Series Preface.....	xv
Preface.....	xvii
Series Editor.....	xxiii
Authors.....	xxv

PART I *Vibration Systems*

Chapter 1	Free and Harmonic Vibration of Single-Degree-of-Freedom Systems.....	3
1.1	Model of Linear SDOF Vibration Systems	3
1.1.1	Equation of Motion and Basic Dynamic Parameters.....	3
1.1.1.1	Equilibrium of Vibration Forces.....	3
1.1.1.2	Basic Parameters of the Physical Model.....	5
1.1.1.3	Characteristic Equation and Modal Model.....	7
1.1.2	Homogeneous Solution, Free-Decay Vibration, and the Response Model	11
1.1.3	Forced Vibration with Harmonic Excitation.....	16
1.1.3.1	Steady-State Response.....	16
1.1.3.2	Method of Complex Response for Steady-State Displacement	18
1.1.3.3	Response of Harmonic Excitation with Zero Initial Condition	19
1.1.3.4	Responses with Nonzero Initial Conditions	23
1.1.4	Ground Excitation	24
1.1.4.1	Governing Equation.....	24
1.1.4.2	Responses of Harmonic Ground Excitations.....	26
1.2	Dynamic Magnification.....	29
1.2.1	Dynamic Magnification Factor, General Excitation	30
1.2.1.1	Dynamic Magnification Factor of Displacement.....	30
1.2.1.2	Dynamic Magnification Factor of Acceleration	32
1.2.1.3	Peak Values of Dynamic Magnification Factors	33
1.2.1.4	Dynamic Magnification Factors Reaching Unity	35
1.2.1.5	Half-Power Points and Resonant Region.....	36
1.2.1.6	Response Reduction due to Increase of Damping	38
1.2.2	Dynamic Magnification Factor, Ground Excitation.....	40
1.2.2.1	Dynamic Magnification Factor of Relative Displacement	41
1.2.2.2	Dynamic Magnification Factor of Absolute Acceleration.....	44
1.3	Energy Dissipation and Effective Damping	50
1.3.1	Energy Dissipated per Cycle	50
1.3.1.1	Linear Viscous Damping.....	50
1.3.1.2	Energy Dissipated by Damping Force.....	51
1.3.1.3	Damping Coefficient and Damping Ratio of Linear Viscous Damping.....	52
1.3.1.4	Linear System	53

1.3.2	Damping and Seismic Force	54
1.3.2.1	Parametric Equation	54
1.3.3	Effective Damping	58
1.3.3.1	Effective Damping Coefficient	59
1.3.3.2	Effective Damping Ratio	60
1.3.3.3	General Forced Vibration, Energy Dissipation	61
1.3.3.4	Alternative Form of Damping Ratio.....	62
1.4	Summary	63
	References	63

Chapter 2 Linear Single-Degree-of-Freedom Systems with Arbitrary Excitations 65

2.1	Periodic Excitations.....	65
2.1.1	Periodic Signals.....	65
2.1.1.1	Periodic Functions	65
2.1.2	Fourier Series	68
2.1.2.1	Fourier Coefficients	68
2.1.3	Discrete Fourier Transform.....	72
2.1.3.1	Discretization of Signals.....	72
2.1.3.2	Discrete Fourier Series	74
2.1.4	General Damping Force	76
2.1.4.1	Linearity of Fourier Series	78
2.1.4.2	Steady-State Structural Force	78
2.1.4.3	Dry Friction Damping	81
2.1.4.4	General Nonlinear Viscous Damping	85
2.1.5	Response to Periodic Excitations	89
2.1.5.1	General Response	89
2.1.5.2	The n^{th} Steady-State Response.....	90
2.1.5.3	Transient Response	90
2.2	Transient Excitations	91
2.2.1	Transient Signals	91
2.2.2	Fourier Transform	91
2.2.2.1	Important Features of the Fourier Transform: A Summary	93
2.2.3	Laplace Transform	94
2.2.3.1	Important Features of the Laplace Transform: A Summary	95
2.2.4	Impulse Response.....	96
2.2.5	General Force and the Duhamel Integral	98
2.2.5.1	Convolution Integral	98
2.2.6	Transfer Function of Unit Impulse Response.....	100
2.2.7	Integral Transform of Convolution.....	102
2.3	Random Excitations.....	103
2.3.1	Random Variables	103
2.3.1.1	Mean Value, Mathematic Expectation.....	105
2.3.1.2	Variance and Mean Square Value	107
2.3.1.3	Standard Deviation and Root Mean Square Value	108
2.3.2	Random Process	109
2.3.2.1	Random Time Histories.....	109
2.3.2.2	Statistical Averaging.....	109

