Contents

Preface *vii*

1 INTRODUCTION **1**

2 FORCE SYSTEMS **11**

2.1 Introduction 11
2.2 The Concept of a Rigid Body 11
2.3 The Concept of a Force 12
2.4 Transmissibility of a Force 14
2.5 Classification of Force Systems 15
2.6 Composition and Resolution of Forces 15
2.7 Body and Surface Forces 18
2.8 Distributed and Concentrated Forces 18
2.9 Rate of Application of Forces 20
2.10 Moment of a Force 21
2.11 Moment of a Couple 25
2.12 Resolution of a Force into a Force and a Couple 29
2.13 Resultants of Force Systems 31

3 EQUILIBRIUM OF RIGID BODIES **37**

3.1 Introduction 37
3.2 Necessary and Sufficient Conditions of Equilibrium of Rigid Bodies 38
3.3 Simplified Use of Equilibrium Equations for Special Situations 39
3.3.1 Conditions for equilibrium of a two force member 40

3.3.2 Conditions for Equilibrium of a Three Force Member 40
3.3.3 Conditions for Equilibrium of a Rigid Body Under the Action of a General Co-planar System of Forces 42
3.4 Free-body Diagram (FBD) 43
3.5 Reactions at Supports for a Two-dimensional Structure 45
3.6 Work and the Principle of Virtual Work 57
3.6.1 Work 57
3.6.2 Principle of Virtual Work 58

4 TRUSSES AND CABLES 71

4.1 Introduction 71
4.2 Trusses 71
4.3 Idealization of Joints 74
4.4 Common Types of Trusses 77
4.5 Classification of Statically Determinate and Statically Indeterminate Trusses 78
4.6 Analysis of Statically Determinate Trusses 80
4.6.1 Method of Joints 80
4.6.2 Method of Sections 85
4.6.3 Discussion of Method of Joints and Method of Sections 89
4.7 Analysis of Simple Statically Indeterminate Trusses 89
4.8 Role of Computers in Truss Analysis 91
4.9 Flexible Cables 97
4.10 Flexible Cable Supporting Concentrated Loads in the Transverse Direction 97
4.11 Flexible Cable Supporting Distributed Loads in the Transverse Direction 101
4.12 Uniformly Loaded Cables 104
4.12.1 Parabolic Cables 104
4.12.2 Catenary Cable 106
4.12.3 Approximation of Catenary Cable as a Parabolic Cable for Small Sag to Span Ratios 109
4.12.4 Historical Background of the Development of Solution for Catenary Cable 110

5 LAWS OF FRICTION AND SIMPLE MACHINES **121**

5.1 Introduction 121
5.2 Definition of Friction 121
5.3 External Friction 122
5.4 Internal Friction 123
5.4.1 Fluid Friction 123
5.4.2 Solid Friction 123
5.5 The Laws of Dry Friction 124
5.6 Mechanism of Static and Dynamic Friction 129
5.7 Further Comments on Static Friction Coefficient 130
5.8 Guidelines for Solving a Problem Involving Friction 132
5.9 Analysis of Simple Machines 135
5.9.1 Definition of a Machine 135
5.9.2 Mechanical Advantage 137
5.9.3 Velocity Ratio 138
5.9.4 Mechanical Efficiency 139
5.10 Applications of Friction in Machines 139
5.10.1 Wedges 139
5.10.2 Screw Jack 142

6 DYNAMICS **153**

6.1 Introduction 153
6.2 Force 154
6.3 Reference Frames and Coordinate Systems 155
6.4 Kinematics 157
6.5 Relative Motion 173
6.6 Kinetics of a Particle in Rectilinear Motion 179
6.7 Units 182
6.8 Equations of Motion for Rectilinear Translation 183
6.9 Application of the Equations of Rectilinear Motion 184
6.10 D' Alembert's Principle - Dynamics in Non-Inertial Frames 197

