Preface	xi
Acknowledgements	xiii
Notation	xiv
Introduction: Eurocodes	1
Introduction	1
Eurocode 0	1
Eurocode 1	2
Eurocodes 2, 3 and 4	3
1 General concepts	7
Introduction	7
Structural forms	7
Codes	9
Materials	9
Composite action	17
Shear connectors	19
Testing of the shear connection	23
Example 1.1 Connector tests	24
2 Composite slabs	26
Slab types	26
Loads and actions	27
Partial factors	29
Analysis	29
Combination of actions	32
Bending strength of reinforced concrete	33
Bending strength of a composite slab	34
Example 2.1 Composite slab in bending	34
Longitudinal shear	37
Vertical shear capacity	39
Effects of continuity	40
Fire resistance	41

Deflections, serviceability and construction issues	42
3 Composite beams	43
Introduction	43
Non-composite steel beams	43
Composite beams – solid slab	45
Example 3.1 Beam and solid slab	47
Composite beams – ribbed slab	49
Example 3.2 Beam and ribbed slab	51
Partial shear connection	53
Composite beams – precast slab	53
Example 3.3 Partial composite beam with precast slabs	55
Fire resistance of composite beams	57
4 Asymmetrical, encased and castellated sections	58
Asymmetrical beams	58
Example 4.1 Asymmetrical beam	58
Castellated and cellular beams	60
Example 4.2 Analysis of a castellated beam	62
Plate girders	63
Encased sections	65
Slimfloor structures	66
Example 4.3 Slimfloor beam test	68
Fire resistance of composite beams	70
5 Composite columns	71
Introduction	71
Concrete columns	71
Steel sections under axial load	73
Composite columns	74
Contribution ratio	75
Example 5.1 Testing of encased and filled tubes	75
Load transfer	77
Buckling of composite columns	78
Example 5.2 Buckling of encased and filled tubes	80
Moment–axial load (M – N) interaction	80
Example 5.3 M – N interaction diagram of a filled tube	82
Biaxial bending and axial load	83
Fire resistance of columns	83
6 Trusses	85
Introduction	85
Member strengths	87
Joints	87

Longitudinal shear transfer	90
Example 6.1 Floor trusses	91
Vierendeel trusses	93
Fire resistance of composite trusses	93
Storey-depth trusses	94
Large joints	94
Example 6.2 City of London storey deep truss	96
7 Braced frames	99
Introduction	99
Joints	99
Structural efficiency	101
Environmental issues	101
Example 7.1 Efficiency of floor plates	103
Building frames	103
Forces on bracing frames	104
Wind action	104
Horizontal destabilising forces	108
Partial load factors	109
Example 7.2 Horizontal forces	109
Vertical bracing	110
Steel bracing	111
Concrete bracing	111
Composite walls and bracing	113
Example 7.3 Steel, concrete and composite stability frame analysis	115
Double-skin composite panels	115
Horizontal bracing	118
8 Cantilevers, cracking and double composite beams	119
Introduction	119
Cantilever beams	119
Bracing	122
Tension stiffening	123
Effective slab width	125
Moment–shear interaction	125
Example 8.1 Cantilever cracking	126
Longitudinal shear	128
Shrinkage	128
Shear flow and changes in section	129
Example 8.2 Longitudinal shear	129
Continuous beams	130
Example 8.3 Continuous beam analysis	132
Haunches	133

Double composite action	133
Joints in continuous beams	134
9 Moment-resisting frames	136
Introduction	136
Wind moment method	136
Example 9.1 Wind moment method	139
Semi-rigid joints	140
Joint strength	141
Example 9.2 Joint strength	143
Joint stiffness	143
Example 9.3 Joint stiffness	147
Example 9.4 Full analysis	149
Frame bracing interaction	149
Tall buildings	149
Example 9.5 Tall composite tower	152
10 Serviceability and construction issues	155
Introduction	155
Construction loads	155
Deflections during construction	155
Lightweight concrete	160
Fibre-reinforced concrete	160
Stresses in composite sections	160
Cracking	161
Example 10.1 Cracking of a composite cantilever	162
Deflections of composite structures	162
Example 10.2 Floor plate deflections	164
Lateral movements	165
Dynamics	165
Example 10.3 Floor plate dynamics	168
Acoustic issues	168
Durability	170
11 Accidental actions, robustness and disproportionate collapse	171
Introduction	171
History	171
Accidental actions	172
Explosions	173
Terrorist incidents	173
Overload	175
Vehicle impact	175
Natural disasters	175
Tie requirements	177

Example 11.1 Floor ties	179
Disproportionate and progressive collapse	179
Example 11.2 Column removal	180
Risk assessment	180
Example 11.3 RIM analysis	182
12 Fire	183
Introduction	183
History	183
Fire resistance requirements	186
Load ratios	187
Material properties	188
Composite slabs in fire	191
Composite beams and trusses in fire	192
Example 12.1 Partly encased section in fire	192
Composite columns	193
Example 12.2 Columns for fire resistance	194
Stabilising frames and walls	195
Appendix A: Calculation of elastic section properties	197
Appendix B: Plastic section properties for steel–concrete composite sections	199
Appendix C: Properties of steel and steel–concrete sections	200
Appendix D: Characteristic capacity of various connectors	203
Appendix E: Slab spans	204
Appendix F: Composite sheeting properties	205
References	206
Further reading	210
Index	213