- 2.3.3 Correlation Functions and Power Spectral Density Functions..... 112
 - 2.3.3.1 Correlation Analysis 112
 - 2.3.3.2 Power Spectral Density Function 115
- 2.3.4 Correlation between Forcing Function and Impulse Response Function..... 124
- 2.3.5 Basic Approach to Dealing with Random Vibrations..... 128
- 2.4 Earthquake Responses of SDOF Linear Systems 128
 - 2.4.1 Response Spectrum 128
 - 2.4.2 Design Spectra 131
 - 2.4.3 Control Factor for Damper Design: The Base Shear 137
 - 2.4.3.1 Spectral Accelerations and Displacement 141
- 2.5 Summary 141
- References 141

Chapter 3 Linear Proportionally Damped Multi-Degree-of-Freedom Systems 143

- 3.1 Undamped MDOF Systems..... 143
 - 3.1.1 Eigen-Parameters of Linear Undamped Systems 143
 - 3.1.1.1 Governing Equations 143
 - 3.1.1.2 Modal Response of Free Vibrations 145
 - 3.1.1.3 General Eigen-Parameters 146
 - 3.1.2 Brief Discussion of Vectors and Matrices 148
 - 3.1.2.1 Vector..... 148
 - 3.1.2.2 Vector Norm 149
 - 3.1.2.3 Orthonormal Vectors 150
 - 3.1.2.4 Unit Vector..... 150
 - 3.1.2.5 Vector Space 152
 - 3.1.2.6 Linear Independence 152
 - 3.1.3 Symmetric Matrix and Rayleigh Quotient 154
 - 3.1.3.1 Eigen-Parameters of Symmetric Matrices..... 154
 - 3.1.3.2 Rayleigh Quotient 156
- 3.2 Proportionally Damped MDOF Systems 159
 - 3.2.1 Modal Analysis and Decoupling Procedure 159
 - 3.2.1.1 Governing Equation of Damped MDOF Systems..... 159
 - 3.2.1.2 Decoupling by Means of Rayleigh Quotient 160
 - 3.2.1.3 Decoupling by Means of Linear Transformation 162
 - 3.2.2 Free-Decay Vibration 164
- 3.3 Modal Participation and Truncation..... 169
 - 3.3.1 Modal Participation Factor..... 169
 - 3.3.2 Modal Contribution Indicator 170
 - 3.3.2.1 Theory of the Indicator..... 170
 - 3.3.2.2 Realization of Indicators..... 172
 - 3.3.3 Response Computation of Truncated Modal Superposition 173
 - 3.3.3.1 Computation Procedure 173
 - 3.3.4 Peak Responses 181
- 3.4 Base Shear and Lateral Force..... 182
- 3.5 Natural Frequency and Mode Shape Estimation..... 185
 - 3.5.1 Natural Frequency 185
 - 3.5.2 Mode Shape Estimation 188
- 3.6 Coefficient Matrix for Proportional Damping..... 190
 - 3.6.1 Rayleigh Damping..... 190

3.6.2	Caughey Damping.....	191
3.6.3	Modification of Caughey Damping.....	192
3.6.4	Overdamped Modes	193
3.6.5	Alternative Expression of Proportional Damping.....	194
3.6.5.1	Generalized Symmetric Damping Matrix.....	195
3.7	Summary	196
	References	196