6.11 Integrated Forms of Newton's Law 203
6.11.1 The Time Integral: The Impulse-Momentum Principle 204
6.11.2 Integration over Displacement: The Work-Energy Principle 205
6.11.3 Power and Efficiency 206
6.12 Conservation Theorems 207
6.13 The Motion of Projectiles 220
6.14 Moment of Momentum and its Conservation 226
6.15 Motion under a Central Force 228
6.16 Fixed Axis Rotation of Rigid Bodies 235
6.17 Free Vibrations 247

7 STRESS AND STRAIN 269

7.1 Introduction 269
7.1.1 External Loads (Forces) 269
7.1.2 Static Loads 269
7.1.3 Dynamic Loads 270
7.1.4 Surface Forces 270
7.1.5 Body Forces 270
7.2 Stress 271
7.2.1 Stresses on an Inclined Plane 276
7.3 Strain 277
7.3.1 Normal Strain 277
7.3.2 Shear Strain 279
7.4 Poisson's Ratio 280
7.5 Elastic and Shear Moduli 280

8 GENERALIZED HOOKE'S LAW 283

8.1 Introduction 283
8.2 Three-dimensional Stress 284
8.3 Three-dimensional Strain 285
8.4 Generalized Hooke's law 287
8.5 Plane Stress and Plane Strain 292
8.5.1 Plane stress 292
8.5.2 Plane strain 293

8.6 Lames' Coefficient and Relation with Engineering Constants 294
8.7 Thermal Strains 295

9 TRANSFORMATION OF STRESSES AND STRAINS 303

9.1 Introduction 303
9.2 Transformation of Plane Stress 303
9.2.1 Principal Stresses & Maximum Shear Stresses 306
9.3 Transformation of Plane Strain 308
9.3.1 Principal Strains and Maximum Shear Strain 311
9.4 Mohr's Circle for Plane Stress 312
9.5 Mohr's Circle for Plane Strain 323

10 BENDING AND DEFLECTION OF BEAMS 329

10.1 Introduction 329
10.2 Beam and Beam Supports 329
10.3 Shearing Force and Bending Moment 332
10.4 Shear Force and Bending Moment Diagrams 333
10.5 Relationship between Shear Force, Bending Moment & External Loading 348
10.6 Deflection of Beams 359
10.6.1 Location of Neutral Axis 362
10.6.2 Relation for Flexural Stress and Moment-Curvature 363
10.6.3 Relation between Radius of Curvature and Deflection 364
10.7 Boundary Conditions 366
10.8 Moment-Area Method 374

11 TORSION OF CIRCULAR TUBES 395

11.1 Introduction 395
11.2 Torsion of Solid Circular Shaft 396
11.3 Twisting Moment and Shear Stress 397
11.3.1 Polar Moment of Inertia for Hollow Circular

Cross-section 399
11.4 Shafts with Discrete Torques 402

12 THIN WALLED CYLINDERS AND HELICAL SPRINGS 409

12.1 Introduction 409
12.2 Thin Walled Cylinders 409
12.3 Thin Walled Spheres 413
12.4 Helical Springs 415
12.4.1 Close-coiled Helical Springs 416

13 ELASTIC STRAIN ENERGY: CONCEPT & APPLICATIONS 421

13.1 Introduction 421
13.2 Strain Energy of an Elastic Rod Subjected to Tensile or Compressive Load 422
13.3 Strain Energy for Bending of a Beam 426
13.4 Strain Energy for Torsion 430
13.5 Strain Energy for Transverse Shear 432
13.6 Work and Energy Under Several Loads for Linear Elastic Systems 435
13.7 Castigliano's First Theorem 438
13.8 Castigliano's Second Theorem 438

14 INTRODUCTION TO FLUID MECHANICS 461

14.1 What is a Fluid? 461
14.2 Fluid Mechanics in Engineering 462

15 FLUID PROPERTIES 465

15.1 Introduction 465
15.2 Pressure 466
15.2.1 Pascal Principle 467
15.2.2 Absolute and Gauge Pressures 468
15.3 Vapour Pressure 469

