

Contents

CHAPTER 1 – THE DETONATION WAVE	
1.1 Steady-State Detonations	1
1.2 Resolved Reaction Zone Detonations in One Dimension	4
1.3 Two-Dimensional Reaction Zones of Homogeneous Explosives	18
1.4 Discussion of Reaction Zones of Homogeneous Explosives	21
1.5 Three-Dimensional Reaction Zones of Heterogeneous Explosives	22
CHAPTER 2 – PERFORMANCE OF EXPLOSIVES AND PROPELLANTS	
2.1 Steady-State Detonations	31
2.2 Nonideal Detonations	64
2.3 Nonsteady-State Detonations	90
2.4 Nitrogen Oxide	114
2.5 Carbon Condensation	118
2.6 CNO Explosives	124
2.7 Density	125
2.8 Propellant Performance	126
2.9 Russian Nonsteady-State Detonation Studies	130
2.10 Craig Decay Zones	138
2.11 Conclusions	139
CHAPTER 3 – INITIATION OF DETONATION	
3.1 Thermal Initiation	146
3.2 Shock Initiation of Homogeneous Explosives	155
3.3 Shock Initiation of Heterogeneous Explosives	172
CHAPTER 4 – MODELING INITIATION OF HETEROGENEOUS EXPLOSIVES	
4.1 The Forest Fire Model	200
4.2 Heterogeneous Detonations	209
4.3 Desensitization by Preshocking	223
4.4 Projectile Initiation of Explosives	230
4.5 Burning to Detonation	237
CHAPTER 5 – INTERPRETATION OF EXPERIMENTS	
5.1 Plane-Wave Experiments	248
5.2 Explosions in Water	251
5.3 The Plate Dent Experiment	261
5.4 The Cylinder Test	265
5.5 Jet Penetration of Inerts and Explosives	268
5.6 Plane Wave Lens	278
5.7 Regular and Mach Reflection of Detonation Waves	281
5.8 Insensitive High Explosive Initiators	289

CHAPTER 6 – NOBEL AND PRad	
6.1 Fifty Year History	307
6.2 The NOBEL Code	308
6.3 Proton Radiography (PRad)	311
6.4 Colliding Diverging PBX-9502 Detonations	314
6.5 Explosively Generated Water Cavities	323
6.6 Munroe Jets	337
6.7 NOBEL Explosive Build-Up	346
6.8 Shaped Charge Jet Formation and Penetration	364
6.9 Hydrovolcanic Explosions	366
6.10 Summary	369

APPENDICES

Appendix A. Numerical Solution of One-Dimensional Lagrangian Reactive Flow	373
Appendix B. Numerical Solution of Two-Dimensional Lagrangian Reactive Flow	391
Appendix C. Numerical Solution of Two-Dimensional Eulerian Reactive Flow	403
Appendix D. Numerical Solution of Three-Dimensional Eulerian Reactive Flow	441
Appendix E. Numerical Solution of Explosive and Propellant Properties using the BKW Equation of State	453
Appendix F. Equations for Computing Thermodynamic Functions of Gases and Solids	485
Appendix G. General Derivation of Flow Equations	493
AUTHOR INDEX	501
SUBJECT INDEX	509
CD-ROM Contents	523
