

Table of contents

Preface	XI
Organization	XIII
 1 <i>Earthquake engineering</i>	
A comparison of seismic wave attenuation between intraplate Norway and plate margin areas <i>A.Dahle & H.Bungum</i>	3
Consistent treatment of uncertainties in earthquake hazard evaluation <i>F.Nadim, A.Dahle & O.T.Gudmestad</i>	11
Effect of vertical accelerations on the seismic response of frames <i>C.Papaleontiou & J.M.Roesset</i>	19
Spectrum analysis of a beam under non uniform seismic motion <i>M.K.Berrah & E.Kausel</i>	27
Inelastic beams excited by earthquakes: Dynamic fluid-solid interaction <i>W.Brunner & H.Irschik</i>	33
A study of earthquake and wind induced structural response <i>J.T.Snæbjörnsson & R.Sigbjörnsson</i>	41
Nonlinear computer simulations of seismically excited wall-stiffened reinforced concrete buildings <i>K.Meskouris, W.B.Krätzig & U.Hanskötter</i>	49
Evaluation of response statistics of moment resisting multi-storey frames under seismic excitation <i>Y.Lei & F.Ziegler</i>	55
Linear elastic v nonlinear dynamic seismic response analysis of RC buildings <i>S.N.Economou, M.N.Fardis & A.Harisis</i>	63
A numerical approach to seismic interaction between adjacent buildings under P-Delta effects <i>A.A.Liolios, E.G.Galoussis & A.Elenas</i>	71
Influence of damping model on the seismic response of nonlinear SDOF systems <i>P.Fajfar, T.Vidic & M.Fischinger</i>	77

A 3D model for the analysis of building pounding during earthquakes <i>M.Papadrakakis, K.Apostolopoulou, S.Bitarakis & A.Zacharopoulos</i>	85
Steel-concrete composite frames under earthquake excitation <i>R.Kindmann & C.Meisma</i>	93
Failure mechanism of six shaking table brick masonry models <i>D.Jurukovski, Lj.Tashkov, R.Alessi & F.Zarri</i>	99
Control of a nonlinear planar servohydraulic earthquake test facility <i>X.Zhang, K.-D.Leimbach & H.Hahn</i>	107
Auxiliary drives and servodrives for active protection of structures under dynamic loads: Pre-design criteria <i>A.Carotti & R.Chiappulini</i>	115
Damage assessment in cyclically loaded reinforced concrete members <i>B.Garstka, W.B.Krätzig & F.Stangenberg</i>	121
Damage indicator improvement applied on R/C structures subjected to cyclic loading <i>K.Sadeghi, J.Lamirault & J.G.Sieffert</i>	129
Characterization of the low-cycle fatigue life of a class of energy dissipating devices <i>V.Ciampi, M.Arcangeli & S.Perno</i>	137
Influence of the stiffness and strength degradation on the dynamic behaviour of steel and composite structures under earthquake loading <i>G.Sedlacek, B.Hoffmeister, S.K.Kook, J.Kuck & T.Nguyen</i>	145
On the seismic design of dissipative bracings for seismic protection of structures <i>V.Ciampi, M.De Angelis & F.Paolacci</i>	153
A R/C element for nonlinear structural seismic analysis <i>F.Fleury, N.Ile, O.Merabet & J.M.Reynouard</i>	161
The structural ductility and the damage index for reinforced concrete structure under seismic excitations <i>A.J.Carr & M.Tabuchi</i>	169
Submerged buoyant anchored tunnels: Response analysis for earthquake excitation <i>R.Bruschi, R.Marazza & B.J.Leira</i>	177
Seismic reliability assessment of retrofitted bridges <i>M.Ciampoli & G.Augusti</i>	193
Microtremors data of South Bisan-seto bridge and estimation of ground elasticity <i>H.Higashihara</i>	201
Load generated accidental eccentricity in seismically excited structures <i>M.A.Parisi</i>	207
Cyclic response of composite steel-concrete shear links of eccentrically braced frames <i>R.Kanz & J.G.Bouwkamp</i>	213
Analysis of nonlinear behaviour of elements of large panel reinforced concrete precast systems exposed to dynamic effects <i>Z.Lj.Bozinovski & M.Velkov</i>	221

Dynamic behaviour of timber-sheathed shearwalls – Earthquake design considerations <i>H.Zeitter, K.Becker & J.G.Bouwkamp</i>	229
The experimental and analytical investigations of the behaviour of seismic isolation bearings <i>A.J.Carr, A.Mori & P.J.Moss</i>	237
Criteria for the choice of stiffness parameters in base isolation systems <i>C.Chesi</i>	245
Earthquake response of seismically isolated bridges <i>B.Bessason</i>	253
Stochastic seismic response of base-isolated structures <i>G.Muscolino, A.Pirrotta & G.Ricciardi</i>	261
 2 Soil structure interaction	
About the handbook of impedance functions for surface foundations <i>F.Cévaër & J.G.Sieffert</i>	269
The seismic response of block buildings based on sand foundations <i>X.Zeng</i>	277
Recursive evaluation of convolution integral in nonlinear soil-structure interaction analysis with application to dynamic partial uplift problem of a structure on a 3D-layered half-space <i>M.Motosaka & M.Nagano</i>	285
Material damping for lumped-parameter models of foundations <i>J.W.Meek & J.P.Wolf</i>	293
A contribution to the evaluation of waves in a half-space due to dynamic surface loadings <i>M.F.Duddeck</i>	301
Transient 3D Lamb's solution by classical approach and direct boundary element method <i>H.Takemiya & B.Steinfeld</i>	307
Selection of drop masses to generate long period waves for SASW tests <i>V.Cuéllar, J.L.Monte, J.Valerio, E.Kausel & J.M.Roesset</i>	315
Numerical modelling of the semi-infinite extent of soil medium in dynamic soil-structure interaction problems <i>S.P.Gopal Madabhushi</i>	323
Dynamic-stiffness matrix in time domain of unbounded medium by infinitesimal finite-element cell method <i>J.P.Wolf & Chongmin Song</i>	331
Physical interpretation of the energy deletion silent boundary for time domain FEM models <i>M.Osama Al-Hunaidi</i>	341
Transient shear wave propagation in viscoelastic layered media <i>D.Turhan & I.A.Alshaikh</i>	351
Centrifuge model tests on the interaction behaviour of deep and shallow foundations <i>M.Kotthaus, J.Laue & H.L.Jessberger</i>	359

