

TABLE OF CONTENTS

FREDERICK SMETANA'S PREFACE	7
AUTHOR'S PREFACE	9
Chapter 1. DISCRETE STOCHASTIC PROCESSES AND THEIR SAMPLES FOR MODELLING ENVIRONMENTAL LOADS.....	13
1.1. Basic Properties of Sample Functions.....	13
1.2. Crossings.....	18
1.3. Special Problems.....	22
Chapter 2. DIGITAL SIMULATION OF SAMPLE FUNCTIONS.....	31
2.1. Classification.....	31
2.2. White Noises.....	34
2.3. Processes With Multi Modal Spectral Densities.....	40
Chapter 3. MODELLING ENVIRONMENTAL RANDOMNESS.....	48
3.1. Homogeneous Isotropic Gust Field.....	49
3.2. Modelling Surface Roughness.....	64
3.3. Profile Geometry Randomness.....	72
3.4 Manufacturing Randomness of Wing.....	86
Chapter 4. GUST LOADS MODELLING AND SIMULATION.....	100
4.1. Gust Response Models.....	100
4.2. Spectral Responses.....	116
4.3. Random Functions of Responses.....	117
Chapter 5. GROUND DYNAMICS MODELLING AND SIMULATION... ..	125
5.1. Airplane Drop Test.....	125
5.2. Modelling Airplane Pneumatics.....	134
5.3. Effective Thrust.....	144

Chapter 6. DESIGN APPLICATIONS.	153
6.1. Prototype Modification.	153
6.2. Laboratory Vibration Test.	170
Chapter 7. FATIGUE LIFE.	174
7.1. Physical Background.	174
7.2. Load Patterns and Fatigue.	175
7.3. Fatigue Life of a Wing Panel.	188
7.4. Fatigue Life of a Glider.	190
7.5. Spectral Estimation of the Fatigue Life.	192
Chapter 8. PASSENGER COMFORT.	197
8.1. Human Response to Vibration.	197
8.2. Jacobson Trip Comfort.	203
8.3. Numerical Results.	204
CONCLUSIONS & COMMENTS	210
SELECTED BIBLIOGRAPHY	215
INDEX.	225