Chapter 4	Multi-Degree-of-Freedom Systems with General Damping.....	197
4.1	State Equations and Conventional Treatment.....	197
4.1.1	State Matrix and Eigen-Decomposition	197
4.1.1.1	State Equations	197
4.1.2	Accompanist Matrix of Mode Shapes.....	204
4.1.3	Linear Independency and Orthogonality Conditions.....	207
4.1.4	Approach of Complex Damping.....	212
4.1.5	Solutions in 2n Modal Space.....	218
4.1.5.1	Mode Decoupling	218
4.1.5.2	Alternative Computation Method.....	219
4.2	Damper Design for Nonproportionally Damped Systems	225
4.2.1	Issues with General Damper Design	225
4.2.2	Essence of the Solution of Nonproportionally Damped System	226
4.2.3	Modal Truncations for Nonproportionally Damped Systems.....	230
4.3	Overdamped Subsystems.....	230
4.3.1	Concept of Overdamped System.....	231
4.3.2	Design Response Spectra for Overdamped Subsystem.....	236
4.3.2.1	Spectral Value.....	236
4.3.2.2	Overdamping Constant	237
4.4	Responses of Generally Damped Systems and the Design Spectra.....	240
4.4.1	Approach in 2n- and n-Space, Design Codes.....	241
4.4.2	Modal Solution in n-Dimensional Space.....	244
4.4.3	Modal Truncations for a Generally Damped System.....	248
4.5	Modal Participation and Modal Criteria	249
4.5.1	Criteria on Complex Mode.....	249
4.5.1.1	Modal Energy Index	249
4.5.1.2	Complex Modal Factor	251
4.5.2	Modal Participation Factors	253
4.5.2.1	Nonproportionally Damped Modes.....	254
4.5.2.2	Proportionally Damped Modes	254
4.5.2.3	Overdamped Subsystems.....	256
4.5.3	Modal Contribution Indicators.....	256
4.5.3.1	Modal Mass Ratio.....	256
4.5.3.2	Static Modal Energy Ratio	260
4.5.4	Modal Reconstruction of Generally Damped System	262
4.5.4.1	Modal Reconstruction for Damper Design.....	264
4.5.4.2	Damper Design without Stiffness Matrix.....	268
4.6	Summary	275
	References	275

PART II Principles and Guidelines for Damping Control

Chapter 5	Principles of Damper Design	279
5.1	Modeling of Damping	279
5.1.1	General Classifications of Damping.....	280
5.1.1.1	Damping Ratios of Systems.....	280
5.1.1.2	Damping Force of Systems.....	281
5.1.1.3	Bilinear Damping	283
5.1.1.4	Sublinear Damping	285
5.1.2	Effective Damping Ratios for MDOF Systems.....	288
5.1.2.1	Timoshenko Damping	288
5.1.2.2	Force-Based Effective Damping.....	294
5.2	Rectangular Law, Maximum Energy Dissipation per Device.....	295
5.2.1	Maximum Energy Dissipation, Rectangular Law of Damping	296
5.2.2	Smallest Maximum Dissipation, Rectangular Law of Seismic Work	297
5.2.2.1	Minimum Work Done by Maximum Seismic Force	297
5.2.2.2	Linearity of Nonlinear Responses	300
5.2.3	Quality Factor.....	301
5.2.4	Issues of Multiple Dynamic Equilibrium Positions	303
5.3	Damping Adaptability	303
5.3.1	Concept of Damping Adaptability	304
5.3.2	Deformation Shape Function.....	307
5.4	Design and Control Parameters.....	308
5.4.1	Low Damping and High Damping Structures	308
5.4.1.1	Control Parameters and Design Parameters of Linear Systems	308
5.4.1.2	Necessity of Additional Design Parameters	311
5.4.2	Issues of Damping Ratios.....	314
5.5	Damping Force–Related Issues.....	316
5.5.1	Recoverable Damping and Self-Centering Systems.....	316
5.5.1.1	Recoverable Damping.....	317
5.5.1.2	Self-Centering Structures	319
5.5.1.3	Relation between Stiffness and Damping.....	319
5.5.2	Working Frequency and Temperature of Dampers.....	321
5.5.2.1	Effect on Self-Centering	321
5.5.2.2	Frequency-Dependent and Temperature-Dependent Damping	321
5.5.3	Damper Design Considering Supporting Stiffness.....	323
5.5.3.1	Modeling.....	323
5.5.3.2	Approximation	326
5.5.3.3	Generalized Supporting Stiffness.....	330
5.5.3.4	Design Considerations	331
5.5.4	Damper Installation.....	337
5.6	Summary	339
	References	339

