Preface		xv
Chapter 1	Introduction	1
	1.1 General Field-Solver Applications	2
	1.2 A Note on Color Plots	3
	1.3 A Note on 3D Wireframe Views	4
	1.4 A Brief Historical View	6
	References	8
Chapter 2	CAD of Passive Components	9
	2.1 Circuit-Theory-Based CAD	10
	2.2 Field-Theory-Based CAD	13
	2.3 Solution Time for Circuit Theory and Field Theory	16
	2.4 A “Hybrid” Approach to Circuit Analysis	18
	2.5 Optimization	23
	2.6 Modern Microwave CAD—What’s Missing?	24
	2.7 The Next Decade	26
	References	27
Chapter 3	Numerical Electromagnetics	29
	3.1 Microwave Analysis and Design	30
	3.2 Methods of Electromagnetic Analysis	32
	3.3 The Features Common to All Numerical Methods	34
	3.4 The Differences Between Numerical Methods	35
	3.5 Categories of Numerical Methods	35
	3.6 Expansion Functions	37
	3.7 Strategies for Finding the Unknown Coefficients	40
	3.8 The Method of Moments	43
	3.8.1 2.5D Planar MoM Solvers	49

3.9	The Finite Element Method	50
3.9.1	Linear Expansion Functions and Unknown Coefficients	51
3.9.2	Strategy for Determining the Unknown Expansion Coefficients	53
3.10	Finite Difference and Finite Integration Methods	55
3.10.1	Finite Difference Formulations	55
3.10.2	Finite Integration Formulation	58
3.10.3	Solution Strategies	59
3.11	Finite Difference Time Domain Formulations	61
3.11.1	Stability	65
3.11.2	Initial and Boundary Conditions	66
3.11.3	Output from FDTD Simulators	66
3.12	Transmission Line Matrix Methods	67
3.12.1	TLM Basics and the Two-Dimensional TLM Shunt Mesh	67
3.12.2	The Three-Dimensional Expanded TLM Mesh	70
3.12.3	The Symmetrical Condensed Node TLM Mesh	71
3.12.4	Inhomogeneous Materials and Losses	72
3.12.5	Initial and Boundary Conditions	72
3.12.6	Stability	73
3.13	Output from Electromagnetic Simulators	73
3.14	Discussion and Conclusion	75
3.15	Further Reading	77
	References	77
Chapter 4	Alternative Classifications	81
4.1	Classification by Geometry	81
4.1.1	2D Cross-Section-Solvers	81
4.1.2	2.5D Planar-Solvers	83
4.1.3	3D Arbitrary Solvers	84
4.1.4	Summary	85
4.2	Classification by Solution Domain	85
4.2.1	Frequency Domain Solvers	86
4.2.2	Time Domain Solvers	86
4.2.3	Eigenmode-solvers	87
	References	88
Chapter 5	Moment Method Simulators	89
5.1	Closed Box Moment Method—Strengths	89
5.2	Closed Box Moment Method—Weaknesses	89
5.3	Laterally Open Moment Method—Strengths	90
5.4	Laterally Open Moment Method—Weaknesses	90
5.5	Issues Common to Both MoM Formulations	91

5.6	Exceptions to General MoM Comments	92
5.7	50-Ohm Microstrip Line	92
5.8	MoM—Cells and Subsections	95
5.9	MoM—Validation Structures	96
5.10	MoM Meshing and Convergence	98
5.10.1	Uniform Versus Edge-Meshing	99
5.10.2	Microstrip Convergence	100
5.10.3	Summary for Meshing and Impedance Convergence	101
5.11	Controlling Meshing	102
5.11.1	Meshing a Microstrip Tee-Junction	103
5.11.2	Meshing a Wiggly Coupler	105
5.11.3	Meshing a Printed Spiral Inductor	105
5.11.4	Meshing Printed Capacitors	107
5.11.5	Meshing Overlay and MIM Capacitors	111
5.11.6	Exceptions to Mesh Control Discussion	113
5.11.7	Summary for Mesh Control	113
5.12	MoM—Displaying Voltage	114
5.13	MoM—Calibration Structures	116
5.13.1	Microstrip Ideal Short Circuit	116
5.13.2	Microstrip Open Circuit	118
5.13.3	Microstrip Thin-Film Resistor	118
5.13.4	Summary for Microstrip Calibration Structures	121
5.14	Visualization	122
	References	122
Chapter 6	Finite Element Method Simulators	125
6.1	Finite Element Method—Strengths	125
6.2	Finite Element Method—Weaknesses	127
6.3	FEM Simulators—Validation Structures	128
6.4	Controlling Meshing	128
6.4.1	Meshing The Coaxial Standard— Geometrical Resolution	130
6.4.2	Meshing a Coaxial Resonator— Dummies and Seeding	132
6.4.3	Meshing a Coaxial Step Discontinuity— Dummies and Seeding	137
6.4.4	Solving the Step Discontinuity in 2D	143
6.4.5	Mesh Control Summary	143
6.5	FEM Calibration Structures	145
6.5.1	7-mm Coaxial Through Line	145
6.5.2	7-mm Coaxial Short	147
6.5.3	7-mm Shielded Coaxial Open	148
6.5.4	7-mm Coaxial Termination	149

