<i>Useful Constants</i>	xiii
<i>Conversion Tables</i>	xv
CHAPTER 1 ELECTROMAGNETIC FIELD EQUATIONS	
1.1 Electromagnetic Field Equations	1
1.2 General Properties of Material Media	5
1.2.1 The Equations of Poisson and Laplace	6
1.2.2 Example Using the Equations of Poisson and Laplace	8
1.2.3 Electrostatic Energy Relations	9
1.2.4 Magnetostatic Energy Relations	12
1.2.5 Energy Associated with a Magnetic Material in a Magnetostatic Field	14
1.2.6 Current Elements and Permanent Magnets	16
1.3 Dielectric Insulating Media	18
1.3.1 Electric Polarization	19
1.3.2 Polarization, the Electric Displacement and the Electric Field	21
1.3.3 Harmonic Time Functions	24
1.3.4 Complex Electric Susceptibility and Dielectric Constant	25
1.3.5 Examples	27
1.3.6 Kramers-Kronig Relations	28
1.3.7 Power Loss in a Dielectric	31
1.4 Magnetic Media	34
1.4.1 Magnetization Field	34
1.4.2 Magnetization and the Moment per Unit Volume	36
1.4.3 The Magnetic Induction Field	37
1.4.4 Digression on Magnetic Poles	37
1.4.5 Magnetic Permeability and Magnetic Susceptibility	38
1.4.6 Power Loss in a Magnetic Material	40
1.4.7 Magnetic Hysteresis	41
1.5 Conducting Media	42
1.5.1 Ohm's Law	43
1.5.2 Electromotive Force	45
1.5.3 Explicitly Time-Dependent Electromotive Force	49
1.5.4 Power Loss for Harmonic Time Functions	50
Bibliography	51
Table of Useful Mathematical Relations	51
Problems	54
CHAPTER 2 ELECTROMAGNETIC WAVES	57
2.1 Introduction	57
2.2 Coupled Field Equations	58

2.3	Plane Waves	60
2.3.1	Field Vectors in a Harmonic Plane Wave	64
2.3.2	Plane Waves in a Conducting Medium	65
2.4	Spherical Waves	67
2.5	Boundary Conditions for the Field Vectors	71
2.6	Reflection and Refraction of Plane Waves	74
2.6.1	Fresnel's equations	77
2.7	Poynting Vector	78
2.7.1	Time Average of the Poynting Vector and the Wave Impedance	80
2.7.2	Complex Poynting Vector	81
2.8	Group Velocity	83
2.9	Rectangular Waveguide and the Coaxial Transmission Line	86
2.9.1	Rectangular Waveguide	86
2.9.2	Transverse Electric Modes	87
2.9.3	Transverse Magnetic modes	90
2.9.4	Coaxial Transmission Line	91
2.10	Reflection Coefficient at Normal Incidence	96
2.11	Scalar and Vector Potentials	98
2.11.1	Formal Solutions for the Vector and Scalar Potentials	102
2.12	Radiation from an Oscillating Dipole	104
2.12.1	The Near Zone	107
2.12.2	The Radiation Zone	107
2.12.3	Energy Flow in the Radiation Zone	108
2.12.4	The Harmonic Electric Dipole	109
	Bibliography	110
	Problems	110
CHAPTER 3	INTRODUCTORY NETWORK ANALYSIS	113
3.1	Circuit Elements	113
3.2	Formal Network Theory	115
3.3	Loop or Mesh Analysis	117
3.3.1	Examples Using Loop Analysis	118
3.3.2	Natural Frequencies and Resonance Frequencies	120
3.4	Node Analysis	122
3.4.1	Example Using Node Analysis	125
3.4.2	Natural Frequencies	126
3.5	Comparison of Loop and Node Analysis	126
3.6	Signal Flow Graphs	127
3.6.1	Examples	131
3.7	Driving Point Impedance and Admittance Functions	133
3.7.1	Natural and Resonance Frequencies	134
3.7.2	Example	135
3.8	Power Dissipation in a Network	136
3.8.1	Complex Power Function	138
3.8.2	Resonance from Unity Power Factor	138
	Appendix	139