Chapter 6	System Nonlinearity and Damping of Irregular Structures.....	343
6.1	Nonlinear Systems.....	343
6.1.1	Classifications of Nonlinear Damping	343
6.1.1.1	Control Parameters and Design Parameters of Nonlinear Systems.....	344
6.1.1.2	Nonlinear Damper Classification	346
6.1.2	Conventional Preliminary Estimation.....	347
6.1.2.1	Nonlinear Dynamics.....	348
6.1.2.2	Nonlinear Statics	350
6.1.2.3	Engineering Issues.....	355
6.1.2.4	Equivalent Linear SDOF Systems	361
6.1.3	Consideration of Nonlinear Damping for MDOF Systems.....	364
6.1.3.1	Generic Nonlinear Damping	364
6.1.3.2	General Idea of Nonlinear Damping Design.....	365
6.1.4	Yield Structure with Supplemental Damping: Simplified Approach	366
6.1.4.1	Damping Ratio Summability.....	366
6.1.4.2	Period Determination	367
6.2	Irregular MDOF System	368
6.2.1	Irregular Structures	368
6.2.1.1	Effect of Structural Configuration.....	368
6.2.1.2	Conventional Definitions	370
6.2.2	Vertical Irregularity	370
6.2.3	Plane Irregularity	371
6.2.3.1	Principal Axes of Structures.....	371
6.2.3.2	Cross Effect	373
6.2.4	Irregular Damping.....	374
6.2.4.1	Regular Mass-Stiffness, Irregular Damping	374
6.2.5	Design Considerations for Nonproportionality Damping	377
6.2.6	Response Estimation Using Response Spectra	378
6.3	Minimizing Damping Nonproportionality.....	379
6.3.1	Further Discussion on Conventional Energy Equation	379
6.3.1.1	Minimization of Conservative Energy	379
6.3.2	Minimization of Damping Nonproportionality	382
6.4	Role of Damping in Nonlinear Systems.....	382
6.4.1	Linear Systems.....	382
6.4.1.1	Response Spectra of Seismic Work and Energy.....	382
6.4.1.2	Brief Summary of Damping Effect for Linear Design Spectra	388
6.4.1.3	Energy Equation in Linear Systems	390
6.4.1.4	Limitation of Damping Control.....	392
6.4.2	Nonlinear Damping and Nonlinear Systems	393
6.4.2.1	Energy Dissipation in Nonlinear Systems	393
6.4.2.2	Notes on Nonlinear Response Spectra	397
6.4.2.3	Rule 0.65 and the Penzien Constant	397
6.4.2.4	Nonlinear Spectra.....	400
6.4.3	Inelastic Structure with Large Ductility	401
6.4.3.1	Inelastic Structure with Supplemental Damping.....	401
6.4.3.2	Criterion of Nonlinear Overdamping	402
6.4.3.3	Energy Dissipations by Viscous and Bilinear Damping	402

6.4.3.4	Seismic Responses of Inelastic Structures with Viscous Damping.....	403
6.4.3.5	Biased Deformation of Inelastic Structures.....	404
6.4.3.6	Force–Displacement Loop of Inelastic Deformation	405
6.5	Summary	406
	References	407

PART III *Design of Supplemental Damping*

Chapter 7	Linear Damping Design	411
7.1	Overview of Design Approaches.....	411
7.1.1	Design Philosophy.....	411
7.1.2	Design Methods for Linear Systems	412
7.2	MSSP Systems Simplified Approach	415
7.2.1	General Description	415
7.2.2	Feasibility of Damping Control.....	416
7.2.3	SDOF and MSSP Systems.....	417
7.2.4	Basic Design Procedure	418
7.2.4.1	Estimation of Seismic Response of Original Structure	418
7.2.4.2	Determination of Damping Ratio and Damping Coefficient.....	423
7.2.4.3	Specifications of Dampers	424
7.3	Proportionally Damped MDOF Systems Approach	431
7.3.1	General Description	431
7.3.2	Criterion for Modal Selection.....	431
7.3.3	Basic Design Procedure	431
7.3.3.1	Estimation of Seismic Response of Original Structure	431
7.3.3.2	Determination of Damping Ratio and Damping Coefficient.....	436
7.3.3.3	Selection of Damper	437
7.4	Design of Generally Damped Systems.....	441
7.4.1	Criteria for Generally Damped Systems	441
7.4.2	Basic Design Procedure	441
7.4.2.1	Estimation of Seismic Response of Structure with Dampers.....	441
7.4.2.4	Redesign of Damping Devices	447
7.4.2.5	Selection of Dampers.....	447
7.5	Damper Design Issues	449
7.5.1	Supporting Stiffness.....	449
7.5.1.1	General Requirement.....	449
7.5.2	Modification of Non-Timoshenko Damping	453
7.5.3	Safety, Reliability, and Maintenance Issues	454
7.5.3.1	Fail-Safe Concept	454
7.5.3.2	Maximum Force in Dampers.....	454
7.5.3.3	Stability of Damper System.....	455
7.5.3.4	Combinations of Different Devices	457
7.5.3.5	Safety Factors	457
7.5.3.6	Reliability and Maintenance.....	459

