

CONTENTS

1. Dynamics	6
1.1. Introduction	6
1.2. Historical Perspective	6
1.3. Newton's Laws	8
2. Stability of Equilibrium	10
3. Materials	14
3.1. Strength of Materials	14
3.1.1. Elasticity	14
3.1.2. Hooke's Law	15
3.3. Mechanical Properties	17
3.4. Interatomic Attractions	18
3.5. Metallic Bonds	18
3.6. Phases	19
3.7. Crystals	20
3.7.1. Diffraction	20
3.7.2. Imperfections in Crystals	20
3.8. Melting	21
3.9. Single-Phase Microstructure	21
3.10. Grain Growth	22
3.11. Elastic Deformation	22
3.12. Thermal Conductivity	23
3.13. Reaction Rates	23
3.14. Phase Changes without Compositional Changes	24
3.15. Nucleation of Phase Changes	24
3.15.1. Homogeneous Nucleation	24
3.15.2. Heterogeneous Nucleation	25
3.16. Microstructural Geometry	25
3.17. Distribution	27
3.18. Composite Materials	27
4. Cutting Fluids	28
4.1. Introduction	28
4.2. Why Use a Cutting Fluid?	28
4.3. The Basic Cutting Operation	29
4.4. Cutting Fluids Action	30

4.5. Cutting Fluids Classified	32
4.6. Choice of Cutting Fluid	34
4.7. Application of Cutting Fluids	39
4.8. Workshop Hygiene	40
5. Gas Turbine Theory	43
5.1. Open Cycle Single Shaft Arrangement	46
5.2. Open Cycle with Separate Power Turbine	47
5.3. Use of Intercooling	48
5.4. Use of Reheat	49
5.5. Compounding	50
5.6. Closed Cycles	51
5.7. Special Applications	53
6. Some Notes on Gas Dynamics	55
6.1. Compressibility Effects	55
7. Rocket Motors	61
7.1. The Combustion Process	62
7.2. Time Lag and Space Lag	64
7.3. Rough Combustion and Unstable Combustion	66
8. Wood Pulp Section	70
8.1. Introduction	70
8.2. Wood Pulps	71
8.3. Trees	71
8.4. Varieties of Wood Pulp Made	72
8.5. Preparation for Pulping	72
8.6. Effects of Conditions of Grinding	74
8.7. Properties and Uses of Groundwood	75
8.8. Refiner Groundwood	75
8.9. Sequences of Operations in Refiner - Mechanical Production from Chips by Defibrator Method	76
8.10. Thermo-Mechanical Pulping	77
9. Paper Machines	78
9.1. Types of Paper Machines	78
9.1.1. Fourdrinier Machines	78
9.1.2. Yankee Machines	80
9.1.3. Cylinder Machines	81
9.2. Paper Machine Bearing Lubrication	81
9.2.1. Hypotheses	85
9.2.2. Investigations and Observations	85
9.2.3. Measurement of Variation of Oil Temperature with Flow	88

9.3. Lubrication Practices	88
9.4. Conclusions	89
9.5. Action Taken	89
10. Metal Cutting Machine Tools	92
10.1. Working and Auxiliary Motions in Machine Tools	92
10.2. Primary Cutting Motion in Machine Tools	93
10.3. Metal Cutting Lathes	94
10.4. Engine Lathes	95
10.4.1. Construction, Arrangement and Principal Units of Engine Lathes	95
10.4.2. Automatic and Semiautomatic Lathes	95
10.5. Cam Drives and Groups of Automatics	96
10.6. Boring Machines	98
10.6.1. Horizontal Boring Machines	98
10.7. Unit-Built Machine Tools	99
10.8. Milling Machines	100
10.9. Planers, Shapers and Slotters	101
10.10. Grinding Machines	101
10.11. Gear-Cutting Machines	102
10.11.1. Classification of Gear-Cutting Machines	104
11. Vehicles	105
11.1. Development of the Tractor	105
11.2. Thermodynamic Principles of Internal-Combustion Engines	106
11.2.1. Internal-Combustion Engine Cycles	106
11.2.2. Fuels and Combustion	107
11.3. Design of Spark-Ignition Engines	108
11.4. Carburetor Adjustment	109
11.5. Spark-Ignition Systems and Electrical Equipment	110
11.6. Lubrication and Lubrication Systems	111
11.7. Compression Diesel Engines for Tractors	112
11.8. Engine Cooling and Cooling Systems	113
11.9. Tractor Performance Criteria	114
11.10. Power Measurement Methods	115
11.11. Injuries and the Windscreen	116
11.12. Vehicle Lighting	117
11.13. The Braking Performance of Vehicles	119
Vocabulary	121
Bibliography	143
