|-------------------------------------------------------------------------|-----------|
| <i>Preface to the Second Edition</i>                                    | vii       |
| <i>Preface to the First Edition</i>                                     | ix        |
| <b>1. Definitions</b>                                                   | <b>1</b>  |
| 1.1 Introduction                                                        | 1         |
| 1.2 Link (Element)                                                      | 2         |
| 1.3 Kinematic Pair                                                      | 2         |
| 1.4 Kinematic Chain                                                     | 4         |
| 1.5 Relationship for Constrained Motion in a Mechanism in Planar Motion | 4         |
| 1.6 Inversions of Mechanism                                             | 5         |
| Quadric Cycle Chain                                                     | 5         |
| Single Slider Crank Chain                                               | 7         |
| 1.7 Dead Centres and Change Points                                      | 8         |
| 1.8 Other Kinematic Chains                                              | 10        |
| 1.9 Summary                                                             | 10        |
| <b>2. Kinematics of Rigid Bodies</b>                                    | <b>12</b> |
| 2.1 Introduction                                                        | 12        |
| 2.2 Simple Vector Operations                                            | 12        |
| Dot Product                                                             | 12        |
| Cross Product                                                           | 13        |
| 2.3 Dimensions of Significance                                          | 13        |
| 2.4 Relative Velocity and Acceleration Method                           | 13        |
| Quadric Cycle Chain                                                     | 15        |
| Single Cylinder Crank Chain                                             | 19        |
| Compound Kinematic Chains                                               | 24        |
| Quick Return Motion                                                     | 25        |
| 2.5 Instantaneous Centre Method                                         | 27        |
| Single Slider Crank Chain                                               | 28        |
| Compound Kinematic Chain                                                | 29        |
| 2.6 Analytical Method                                                   | 31        |
| Fourier Series Expansion                                                | 33        |
| 2.7 Kinematics of Links Having Space Motion                             | 35        |
| 2.8 Summary                                                             | 39        |
| 2.9 Exercises                                                           | 40        |

|                                                                                   |           |
|-----------------------------------------------------------------------------------|-----------|
| <b>3. Dynamics of Rigid Links</b>                                                 | <b>51</b> |
| 3.1 Introduction                                                                  | 51        |
| 3.2 Plane Motion                                                                  | 51        |
| Single Slider Crank Mechanism                                                     | 51        |
| Quadric Cycle Chain                                                               | 54        |
| 3.3 Three Dimensional Dynamic Analysis                                            | 58        |
| Mass Moments of Inertia                                                           | 59        |
| 3.4 Summary                                                                       | 67        |
| 3.5 Exercises                                                                     | 68        |
| <b>4. Cam Dynamics</b>                                                            | <b>73</b> |
| 4.1 Introduction                                                                  | 73        |
| 4.2 Cam Profile for a Known Follower Response                                     | 74        |
| Parabolic Cam                                                                     | 74        |
| Simple Harmonic Cam                                                               | 75        |
| Cycloidal Cam                                                                     | 77        |
| 3-4-5 Polynomial Cam                                                              | 78        |
| 4.3 Drawing the Cam Profile for a Given Lift or Fall                              | 80        |
| Graphical Approach                                                                | 80        |
| Roller Follower with the Line of Stroke Passing Through the Axis of the Cam Shaft | 81        |
| Flat Foot Follower                                                                | 82        |
| Roller Follower with an Offset                                                    | 82        |
| Roller Follower on a Rocker Arm                                                   | 83        |
| 4.4 Analytical Approach for the Pitch Curve                                       | 84        |
| Radial Cam—Translating Radial Roller Follower                                     | 84        |
| Offset Roller Follower                                                            | 84        |
| Flat Faced Follower                                                               | 86        |
| 4.5 Cams with Straight Lines and Circular Arcs                                    | 87        |
| Circular Arc Cam with a Flat Footed Follower                                      | 87        |
| Roller Follower with a Circular Arc                                               | 89        |
| Straight Flanks with Roller Followers                                             | 90        |
| 4.6 Eccentric                                                                     | 92        |
| 4.7 Summary                                                                       | 95        |