7.5.4	Numerical Damping Coefficient	459
7.5.4.1	Concept of Numerical Damping Coefficient B	459
7.5.4.2	Modification of Design Spectrum Based on Period Range	462
7.5.5	Modified SRSS	465
7.5.5.1	Absolute Acceleration	465
7.5.5.2	Incomplete Modes	467
7.6	Damper Design Codes	468
7.7	Brief Summary of Damping Design of Linear Systems	468
7.7.1	Major Step (1) Decision Making	468
7.7.2	Major Step (2) Modal Analysis	470
7.7.3	Major Step (3) Spectral Values	471
7.7.4	Major Step (4) Model Responses	471
7.7.5	Major Step (5) Criteria of Supplemental Damping	471
7.7.6	Major Step (6) Design Damping Ratio, Specifications of Damping Devices, Reevaluation of Total Design	472
	References	473

Chapter 8 Nonlinear Damping..... 475

8.1	Overview of Design Approaches	475
8.1.1	General Description	475
8.1.1.1	Condition of Using Supplemental Damping	476
8.1.1.2	Amount of Damping	476
8.1.1.3	Type of Damping Devices	476
8.1.1.4	Models for Reevaluation of Structural Responses	476
8.1.1.5	Structural Ductility	477
8.1.2	Types of Damping	477
8.1.2.1	Bilinear Damping	477
8.1.2.2	Sublinear Damping	478
8.1.2.3	Basic Differences between Bilinear and Sublinear Damping	478
8.1.2.4	Other Types of Dampers	479
8.1.3	Design Procedures	479
8.1.3.1	Equivalent Linear Systems	479
8.1.3.2	Nonlinear Response Spectra	479
8.2	Equivalent Linear Systems Approach with Bilinear Dampers	480
8.2.1	General Description	480
8.2.1.1	Selection of Design Models	480
8.2.1.2	Response Estimation and First Round of Damper Design	480
8.2.2	Response Estimation	488
8.2.2.1	Equation of Motion	488
8.2.2.2	Response Reevaluation	490
8.2.3	Design Issues	492
8.2.3.1	SDOF Systems	492
8.2.3.2	MDOF Systems	496
8.2.3.3	Brief Summary	496
8.2.4	Damper Specification	497
8.2.4.1	Basic Parameters	497
8.2.4.2	Selection of Bilinear Dampers	500

8.3 Equivalent Linear Systems Approach with Sublinear Dampers 500

8.3.1 General Description 500

8.3.1.1 Response Estimation and First Round of Damper Design 501

8.3.2 Response Estimation 502

8.3.2.1 Mode Shape Computations 502

8.3.2.2 Response Reevaluation 503

8.3.2.3 Summary of Simplified Design 506

8.3.3 Design Issues 507

8.3.3.1 SDOF Systems: Effective Mode 507

8.3.3.2 MDOF Systems 513

8.3.4 Damper Specifications 515

8.4 Nonlinear Response Spectra Approach with Sublinear Dampers 515

8.4.1 General Description 515

8.4.1.1 Control Parameters and Response Spectra 515

8.4.2 Response Estimation 515

8.4.2.1 Linear Interpolations 517

8.4.2.2 MDOF Systems 520

8.4.3 Design Issues 520

8.5 Nonlinear Response Spectra Approach with Bilinear Dampers 525

8.5.1 General Description 525

8.5.1.1 Supplemental Damping and Inelastic Structures 525

8.5.1.2 Displacement-Based Design 526

8.5.2 Response Estimation 528

8.5.2.1 Overview 528

8.5.2.2 Response Estimation Based on Bilinear Spectra 530

8.5.2.3 Bilinear Design Spectra 530

8.5.3 Design Issues 543

8.6 Summary 544

8.6.1 Preliminary Decision Making 544

8.6.2 Initial Damping Design 545

8.6.3 Response Estimation with Proper Model of Damping 545

8.6.3.1 Parameters of an SDOF System 545

8.6.3.2 Shape Function and Modal Participation Factor 546

8.6.3.3 Trial-and-Error Iteration 546

8.6.4 Selection of Damping Devices 546