Footings and frame interactions with soil to traveling stress pulses <i>G.A.Papadopoulos & B.Badalouka</i>	367
Failure process of coarse particle assemblage and its frequency dependency <i>T.Matsushima & K.Konagai</i>	373
Mixed finite element method for dynamic analysis of fluid-saturated porous media <i>P.Hölscher & F.B.J.Barends</i>	381
Analysis of pile driving: A finite-element approach <i>M.E.Mabsout & J.L.Tassoulas</i>	387
Vibratory driving of tubes into dry granular soil by combined excitation <i>H.Schmieg</i>	395
On the validity of nonlinear spring idealization of soil structure interaction <i>G.Svanø, C.Madhus & H.Langø</i>	403
Wave impeding effect by artificial bedblock for pile foundation <i>H.Takemiya, Jian-qun Jiang, H.Nakajima, G.Schmid & Nawawi Chow</i>	411
Source depth effects on impediment of waves in soil <i>Nawawi Chow, Rong Le & G.Schmid</i>	419
 3 Blast loading	
Connections in structural concrete explosion containment structures <i>T.Krauthammer & E.E.Marx III</i>	429
Backfill properties' effect on buried shelters under close-in explosions <i>T.Krauthammer, C.K.Ku & D.Chandra</i>	435
Nonlinear analysis of concrete plates exposed to transient loading <i>K.V.Høiseth</i>	441
The use of the FEM to evaluate the response of a cellular double skin cubically reinforced steel structure to static contact and impact and dynamic blast type loadings <i>D.C.Webb, K.Kormi & E.Shaghoei</i>	449
Analysis of reinforced concrete chimney structures under blast loads <i>B.S.Sarma, F.Stangenberg & R.Melzer</i>	457
Non-linear dynamic behaviour of cladding panels subject to blast loading <i>R.Hakmi & P.Leach</i>	463
Three dimensional numerical simulation of large-scale hydrogen-air-steam detonations in a nuclear reactor containment and resulting response of a model oscillator <i>W.Breitung & R.Redlinger</i>	469
Theoretical-experimental analysis of hull structural response to underwater explosions <i>G.Cobolli, R.Damonte, M.Figari & R.Iaccarino</i>	479
 4 Impacts	
A dynamic approach to ship impact assessments <i>R.A.W.Dubbers</i>	489

Ship collision with offshore structures <i>J.Amdahl & E.Eberg</i>	495
Collision properties of high speed craft <i>O.Aamlid, L.Nilsson & D.McGeorge</i>	505
Dynamic modeling of human body and response analysis of vehicle-driver system by using SANDY system <i>Jie Bai, T.Tsuta & Yong Bai</i>	513
Collision and crash penetration analysis by the rigid plastic finite element method <i>T.Tsuta, S.Okamoto & T.Kobayashi</i>	521
The Hybrid III dummy finite element model <i>L.Fredriksson & L.Nilsson</i>	529
New approach to crash-worthiness studies of automotive and aerospace thin sheet metal structures by a large Hopkinson bar method <i>C.Albertini, A.Del Grande, A.Delzano, R.Kiefer, M.Montagnani, M.Murarotto, E.V.Pizzinato, A.Rodis & A.W.Schnabel</i>	539
Dropped objects' plugging capacity of stiffened panels <i>M.Langseth & P.K.Larsen</i>	547
 5 Basic dynamics	
Vibrations of infinite one-dimensional periodic systems by finite element method <i>J.Rakowski</i>	557
A method for the analysis of cables structures with fixed and flexible elastic boundaries <i>C.D.Stefanou & S.E.Moossavi Nejad</i>	563
Dynamic analysis of curved folded plates using finite strips with independent rotation fields <i>Z.Bittnar & B.Patzák</i>	569
Micro-macro dynamics of periodic material structures <i>Cz.Woźniak</i>	573
Identification of parametrical, viscoelastic models for local damping elements in MDOF-systems <i>T.Herrmann, H.J.Pradlwarter, H.H.Priebsch & G.P.Rainer</i>	577
Damping models in finite element computations <i>M.Kaliske, J.Jagus, N.Gebbeken & H.Rothert</i>	585
Implementation of a procedure for identification of finite element models from experimental modal data <i>D.Capecchi, F.Vestroni & E.Antonacci</i>	593
