Contents

Preface v
Acknowledgments x

1. Introduction To Mechanical Vibration 1

1.1 Introduction 2
1.2 Descriptions of Vibrational Motion 3
1.3 Spring Elements 11
1.4 Damping Elements 26
1.5 Parameter Estimation 36
1.6 MATLAB Applications 45
1.7 Chapter Review 48
Problems 48

2. Models with One Degree of Freedom 59

2.1 Kinematics and Degrees of Freedom 60
2.2 Plane Motion of a Rigid Body 67
2.3 Work-Energy Methods 77
2.4 Impulse-Momentum Methods 82
2.5 Equivalent Mass and Inertia 87
2.6 Systems with Spring Elements 96
2.7 Chapter Review 102
Problems 103

3. Free Response with a Single Degree of Freedom 115

3.1 First-Order Response 116
3.2 Free Undamped Vibration 120
3.3 Rayleigh's Method 131
3.4 Free Vibration with Viscous Damping 135
3.5 Analysis of the Characteristic Roots 144
3.6 Stability 155
3.7 Vibration Models with Viscous Damping 160
3.8 Free Vibration with Coulomb Damping 167
3.9 The MATLAB ode Solvers 170
3.10 Introduction to Simulink 174
3.11 Chapter Review 184
Problems 185

4. Harmonic Response with a Single Degree of Freedom 203

4.1 Solution for the Harmonic Response 204
4.2 Resonance and Bandwidth 217

4.3 Base Excitation 225
4.4 Rotating Unbalance 231
4.5 Critical Speeds of Rotating Shafts 234
4.6 Equivalent Damping 237
4.7 Forced Vibration with Coulomb Damping 243
4.8 Nonlinear Response 245
4.9 Frequency Response with MATLAB 253
4.10 Simulink Applications 258
4.11 Chapter Review 268
Problems 269

5. General Forced Response 277

5.1 Response to General Periodic Inputs 278
5.2 The Laplace Transform 288
5.3 Forced Response from the Laplace Transform 294
5.4 Additional Response Examples 310
5.5 Pulse and Impulse Response 325
5.6 MATLAB and the Laplace Transform 336
5.7 MATLAB Applications 339
5.8 Simulink Applications 347
5.9 Chapter Review 349
Problems 350

6. Two-Degrees-of-Freedom Systems 362

6.1 Models of Two-Degree-of-Freedom Systems 363
6.2 Lagrange's Equations 374
6.3 Modes and System Response 378
6.4 Harmonic Response 386
6.5 General Forced Response 389
6.6 Nodes and Modal Response 394
6.7 Root Locus Analysis with MATLAB 399
6.8 Response Analysis with MATLAB 405
6.9 Simulink Applications 410
6.10 Chapter Review 414
Problems 415

7. Vibration Suppression and Control 425

7.1 Acceptable Vibration Levels 426
7.2 Sources of Vibration 430
7.3 Isolator Design for Fixed-Base Systems 433
7.4 Isolation with Base Motion 451
7.5 Dynamic Vibration Absorbers 460
7.6 Active Vibration Control 469
7.7 MATLAB Applications 475

7.8 Chapter Review 477
Problems 478

8. Matrix Methods for Multi-Degree of Freedom Systems 486

8.1 Matrix Form of the Equations of Motion 487
8.2 Mode Shapes and Eigenvalue Problems 498
8.3 Modal Analysis 509
8.4 Effects of Damping 522
8.5 MATLAB Applications 526
8.6 Simulink Applications 536
8.7 Chapter Review 541
Problems 541

9. Vibration Measurement and Testing 554

9.1 System Identification 555
9.2 Transform Analysis of Signals 562
9.3 Random Processes 571
9.4 Spectral Analysis 572
9.5 Data Acquisition and Signal Processing 586
9.6 MATLAB Applications 590
9.7 Simulink Applications 595
9.8 Chapter Review 595
Problems 596

10. Distributed Systems 601

10.1 Introduction 602
10.2 Solution of the Wave Equation 605
10.3 Separation of Variables 609
10.4 Transverse Vibrations of Beams 619
10.5 MATLAB Applications 625
10.6 Chapter Review 628
Problems 629

11. Dynamic Finite Element Analysis 633

11.1 Bar Element 635
11.2 Models with Multiple Bar Elements 640
11.3 Consistent and Lumped-Mass Matrices 644
11.4 Analysis of Trusses 646
11.5 Torsional Elements 657
11.6 Beam Elements 661
11.7 MATLAB Applications 671
11.8 Chapter Review 675
Problems 676

Appendix A Introduction to MATLAB

Appendix A can be found on the following website: http://www.wiley.com/college/palm.

A.1 MATLAB Interactive Sessions
A.2 Computing with MATLAB
A.3 Working with Files
A.4 Operators, Conditional Statements, and Loops
A.5 The MATLAB Help System

Appendix B Numerical Solution Methods 685

Appendix C Mechanical Properties of Common Materials 693

References 695
