Part I Interior Ballistics

Chapter 1 Introductory Concepts 3
1.1 Ballistic Disciplines..... 4
1.2 Terminology 4
1.3 Units and Symbols..... 5
Chapter 2 Physical Foundation of Interior Ballistics 7
2.1 The Ideal Gas Law 7
2.2 Other Gas Laws 14
2.3 Thermophysics and Thermochemistry 14
2.4 Thermodynamics 19
2.5 Combustion..... 24
2.6 Solid Propellant Combustion..... 34
2.7 Fluid Mechanics 43
References..... 61
Chapter 3 Analytic and Computational Ballistics 63
3.1 Computational Goal 63
3.2 Lagrange Gradient..... 64
3.3 Chambrage Gradient 88
3.4 Numerical Methods in Interior Ballistics 90
3.5 Sensitivities and Efficiencies 94
References..... 96
Chapter 4 Ammunition Design Practice 97
4.1 Stress and Strain 97
4.2 Failure Criteria..... 100
4.3 Ammunition Types..... 104
4.4 Propellant Ignition..... 104
4.5 The Gun Chamber 105
4.6 Propellant Charge Construction 106
4.7 Propellant Geometry 107
4.8 Cartridge Case Design..... 108
4.9 Projectile Design 110

4.10	Shell Structural Analysis	111
4.11	Buttress Thread Design	129
4.12	Sabot Design	136
	References.....	142
	Further Reading	143

Chapter 5	Weapon Design Practice	145
5.1	Fatigue and Endurance.....	145
5.2	Tube Design	147
5.3	Gun Dynamics	153
5.4	Muzzle Devices and Associated Phenomena	158
	Gun Dynamics Nomenclature	165
	References.....	166
	Further Reading	166

Part II Exterior Ballistics

Chapter 6	Introductory Concepts	169
	References.....	178
	Further Reading	178

Chapter 7	Dynamics Review.....	179
	Reference	193
	Further Reading	194

Chapter 8	Trajectories	195
8.1	Vacuum Trajectory	195
8.2	Simple Air Trajectory (Flat Fire).....	202
8.3	Wind Effects on a Simple Air Trajectory.....	211
8.4	Generalized Point Mass Trajectory.....	221
8.5	Six Degree-of-Freedom (6-DOF) Trajectory	230
8.6	Modified Point Mass Trajectory.....	246
	References.....	256
	Further Reading	256

Chapter 9	Linearized Aeroballistics	257
9.1	Linearized Pitching and Yawing Motions.....	259
9.2	Gyroscopic and Dynamic Stabilities.....	269
9.3	Yaw of Repose.....	274
9.4	Roll Resonance	274
	References.....	277

Chapter 10	Mass Asymmetries	279
	References.....	280

Chapter 11	Lateral Throwoff	283
11.1	Static Imbalance.....	286
11.2	Dynamic Imbalance	287
	References.....	291

Chapter 12 Swerve Motion	293
12.1 Aerodynamic Jump.....	293
12.2 Epicyclic Swerve	296
12.3 Drift	298
Reference	298

Chapter 13 Nonlinear Aeroballistics	299
13.1 Nonlinear Forces and Moments.....	299
13.2 Bilinear and Trilinear Moments.....	302
References.....	305

Part III Terminal Ballistics

Chapter 14 Introductory Concepts	309
---	-----

Chapter 15 Penetration Theories	313
15.1 Penetration and Perforation of Metals	313
15.2 Penetration and Perforation of Concrete.....	330
15.3 Penetration and Perforation of Soils.....	336
15.4 Penetration and Perforation of Ceramics	342
15.5 Penetration and Perforation of Composites	349
References.....	351

Chapter 16 Shock Physics	353
16.1 Shock Hugoniot.....	353
16.2 Rarefaction Waves	370
16.3 Stress Waves in Solids	391
16.4 Detonation Physics	408
References.....	426
Further Reading	426

Chapter 17 Introduction to Explosive Effects	429
17.1 Gurney Method.....	429
17.2 Taylor Angles.....	432
17.3 Mott Formula	437
References.....	443
Further Reading	443

Chapter 18 Shaped Charges	445
18.1 Shaped Charge Jet Formation	447
18.2 Shaped Charge Jet Penetration	455
References.....	466
Further Reading	466

Chapter 19 Wound Ballistics	467
References.....	472
Further Reading	472

Appendix..... 473

A. Glossary 473

B. Tabulated Properties of Materials 480

Further Reading 485

Index 487