Bibliography	140
Problems	140
CHAPTER 4 REPRESENTATION OF SIGNALS	143
4.1 Classes of Signal	143
4.1.1 Periodic, Aperiodic Signals	143
4.1.2 Random, Non-random Signals	143
4.1.3 Energy, Power Signals	144
4.1.4 Singularity Functions	144
4.2 Representation by Means of Fourier Series	147
4.2.1 Orthogonal Function Representation	148
4.2.2 Finite Sum Representation	149
4.2.3 Fourier Series	151
4.2.4 Examples of Orthogonal Function Expansions	152
4.3 Fourier and Laplace Transforms	154
4.3.1 Fourier Transforms	155
4.3.2 The Dirichlet Condition	156
4.3.3 Laplace Transforms	157
4.3.4 Existence of the Laplace Transform	158
4.3.5 Evaluation of Laplace Transforms	158
4.4 Representation in Terms of Spectral Density and Correlation Functions	160
4.4.1 Periodic Signals	160
4.4.2 Power Spectral Density	160
4.4.3 Energy Spectral Density	161
4.4.4 Correlation Functions	162
4.4.5 Auto-correlation Function for a Periodic Signal	163
4.4.6 Spectral Density	164
4.4.7 Properties of Spectral Density Functions	164
4.4.8 Properties of Correlation Functions	166
4.4.9 Thermal Noise	167
4.4.10 Periodic signal in the Presence of Noise	169
4.4.11 Ergodic Processes	170
4.5 Summary	173
Bibliography	174
Tables of Transforms	174
Problems	179
CHAPTER 5 LINEAR SYSTEMS	183
5.1 General Discussion of Linear Systems	183
5.1.1 Linear Differential Equation	183
5.1.2 Discrete Parameter, Time Invariant, Linear Systems	184
5.1.3 Linear Integral Equation	184
5.1.4 Laplace and Fourier Transform Solutions	187
5.1.5 Transfer Function	189
5.1.6 Transform Network	189
5.2 Properties of Transfer Functions	192
5.2.1 Transfer Functions for Realizable, Stable Systems	194

5.2.2	Location of Poles for a Transfer Function	199
5.2.3	Particular Transfer Functions	205
5.2.4	Real and Imaginary Parts	207
5.2.5	Amplitude Transfer Function and Linear Filters	210
5.2.6	Particular Amplitude Transfer Functions for Linear Filters	213
5.2.7	Frequency Transformations	218
5.3	Operational Amplifier with Feedback	220
5.3.1	An Integrating Circuit	221
5.3.2	Voltage Feedback with a Practical Operational Amplifier	223
5.3.3	Current Feedback with a Practical Operational Amplifier	225
5.4	Optimum Linear Systems	227
5.4.1	Excitation by a Random Signal	227
5.4.2	Maximum Signal to Noise Ratio—The Matched Filter	230
5.4.3	Minimum Mean Square Error Filter	233
5.4.4	Examples of Optimum Linear Networks	238
5.4.5	Thermal Noise	240
	Bibliography	244
	Operational Amplifier Circuit Configurations	244
	Problems	247
CHAPTER 6	TWO-PORT NETWORKS	252
6.1	Coupling Matrices	252
6.1.1	Admittance and Impedance Matrices	253
6.1.2	Transfer Matrices	254
6.1.3	Hybrid Parameter Matrices	255
6.1.4	Relations between the Matrix Elements	256
6.2	Interconnection of Two-Port Networks	256
6.2.1	Series Connection	256
6.2.2	Parallel Connection	258
6.2.3	Series-Parallel Connection	260
6.2.4	Parallel-Series connection	261
6.2.5	Examples of Brune's Tests	261
6.2.6	Interconnection of Two-Port Networks Using Trans- formers	264
6.2.7	Cascade Connection	265
6.2.8	Two Examples	266
6.3	Reversible Two-Port Networks	273
6.4	Two-Port Network as a Matching Element	275
6.4.1	Optimum Noise Figure	277
6.5	Equivalent Circuits for Two-Port Networks	279
6.5.1	The T Representation	279
6.5.2	The π Representation	281
6.5.3	The Lattice Representation	281
6.6	Matrix for a Realizable Two-Port	283
6.6.1	Introduction to Synthesis Using Lattice Networks	285
6.7	Infinite Series of Identical Two-Ports in Cascade	290
6.7.1	The Pass Band	293

