ENGINEERING SOCIETIES MONOGRAPHS.	V
PREFACE.	vii
NOTATIONS.	xv
INTRODUCTION	1
1. Elasticity.	1
2. Stress.	2
3. Notations for Forces and Stresses	3
4. Components of Stress.	4
5. Components of Strain.	5
6. Hooke's Law.	7

CHAPTER I

PLANE STRESS AND PLANE STRAIN	12
7. Plane Stress.	12
8. Plane Deformation.	12
9. Stress at a Point.	15
10. Differential Equations of Equilibrium.	20
11. Boundary Conditions.	21
12. Compatibility Equations.	22
13. Stress Function	24

CHAPTER II

TWO-DIMENSIONAL PROBLEMS IN RECTANGULAR COORDINATES	27
14. Solution by Polynomials	27
15. Saint-Venant's Principle.	31
16. Determination of Displacements.	32
17. Bending of a Cantilever Loaded at the End	33
18. Bending of a Beam by Uniform Load.	38
19. Other Cases of Continuously Loaded Beams.	42
20. Solution of the Two-dimensional Problem in the Form of a Fourier Series	44

CHAPTER III

TWO-DIMENSIONAL PROBLEMS IN POLAR COORDINATES.	52
21. General Equations in Polar Coordinates	52
22. Stress Distribution Symmetrical about an Axis.	55
23. Pure Bending of Curved Bars	58
24. Strain Components in Polar Coordinates	62

	PAGE
25. Displacements for Symmetrical Stress Distributions	64
26. Rotating Disks.	66
27. Bending of a Curved Bar by a Force at the End.	70
28. The Effect of Circular Holes on Stress Distribution in Plates	75
29. Concentrated Force at a Point of a Straight Boundary	82
30. Any Vertical Loading of a Straight Boundary	88
31. Force Acting on the End of a Wedge	93
32. Concentrated Force Acting on a Beam	95
33. Stresses in a Circular Disk.	104
34. Force at a Point of an Infinite Plate	108
35. General Solution of the Two-Dimensional Problem in Polar Coordinates.	113
36. Applications of the General Solution in Polar Coordinates.	118
37. A Wedge Loaded along the Faces	121
38. Photo-elastic Method of Stress Measurements.	123

CHAPTER IV

STRAIN-ENERGY METHODS	135
39. Strain Energy	135
40. Principle of Virtual Work.	138
41. Castigliano's Theorem	145
42. Principle of Least Work.	150
43. Applications of the Principle of Least Work—Rectangular Plates.	151
44. Effective Width of Wide Beam Flanges.	156

CHAPTER V

THE SOLUTION OF TWO-DIMENSIONAL PROBLEMS BY MEANS OF THE COMPLEX VARIABLE.	162
45. Equations of Equilibrium in Terms of Displacements.	162
46. Functions of a Complex Variable.	163
47. Displacements for Plane Strain and Plane Stress.	166
48. Curvilinear Orthogonal Coordinates	168
49. Components of Strain in Orthogonal Curvilinear Coordinates	171
50. Two-dimensional Problems in Elliptic Coordinates	175
51. Inversion	177

CHAPTER VI

ANALYSIS OF STRESS AND STRAIN IN THREE DIMENSIONS.	182
52. Specification of Stress at a Point.	182
53. Principal Stresses.	183
54. Stress Ellipsoid and Stress-director Surface	184
55. Determination of the Principal Stresses.	186
56. Determination of the Maximum Shearing Stress	187
57. Homogeneous Deformation	188
58. Strain at a Point.	190
59. Principal Axes of Strain.	192

CHAPTER VII

GENERAL THEOREMS	194
60. Differential Equations of Equilibrium	194
61. Conditions of Compatibility	196
62. Determination of Displacements	199
63. Equations of Equilibrium in Terms of Displacements	199
64. Uniqueness of Solution	201
65. Thermal Stresses	203
66. Initial Stresses	213

CHAPTER VIII

ELEMENTARY PROBLEMS OF ELASTICITY IN THREE DIMENSIONS	216
67. Uniform Stress	216
68. Stretching of a Prismatical Bar by Its Own Weight	217
69. Twist of Circular Shafts of Constant Cross Section	220
70. Pure Bending of Prismatical Bars	221
71. Pure Bending of Plates	226

CHAPTER IX

TORSION	228
72. Torsion of Prismatical Bars	228
73. Displacements in the Torsion of Prismatical Bars	232
74. Bars with Elliptical Cross Section	234
75. Other Elementary Solutions	236
76. Membrane Analogy	239
77. Torsion of a Bar of Narrow Rectangular Cross Section	243
78. Torsion of Rectangular Bars	245
79. Additional Results	249
80. Solution of Torsional Problems by Energy Method	251
81. Torsion of Rolled Profile Sections	257
82. The Use of Soap Films in Solving Torsion Problems	260
83. Hydrodynamical Analogies	263
84. Torsion of Hollow Shafts	265
85. Torsion of Thin Tubes	269
86. Torsion of a Bar in Which One Cross Section Remains Plane	273
87. Torsion of Circular Shafts of Variable Diameter	276

CHAPTER X

BENDING OF PRISMATICAL BARS	285
88. Bending of a Cantilever	285
89. Stress Function	287
90. Circular Cross Section	288
91. Elliptic Cross Section	290
92. Rectangular Cross Section	292
93. Additional Results	298
94. Non-symmetrical Cross Sections	300
95. The Solution of Bending Problems by the Soap-film Method	301
96. Displacements	305
97. Further Investigations of Bending	306

CHAPTER XI

AXIALLY SYMMETRICAL STRESS DISTRIBUTION IN A SOLID OF REVOLUTION	309
98. General Equations	309
99. Solution by Polynomials	313
100. Bending of a Circular Plate	315
101. The Rotating Disk as a Three-dimensional Problem	319
102. Force at a Point of an Indefinitely Extended Solid	321
103. Spherical Container under Internal or External Uniform Pressure.	323
104. Local Stresses around a Spherical Cavity	326
105. Force on Boundary of a Semi-infinite Body	328
106. Load Distributed over a Part of the Boundary of a Semi-infinite Solid	333
107. Pressure between Two Spherical Bodies in Contact.	339
108. Pressure between Two Bodies in Contact. More General Case	344
109. Impact of Spheres	350
110. Symmetrical Deformation of a Circular Cylinder.	352
111. Twist of a Circular Ring Sector	355
112. Pure Bending of a Circular Ring Sector.	361
113. Thermal Stresses in Thin Circular Disks	364
114. Thermal Stresses in a Long Circular Cylinder	366
115. Thermal Stresses in a Sphere	376

CHAPTER XII

THE PROPAGATION OF WAVES IN ELASTIC SOLID MEDIUMS	381
116.	381
117. Longitudinal Waves in Prismatical Bars.	381
118. Longitudinal Impact of Bars.	387
119. Waves of Dilatation and Waves of Distortion in Isotropic Elastic Mediums.	395
120. Plane Waves.	397
121. Propagation of Waves over the Surface of an Elastic Solid Body	400
AUTHOR INDEX.	405
SUBJECT INDEX.	409
