Introduction	1
I Dynamics of Linear, Time Invariant, Systems	23
1 Conservative Discrete Vibrating Systems	25
1.1 Oscillator with a single degree of freedom	25
1.2 Systems with many degrees of freedom	28
1.3 Coefficients of influence and compliance matrix	32
1.4 Lagrange equations	32
1.5 Configuration space	40
1.6 State space	41
1.7 Exercises	46
2 Equations in the Time, Frequency, and Laplace Domains	49
2.1 Equations in the time domain	49
2.2 Equations in the frequency domain	50
2.3 Equations in the Laplace domain	54
2.4 Exercises	57

3	Damped Discrete Vibrating Systems	59
3.1	Linear viscous damping	59
3.2	State-space approach	65
3.3	Rayleigh dissipation function	67
3.4	Structural or hysteretic damping	72
3.5	Non-viscous damping	78
3.6	Structural damping as nonviscous damping	84
3.7	Systems with frequency-dependent parameters	90
3.8	Exercises	92
4	Free Vibration of Conservative Systems	93
4.1	Systems with a single degree of freedom	93
4.2	Systems with many degrees of freedom	97
4.3	Properties of the eigenvectors	99
4.4	Uncoupling of the equations of motion	101
4.5	Modal participation factors	106
4.6	Structural modification	111
4.7	Exercises	113
5	Free Vibration of Damped Systems	115
5.1	Systems with a single degree of freedom– viscous damping	115
5.2	Systems with a single degree of freedom–hysteretic damping	122
5.3	Systems with a single degree of freedom – nonviscous damping	123
5.4	Systems with many degrees of freedom	125
5.5	Uncoupling the equations of motion: space of the configurations	126
5.6	Uncoupling the equations of motion: state space	131
5.7	Exercises	133
6	Forced Response in the Frequency Domain: Conservative Systems	135
6.1	System with a single degree of freedom	135
6.2	System with many degrees of freedom	142
6.3	Modal computation of the response	144
6.4	Coordinate transformation based on Ritz vectors	148
6.5	Response to periodic excitation	151
6.6	Exercises	151
7	Forced Response in the Frequency Domain: Damped Systems	153
7.1	System with a single degree of freedom: steady-state response	153

7.2	System with a single degree of freedom: nonstationary response	160
7.3	System with structural damping	161
7.4	System with many degrees of freedom	163
7.5	Modal computation of the response	165
7.6	Multi-degrees of freedom systems with hysteretic damping	168
7.7	Response to periodic excitation	169
7.8	The dynamic vibration absorber	170
7.9	Parameter identification	175
7.10	Exercises	177
8	Response to Nonperiodic Excitation	179
8.1	Impulse excitation	179
8.2	Step excitation	181
8.3	Duhamel's integral	184
8.4	Solution using the transition matrix	187
8.5	Solution using Laplace transforms	187
8.6	Numerical integration of the equations of motion	189
8.7	Exercises	191
9	Short Account of Random Vibrations	193
9.1	General considerations	193
9.2	Random forcing functions	194
9.3	White noise	197
9.4	Probability distribution	198
9.5	Response of linear systems	199
9.6	Exercises	211
10	Reduction of the Number of Degrees of Freedom	213
10.1	General considerations	213
10.2	Static reduction of conservative models	214
10.3	Guyan reduction	216
10.4	Damped systems	218
10.5	Dynamic reduction	219
10.6	Modal reduction	219
10.7	Component-mode synthesis	220
10.8	Exercises	224
11	Controlled Linear Systems	225
11.1	General considerations	225
11.2	Control systems	227
11.3	Controllability and observability	231
11.4	Open-loop control	232
11.5	Closed-loop control	234
11.6	Basic control laws	237