6.7.2 Attenuation outside the Pass Band	294
6.7.3 Characteristics of Simple Filters	294
6.7.4 Two-Ports in Cascade as a Transmission Line	297
6.8 Summary	300
Bibliography	301
Problems	301
CHAPTER 7 MICROSCOPIC THEORY OF THE DIELECTRIC CONSTANT	307
7.1 Introduction	307
7.2 Classical Theory of Non-polar Materials	307
7.2.1 Gases	308
7.2.2 Insulating Liquids and Solids	310
7.2.3 Metals	313
7.3 Classical Theory of Polar Molecules	315
7.3.1 Polar Gases	316
7.3.2 Polar Liquids and Solids	317
7.4 Quantum Theory of the Dielectric Constant	322
7.4.1 Time Dependent Perturbation Theory	322
7.4.2 The Hamiltonian for a Particle in an Electromagnetic Field	325
7.4.3 Induced Moments	326
7.5 Optical Rotation Phenomena	334
7.5.1 Natural Optical Activity	336
7.5.2 Faraday Rotation	340
7.5.3 Examples on Faraday Rotation	347
7.6 Lattice Waves and the Dielectric Constant	353
7.6.1 Mechanical Vibrations	353
7.6.2 Coupled Waves	355
7.6.3 Reflection Coefficient	362
7.6.4 Ferroelectric Transition	363
Bibliography	364
CHAPTER 8 THE MICROSCOPIC THEORY OF MAGNETIC MATERIALS	365
8.1 Introduction	365
8.2 Diamagnetism and Paramagnetism in Insulators	365
8.2.1 Diamagnetic Susceptibility	367
8.2.2 Paramagnetic Susceptibility	368
8.2.3 Total Susceptibility	372
8.2.4 Second Order Paramagnetic Terms	372
8.2.5 Brillouin Function	373
8.2.6 Special Case $\langle L_z \rangle = 0$	374
8.2.7 A Generalization	377
8.3 The Molecular Field	382
8.3.1 Spontaneous Magnetization	383
8.3.2 Spontaneous Magnetization for $T < \theta$	387
8.3.3 Antiferromagnetism on the Molecular Field Model	389
8.3.4 Néel Temperature (Axial Magnetization)	390
8.3.5 Susceptibility below T_N (Axial Magnetization)	391

8.3.6	Antiferromagnetic Spiral	394
8.3.7	Néel Temperature (Antiferromagnetic Spiral)	397
8.3.8	Susceptibility below T_N (Antiferromagnetic Spiral)	398
8.4	Exchange Interaction	404
8.4.1	Ruderman-Kittel-Kasuya-Yosida Interaction	407
8.4.2	An Introduction to the Wave-Vector Dependence of the Susceptibility	410
8.5	Spin Waves	414
8.5.1	Annihilation and Creation Operator Representation	418
8.5.2	Low Temperature Magnetization	422
8.6	Demagnetizing Fields	423
8.6.1	Uniform Magnetization	423
8.6.2	The Spin Wave Field	426
8.6.3	Walker Modes	427
8.7	Electromagnetic Waves in a Magnetized Material	427
8.7.1	Torque Equation	429
8.7.2	Propagation through a Magnetized Disk	431
8.7.3	Resonance Frequency from the Torque Equation	435
8.8	Frequency of Uniform Precession from Lagrange's Equations	436
8.9	Itinerant Electrons	441
8.10	Domains in Ferromagnetic Materials	445
8.10.1	Domain Width	446
8.10.2	Domain Wall	448
	Bibliography	450
CHAPTER 9	ELECTRICAL CONDUCTION IN SOLIDS	451
9.1	Introduction	451
9.2	Electrons in a Periodic Potential	452
9.2.1	The Brillouin Zone	454
9.2.2	The Fermi Surface	462
9.2.3	Electron Velocity, Acceleration and Effective Mass	465
9.2.4	$\mathbf{k}, \mathbf{p}$ Perturbation Theory	469
9.3	Electrical Conductivity	472
9.3.1	Current Density	473
9.3.2	Relaxation Time	478
9.3.3	Lattice Scattering—the Deformation Potential	482
9.3.4	Ionized Impurity Scattering	485
9.4	Electrical Conduction in a Magnetic Field	487
9.4.1	Magnetoresistance and the Hall Effect	489
9.4.2	Boltzmann Transport Equation	494
9.4.3	Cyclotron Resonance	496
9.4.4	Anomalous Skin Effect	500
9.4.5	Elementary Quantum Theory	504
	Bibliography	509
	<i>Index</i>	511