15.4 Viscosity 470
15.4.1 Newton Law of Viscosity 471
15.4.2 Units of Viscosity 472
15.5 Surface Tension 474
15.6 Compressibility 474

16 PRESSURE IN A STATIC FLUID 479

16.1 Introduction 479
16.2 Variation of Pressure in a Static Fluid 479
16.2.1 Along a Vertical Direction 479
16.2.2 Along a Horizontal Direction 481
16.2.3 The Free Surface of a Liquid 483
16.2.4 Barometer 484
16.2.5 Pressure head 485
16.3 Capillarity 487
16.4 Pressure Measurement 491
16.4.1 Piezometer 491
16.4.2 Manometers 492
16.4.3 Differential Manometers 494
16.4.4 Reservoir Manometer 495
16.4.5 Inclined Tube Manometer 496
16.4.6 Reducing Errors in Manometry 497

17 PRESSURE FORCES ON SUBMERGED SURFACES 501

17.1 Introduction 501
17.2 Pressure Forces on Flat Surfaces 502
17.3 Pressure Forces an Curved Surfaces 503
17.4 Centre of Pressure on a Rectangular Surface 507
17.4.1 Parallel Axis Theorem 508
17.4.2 Centre of Pressure on an Inclined Plate 511
17.5 Buoyancy 517

18 FLUIDS IN MOTION 525

18.1 Field Description 525
18.2 Time Rate of Change 526

18.3 Pathlines, Streamlines & Streaklines 527
18.4 Mass Balance 529
18.5 Bernoulli Equation 531
18.6 Engineering Energy Equation 542

19 SOME PRACTICAL APPLICATIONS 551

19.1 Measurement of Flow Rates 551
19.1.1 Venturimeter 551
19.1.2 Orifice Plate Meter 554
19.1.3 Flow Measurement in Open Channels - Weirs 556
19.2 Measurement of Flow Velocity at a Point 557
19.3 Flow through Pipes 559
19.4 Laminar and Turbulent Flows 562
19.5 Pipe Losses in Turbulent Flows 563

20 INTRODUCTION TO THERMODYNAMICS 567

20.1 Thermodynamics 567
20.2 Thermodynamic Systems 568
20.3 Thermodynamic Properties and State of a System 569
20.4 Thermodynamic Equilibrium 570
20.5 Thermodynamic Processes 571
20.5.1 Reversible Process 572
20.5.2 Cyclic Processes or Cycle 573
20.6 The Zeroth Law of Thermodynamics and The Concept of Temperature 574
20.7 Basic Principles of Thermodynamics 575

21 ENERGY AND THE FIRST LAW 569

21.1 Principle of Energy Conservation 569
21.1.1 Energy Content 569
21.1.2 Energy Interactions 570
21.1.3 First Law of Thermodynamics 571
21.1.4 First Law Applied to a Cyclic Process 572
21.1.5 Nature of Work, Heat and Internal Energy 573

21.2 Some Properties of Simple Compressible Substances 576
21.3 Tabular Representation of Equations of State 582
21.4 First Law Analysis of Some Important Thermodynamic Processes 586
21.4.1 Constant Volume Heating 586
21.4.2 Constant Pressure Process 589
21.4.3 Isothermal Process 590
21.4.4 Reversible Adiabatic Process 591
21.5 Applications of First Law to Flow Processes 594

22 SECOND LAW OF THERMODYNAMICS 607

22.1 Introduction 607
22.2 Energy Reservoir 608
22.3 Available Energy and Entropy 608
22.4 Entropy Changes in Some Elementary Processes 610
22.4.1 Entropy Changes in a Work Reservoir 610
22.4.2 Entropy Changes of a Heat Reservoir 610
22.4.3 Entropy Change in Heat Transfer between two Heat Reservoirs 610
22.4.4 Heat Engine 611
22.5 Heat Pump 616

23 SOME ENERGY CONVERSIONS CYCLES 621

23.1 Otto Cycle 621
23.2 Diesel Cycle 626
23.3 Brayton Cycle for Gas Turbines 630

BIBLIOGRAPHY 643

INDEX 645
