

CONTENTS

Abstract	5
The most important symbols and abbreviations	7
1. Introduction	9
2. Boriding as a thermo-chemical treatment that permits boride layers of good performance properties	10
2.1. The methods of boriding	10
2.2. Boriding in a solid medium	10
2.3. Boriding in a liquid medium	11
2.4. Gas boriding	12
2.5. Boriding under glow discharge conditions	15
2.6. The mechanism of iron boride formation	16
2.7. Application properties of borided steels	22
2.7.1. Microhardness profiles and mechanical properties	22
2.7.2. Tribological properties	23
2.7.3. Residual stresses in boride layers	29
2.7.4. The other performance properties of boride layers	32
2.8. The brittleness of borided layers and possibilities of its reduction by different methods	35
2.9. Summary of literature data and conclusions	45
3. The objectives, theses and subject area of this paper	49
4. The gradient boride layers formed by borocarburing and borocarbonitriding	51
4.1. The essence of borocarburing and borocarbonitriding processes	51
4.2. Thermodynamic and kinetic conditions of carburizing preceding boriding	52
4.2.1. Thermodynamic equilibrium and required carburizing parameters before boriding	52
4.2.2. The activity of carbon in the Fe-Cr-Ni-Mn-Si-C alloys	55
4.2.3. The influence of carburizing parameters on the carbon profiles	65
4.2.4. The influence of carbonitriding parameters on the carbon profiles	70
4.2.5. Summary and conclusions	72
4.3. The microstructure of borocarbured and borocarbonitrided layers	73
4.4. Carbon profiles beneath the iron borides after borocarburing and borocarbonitriding	89
4.5. The application characteristics of borocarbured and borocarbonitrided steels	94
4.5.1. Microhardness profiles	94
4.5.2. Wear resistance tests	100
4.5.3. Low-cycle fatigue	108
4.5.4. The residual stresses	116
4.5.5. The cohesion tests	118
4.5.6. Summary and conclusions	122
4.6. The mechanism of formation of gradient borocarbured and borocarbonitrided layers	123
5. The gradient boride layers formed by laser surface modification with or without remelting	126
5.1. The essence of the production of laser heat-treated gradient boride layers	126

5.2. The microstructure of borided and borocarbured layers after laser surface modification	127
5.3. The application characteristics of borided and borocarbured steels after laser surface modification	160
5.3.1. Microhardness profiles	160
5.3.2. Wear resistance tests.....	176
5.3.3. Low-cycle fatigue	181
5.3.4. The cohesion tests	183
5.3.5. Summary and conclusions	184
5.4. The mechanism of formation of laser heat-treated gradient borided layers	185
6. Summary of paper and conclusions	189
