

Contents

1	Steady-State Solutions	1
1.1	Systems	1
1.1.1	Autonomous continuous-time dynamical systems . .	1
1.1.2	Non-autonomous continuous-time dynamical systems	2
1.1.3	Relationship between autonomous and non-autonomous systems	2
1.1.4	Useful facts regarding continuous-time dynamical systems	3
1.1.5	Discrete-time systems	4
1.2	Limit sets	4
1.2.1	Equilibrium points	6
1.2.2	Periodic solutions	8
1.2.3	Quasi-periodic solutions	13
1.2.4	Chaos	18
1.2.5	Predictive power	24
1.3	Summary	28
2	Poincaré Maps	31
2.1	Definitions	31
2.1.1	The Poincaré map for non-autonomous systems . . .	31
2.1.2	The Poincaré map for autonomous systems	32
2.2	Limit Sets	35
2.2.1	Equilibrium points	35
2.2.2	Periodic solutions	36
2.2.3	Quasi-periodic solutions	37
2.2.4	Chaos	40
2.3	Higher-order Poincaré maps	43
2.4	Algorithms	47
2.4.1	Choosing the hyperplane Σ	47
2.4.2	Locating hyperplane crossings	48
2.5	Summary	55

3	Stability	57
3.1	Eigenvalues	59
3.2	Characteristic multipliers	61
3.2.1	Characteristic multipliers	61
3.2.2	Characteristic multipliers and the variational equation	64
3.2.3	Characteristic multipliers and equilibrium points	66
3.3	Lyapunov exponents	66
3.3.1	Definition	67
3.3.2	Lyapunov exponents of an equilibrium point	67
3.3.3	Lyapunov numbers of a fixed point	68
3.3.4	Perturbation subspaces	69
3.3.5	Lyapunov exponents of non-chaotic limit sets	70
3.3.6	Lyapunov exponents of chaotic attractors	71
3.4	Algorithms	71
3.4.1	Eigenvalues at an equilibrium point	71
3.4.2	Characteristic multipliers	73
3.4.3	Lyapunov exponents	73
3.5	Summary	81
4	Integration	83
4.1	Types	83
4.2	Integration error	92
4.2.1	Local errors	92
4.2.2	Global errors	95
4.2.3	Numerical stability	97
4.3	Stiff equations	99
4.4	Practical considerations	104
4.4.1	Variable step-size and order	105
4.4.2	Output points	106
4.4.3	Solving implicit equations	107
4.4.4	Error considerations	109
4.4.5	Integrating chaotic systems	110
4.4.6	Start-up costs	112
4.5	Summary	112
5	Locating Limit Sets	115
5.1	Introduction	115
5.1.1	Brute-force approach	115
5.1.2	Newton-Raphson approach	116
5.2	Equilibrium points	116
5.3	Fixed points	117
5.4	Closed orbits	118
5.5	Periodic solutions	118
5.5.1	The non-autonomous case	119

5.5.2	The autonomous case	120
5.6	Two-periodic solutions	131
5.6.1	Finite differences	131
5.6.2	Spectral balance	134
5.7	Chaotic solutions	136
5.8	Summary	137
6	Manifolds	139
6.1	Definitions and theory	139
6.1.1	Continuous-time systems	139
6.1.2	Discrete-time systems	145
6.2	Algorithms	150
6.2.1	Continuous-time systems	150
6.2.2	Discrete-time systems	154
6.3	Summary	165
7	Dimension	167
7.1	Dimension	167
7.1.1	Definitions	168
7.1.2	Algorithms	179
7.2	Reconstruction	191
7.3	Summary	197
8	Bifurcation Diagrams	201
8.1	Definitions	201
8.2	Algorithms	210
8.2.1	Brute force	210
8.2.2	Continuation	222
8.3	Summary	234
9	Programming	237
9.1	The user interface	237
9.1.1	The dynamical system interface	238
9.1.2	The program initialization interface	242
9.1.3	The interactive interface	243
9.2	Languages	247
9.2.1	Modular design	249
9.3	Library definitions	252
9.3.1	RKF—Runge-Kutta-Fehlberg integration	253
9.3.2	PARSE—input parsing routines	257
9.3.3	BINFILE—binary data files	260
9.3.4	GRAF—graphics	261

10 Phase Portraits	269
10.1 Trajectories	270
10.1.1 Selection of initial conditions	270
10.1.2 Calculating the trajectory	272
10.1.3 Arrowheads	274
10.1.4 Drawing the vector field	276
10.2 Limit sets	277
10.2.1 Equilibrium points	278
10.2.2 Limit cycles	279
10.2.3 Index	280
10.3 Basins	281
10.3.1 Definitions	281
10.3.2 Examples	284
10.3.3 Calculating boundaries of basins of attraction	291
10.4 Programming tips	296
10.4.1 Consistency checking	296
10.4.2 History files	297
10.5 Summary	299
A The Newton-Raphson Algorithm	301
B The Variational Equation	305
C Differential Topology	307
C.1 Differential topology	307
C.2 Structural stability	310
D The Poincaré Map	315
E One Lyapunov Exponent Vanishes	321
F Cantor Sets	323
G List of Symbols	329
Bibliography	333
Index	341
