.	Output feedback based controller design	264
10.9.	Control for performance	266
10.10.	Conclusions	270
	References	270

11. Quantum information processing with applications in cryptography

	<i>R. Gielerak, E. Kuriata, M. Sawerwain and K. Pawłowski</i>	273
11.1.	Introduction	273
11.2.	Quantum computation and quantum algorithms	274
11.2.1.	Unitary standard quantum machines (UQCM)	276
11.2.2.	One Way Quantum Computing Machines (1WQCM)	277
11.2.3.	Adiabatic Quantum Computer Calculations (AQCM)	277
11.2.4.	Discussion	277
11.3.	Semantic aspects of quantum algorithms and quantum programming languages	278
11.3.1.	Quantum labelled transition system	279
11.3.2.	Operational description of superdense coding	281
11.4.	Decoherence processes	281
11.4.1.	Scenario 1 – “Total decoherence”	284
11.4.2.	Scenario 2 – “Cluster decoherence”	284

11.5. Quantum cryptography protocols, their security and technological implementations	286
11.6. Quantum computer simulator and its applications	291
11.7. Summary and conclusions	293
References	293
12. Selected methods of digital image analysis and identification for the purposes of computer graphics	
<i>S. Nikiel and P. Steć</i>	297
12.1. Introduction	297
12.2. Complex solution to the lens distortion problem in photogrammetric recon- struction for digital archaeology	299
12.2.1. Basic concepts	299
12.2.2. Modeling based on orthogonal projection	299
12.2.3. Image correction	300
12.2.4. Virtual reconstruction	303
12.2.5. Conclusions	305
12.3. Extraction of multiple objects using multi-label fast marching	306
12.3.1. Initialization	306
12.3.2. Initial segments propagation	307
12.3.3. Dynamic regularization of the motion field	308
12.3.4. Segment merging and pushing	309
12.3.5. Stop condition	312
12.3.6. Experiments	312
12.3.7. Conclusions	317