6.5.5	7-mm Coax—TEM Behavior	150
6.6	Visualization	150
	References	151
Chapter 7	FDTD and TLM Simulators	153
7.1	FDTD and TLM—Strengths	153
7.2	FDTD and TLM—Weaknesses	154
7.3	FDTD and TLM—Validation Structures	156
7.3.1	TE ₁₀₁ Mode Convergence	158
7.3.2	Wideband Rectangular Waveguide Validation	160
7.4	Controlling Meshing	163
7.4.1	Meshing the Stripline Standard	165
7.4.2	Meshing the Coaxial Step Discontinuity	166
7.5	Visualization	170
	References	170
Chapter 8	Ports and De-embedding	173
8.1	Ports—Connecting Fields to Circuits	173
8.2	De-embedding and Unterminating	176
8.3	Closed Box MoM Ports and De-embedding	180
8.4	Laterally Open MoM Ports and De-embedding	183
8.5	3D FEM Ports and De-embedding	184
8.6	3D FDTD and TLM Ports and De-embedding	187
8.7	Internal, Lumped, and Gap Ports	189
8.7.1	Exceptions to the Comments on Internal Ports	192
8.8	Symmetry and Ports	193
	References	196
Chapter 9	Numerical Methods Summary	199
9.1	Meshing	199
9.1.1	Surface Meshing	200
9.1.2	Volume Meshing	200
9.2	Convergence	200
9.2.1	Guide Wavelength	201
9.2.2	Spatial Wavelength	201
9.2.3	Geometrical Resolution	201
9.3	Validation Structures	202
9.4	Calibration Structures	202
9.5	Ports and De-embedding	203
9.5.1	MoM Ports	203
9.5.2	FEM, FDTD, and TLM Ports	204
9.5.3	Internal, Lumped, and Gap Ports	204

Chapter 10	Microstrip	205
10.1	Discontinuities	205
10.2	Microstrip Vias and Slots	207
10.3	Microstrip 3D Vias	209
10.4	Modeling Microstrip Vias	212
10.5	Microstrip Mitered Bend	215
10.6	Microstrip Tee-Junction	217
10.7	Summary for Microstrip Discontinuities	219
10.8	Quasi-TEM Nature of Microstrip	220
10.9	Evanescence Modes in Microstrip	222
10.10	Microstrip Loss	224
10.11	Compaction of Microstrip Circuits	229
10.11.1	Cascade of Mitered Bends	230
10.11.2	Stripline Meander Line	232
10.11.3	Microstrip Branchline Coupler	233
	References	234
Chapter 11	Computing Impedance	237
11.1	Single Strip Impedance and Phase Velocity	237
11.2	Single Strip Impedance Using Symmetry	244
11.3	Coupled Line Parameters Using Symmetry	246
11.4	CPW with Dielectric Overlay	250
11.5	Buried Transmission Lines	252
11.6	Other Applications of 2D Cross-Section-Solvers	253
	References	254
Chapter 12	Vias, Via Fences, and Grounding Pads	255
12.1	Vias in FR4	255
12.2	A More Advanced Via Model	258
12.3	Summary for Microstrip Single Layer Vias	262
12.4	Via Isolation Fences—Part I	263
12.4.1	2.5D MoM Simulation	263
12.4.2	3D FEM Simulation	267
12.5	Via Isolation Fences—Part II	268
12.6	Grounding Pads	271
12.7	Summary for Grounding Pads	281
	References	282
Chapter 13	Multilayer Printed Circuit Boards	283
13.1	A Multilayer Transition in FR4	283
13.2	Controlled Impedance Transitions	290
13.2.1	Analysis Using Closed Box MoM	291

13.2.2 Analysis Using Laterally Open MoM	299
13.2.3 Analysis Using 3D FEM	301
13.3 A 10-GHz Switch Matrix	305
13.4 Summary	311
References	313
Chapter 14 Connectors	315
14.1 RF Edge-Launch Connectors	315
14.2 Digital Edge-Launch Connectors	321
14.3 Another Digital Edge-Launch Example	323
14.4 Through Hole SMA Connectors	326
14.5 Surface Mount SMA Connectors	333
14.6 Summary	336
References	337
Chapter 15 Backward Wave Couplers	339
15.1 PCS Band CPW Coupler	339
15.2 Couplers and Metal Thickness	347
15.3 Lange Couplers	357
15.4 PCS Band 15-dB Coupler	363
15.5 PCS Band Coax-to-Coax Transition	369
References	375
Chapter 16 Microstrip Filters	377
16.1 Interdigital Filters	378
16.2 Edge-Coupled Filters	384
16.3 22.5-GHz Bandpass Filter	387
16.4 3.7-GHz Bandpass Filter	394
16.5 1.5 to 5.5-GHz Bandpass Filter	399
16.6 22.5-GHz Bandstop Filter	401
References	405
Chapter 17 Other Microwave Filters	407
17.1 Coaxial Lowpass Filters	407
17.2 3.5-GHz Combline Filter	414
17.3 2.14-GHz Combline Filter	425
References	431
Chapter 18 Choosing the Right Software	433
18.1 The Solution Process From Start to Finish	433
18.2 Features All Tools Must Have	434
18.3 Features That Are Nice to Have	435
18.4 Visualization	435

18.5 Ease of Use and Total Solution Time	436
18.6 The Right Tool for the Job	437
References	438
Appendix A Survey of Field-Solver Software	439
A.1 2D Cross-Section-Solvers	439
A.1.1 Stand-Alone Software-PDE Solvers	439
A.1.2 Stand-Alone 2D Electrostatic Solvers	441
A.1.3 Summary for Stand-Alone 2D Solvers	442
A.1.4 Integrated 2D Field-Solvers	443
A.1.5 Summary for Integrated 2D Field-Solvers	445
A.2 2.5D Planar Solvers (3D Mostly Planar)	445
A.3 3D Arbitrary Geometry Solvers	449
Appendix B List of Software Vendors	453
Appendix C List of Internet Sites	457
About the Authors	459
Index	461