11.7	Delayed control	246
11.8	Control laws with frequency-dependent gains	248
11.9	Robustness of the controller	253
11.10	State feedback and state observers	253
11.11	Control design	257
11.12	Modal approach to structural control	259
11.13	Exercises	261
12	Vibration of Beams	263
12.1	Beams and bars	263
12.2	Axial behavior of straight bars	265
12.3	Torsional vibrations of straight beams	279
12.4	Flexural vibrations of straight beams: The Euler–Bernoulli beam	280
12.5	Bending in the yz -plane	305
12.6	Coupling between flexural and torsional vibrations of straight beams	306
12.7	The prismatic homogeneous Timoshenko beam	310
12.8	Interaction between axial forces and flexural vibrations of straight beams	314
12.9	Exercises	318
13	General Continuous Linear Systems	321
13.1	Elastic continua	321
13.2	Flexural vibration of rectangular plates	324
13.3	Vibration of membranes	329
13.4	Propagation of elastic waves in taut strings	332
13.5	Propagation of sound waves in pipes	335
13.6	Linear continuous systems with structural damping	337
13.7	Exercises	338
14	Discretization of Continuous Systems	341
14.1	Overview of discretization techniques	341
14.2	The assumed-modes methods	343
14.3	Lumped-parameters methods	349
14.4	Transfer-matrices methods	350
14.5	Holtzer’s method for torsional vibrations of shafts	353
14.6	Myklestad’s method for flexural vibrations of beams	357
14.7	Exercises	360
15	The Finite Element Method	363
15.1	Element characterization	363
15.2	Timoshenko beam element	367
15.3	Mass and spring elements	376
15.4	Plate element: Kirchhoff formulation	377
15.5	Plate element: Mindlin formulation	380

15.6	Brick elements	382
15.7	Isoparametric elements	384
15.8	Some considerations on the consistent mass matrix	387
15.9	Assembling the structure	388
15.10	Constraining the structure	390
15.11	Dynamic stiffness matrix	393
15.12	Damping matrices	395
15.13	Finite elements in time	396
15.14	Exercises	399
16	Dynamics of Multibody Systems	401
16.1	General considerations	401
16.2	Lagrange equations in terms of pseudo-coordinates	407
16.3	Motion of a rigid body	411
16.4	Exercises	420
17	Vibrating Systems in a Moving Reference Frame	421
17.1	General considerations	421
17.2	Vibrating system on a rigid carrier	426
17.3	Lumped-parameters discretization	430
17.4	Modal discretization	436
17.5	Planar systems	441
17.6	Beam attached to a rigid body: planar dynamics	442
17.7	The rotating beam	445
17.8	Exercises	446
II	Dynamics of Nonlinear and time Variant Systems	449
18	Free Motion of Conservative Nonlinear Systems	451
18.1	Linear versus nonlinear systems	451
18.2	Equation of motion	452
18.3	Free oscillations	456
18.4	Direct integration of the equations of motion	458
18.5	Harmonic balance	463
18.6	Ritz averaging technique	466
18.7	Iterative techniques	469
18.8	Perturbation techniques	471
18.9	Solution in the state plane	475
18.10	Exercises	478
19	Forced Response of Conservative Nonlinear Systems	481
19.1	Approximate evaluation of the response to a harmonic forcing function	481
19.2	Undamped Duffing's equation	483

19.3	Conclusions	496
19.4	Exercises	498
20	Free Motion of Damped Nonlinear Systems	501
20.1	Nonlinear damping	501
20.2	Motion about an equilibrium position (in the small) . . .	503
20.3	Direct integration of the equation of motion	504
20.4	Equivalent damping	508
20.5	Solution in the state plane	509
20.6	Stability in the small	512
20.7	The Van der Pol oscillator	514
20.8	Exercises	516
21	Forced Response of Damped Nonlinear Systems	519
21.1	Reduction of the size of the problem	519
21.2	First approximation of the response to a harmonic forcing function	521
21.3	Duffing's equation with viscous damping	525
21.4	Duffing's equation with structural damping	528
21.5	Backbone and limit envelope	529
21.6	Multiple Duffing equations	534
21.7	Approximated sub- and super-harmonic response	539
21.8	Van der Pol method: stability of the steady-state solution	541
21.9	Strongly nonlinear systems	545
21.10	Poincaré mapping	546
21.11	Chaotic vibrations	550
21.12	Exercises	555
22	Time Variant and Autoparametric Systems	557
22.1	Linear time-variant systems	557
22.2	Hill's equation	559
22.3	Pendulum on a moving support: Mathieu equation	560
22.4	The elastic pendulum	566
22.5	Autoparametric systems	569
22.6	Exercises	575
III	Dynamics of Rotating and Reciprocating Machinery	577
23	Elementary Rotordynamics:	
	The Jeffcott Rotor	579
23.1	Elementary rotordynamics	579
23.2	Vibrations of rotors: the Campbell diagram	581

23.3	Forced vibrations of rotors: critical speeds	584
23.4	Fields of instability	587
23.5	The undamped linear Jeffcott rotor	590
23.6	Jeffcott rotor with viscous damping	596
23.7	Jeffcott rotor with structural damping	606
23.8	Equations of motion in real coordinates	608
23.9	Stability in the supercritical field	608
23.10	Acceleration through the critical speed	610
23.11	Exercises	614
24	Dynamics of Multi-Degrees-of-Freedom Rotors	615
24.1	Model with 4 degrees of freedom: gyroscopic effect	615
24.2	Rotors with many degrees of freedom	630
24.3	Real versus complex coordinates	634
24.4	Fixed versus rotating coordinates	636
24.5	State-space equations	637
24.6	Static solution	637
24.7	Critical-speed computation	638
24.8	Unbalance response	639
24.9	Campbell diagram and roots locus	640
24.10	Acceleration of a torsionally stiff rotor	641
24.11	Exercises	645
25	Nonisotropic Rotating Machines	647
25.1	Jeffcott rotor on nonisotropic supports	648
25.2	Nonisotropic Jeffcott rotor	652
25.3	Secondary critical speeds due to rotor weight	656
25.4	Equation of motion for an anisotropic machine	657
25.5	Exercises	670
26	Nonlinear Rotors	671
26.1	General considerations	671
26.2	Nonlinear Jeffcott rotor: equation of motion	672
26.3	Unbalance response	673
26.4	Free circular whirling	676
26.5	Stability of the equilibrium position	678
26.6	Exercises	688
27	Dynamic Problems of Rotating Machines	689
27.1	Rotors on hydrodynamic bearings	689
27.2	Dynamic study of rotors on magnetic bearings	706
27.3	Flexural vibration dampers	723
27.4	Signature of rotating machinery	728
27.5	Exercises	732

28 Rotor Balancing	733
28.1 General considerations	733
28.2 Rigid rotors	734
28.3 Flexible rotors	737
28.4 Exercises	744
29 Torsional Vibration of Crankshafts	745
29.1 Specific problems of reciprocating machines	745
29.2 Equivalent system for the study of torsional vibrations . .	746
29.3 Computation of the natural frequencies	758
29.4 Forced vibrations	762
29.5 Torsional instability of crank mechanisms	784
29.6 Exercises	787
30 Vibration Control in Reciprocating Machines	789
30.1 Dissipative dampers	789
30.2 Damped vibration absorbers	793
30.3 Rotating-pendulum vibration absorbers	796
30.4 Experimental measurement of torsional vibrations	799
30.5 Axial vibration of crankshafts	800
30.6 Short outline on balancing of reciprocating machines . . .	801
30.7 Exercises	805
A Solution Methods	807
A.1 General considerations	807
A.2 Solution of linear sets of equations	808
A.3 Computation of eigenfrequencies	812
A.4 Solution of nonlinear sets of equations	822
A.5 Numerical integration in time of the equation of motion .	824
B Laplace Transform Pairs	831
Index	849
