
CONTENTS

1 Introduction

1.1 Overview	1
1.2 Objectives of the Book	2
1.3 Possible Applications	2
1.4 Historical Perspective	3
1.5 Uncertainties in the Building Process	5

2 Random Variables

2.1 Basic Definitions	7
2.1.1 Sample Space and Event / 2.1.2 Axioms of Probability / 2.1.3 Random Variables / 2.1.4 Basic Functions	
2.2 Properties of Probability Functions (CDF, PDF, and PMF)	13
2.3 Parameters of a Random Variable	13
2.3.1 Basic Parameters / 2.3.2 Sample Parameters / 2.3.3 Standard Form	
2.4 Common Random Variables	16
2.4.1 Uniform Random Variables / 2.4.2 Normal Random Variables /	
2.4.3 Lognormal Random Variables / 2.4.4 Gamma Distribution /	
2.4.5 Extreme Type I (Gumbel Distribution, Fisher-Tippett Type I) /	
2.4.6 Extreme Type II / 2.4.7 Extreme Type III (Weibull Distribution) /	
2.4.8 Poisson Distribution	
2.5 Probability Paper	28
2.6 Interpretation of Test Data Using Statistics	35
2.7 Conditional Probability	39
2.8 Random Vectors	40
2.9 Correlation	44
2.9.1 Basic Definitions / 2.9.2 Statistical Estimate of the Correlation Coefficient	

2.10	Bayesian Updating	50
2.10.1	<i>Bayes' Theorem / 2.10.2 Applications of Bayes' Theorem /</i>	
2.10.3	<i>Continuous Case</i>	
	Problems	54
3	Functions of Random Variables	57
3.1	Linear Functions of Random Variables	57
3.2	Linear Functions of Normal Variables	59
3.3	Product of Lognormal Random Variables	61
3.4	Nonlinear Function of Random Variables	64
3.5	Central Limit Theorem	66
3.5.1	<i>Sum of Random Variables / 3.5.2 Product of Random Variables</i>	
	Problems	67
4	Simulation Techniques	69
4.1	Monte Carlo Methods	69
4.1.1	<i>Basic Concept / 4.1.2 Generation of Uniformly Distributed Random</i>	
	<i>Numbers / 4.1.3 Generation of Standard Normal Random Numbers /</i>	
4.1.4	<i>Generation of Normal Random Numbers / 4.1.5 Generation of</i>	
	<i>Lognormal Random Numbers / 4.1.6 General Procedure for Generating</i>	
	<i>Random Numbers from an Arbitrary Distribution / 4.1.7 Accuracy of</i>	
	<i>Probability Estimates / 4.1.8 Simulation of Correlated Normal</i>	
	<i>Random Variables</i>	
4.2	Latin Hypercube Sampling	83
4.3	Rosenblueth's 2K+1 Point Estimate Method	85
	Problems	88
5	Structural Safety Analysis	91
5.1	Limit States	91
5.1.1	<i>Definition of Failure / 5.1.2 Limit State Functions</i>	
	<i>(Performance Functions)</i>	
5.2	Fundamental Case	96
5.2.1	<i>Probability of Failure / 5.2.2 Space of State Variables</i>	
5.3	Reliability Index	99
5.3.1	<i>Reduced Variables / 5.3.2 General Definition of the Reliability Index /</i>	
5.3.3	<i>First-Order Second-Moment Reliability Index /</i>	
5.3.4	<i>Comments on the First-Order Second-Moment Mean Value Index /</i>	
5.3.5	<i>Hasofer-Lind Reliability Index</i>	
5.4	Rackwitz-Fiessler Procedure	120
5.4.1	<i>Modified Matrix Procedure / 5.4.2 Graphical Procedure /</i>	
5.4.3	<i>Correlated Random Variables</i>	
5.5	Reliability Analysis Using Simulation	138
	Problems	141
6	Structural Load Models	145
6.1	Types of Load	145

6.2	General Load Models	146
6.3	Dead Load	148
6.4	Live Load in Buildings	148
6.4.1	<i>Design (Nominal) Live Load</i> / 6.4.2 <i>Sustained (Arbitrary Point-in-Time) Live Load</i> / 6.4.3 <i>Transient Live Load</i> / 6.4.4 <i>Maximum Live Load</i>	
6.5	Live Load for Bridges	153
6.6	Environmental Loads	159
6.6.1	<i>Wind Load</i> / 6.6.2 <i>Snow Load</i> / 6.6.3 <i>Earthquake</i>	
6.7	Load Combinations	168
6.7.1	<i>Time Variation</i> / 6.7.2 <i>Borges Model for Load Combination</i> / 6.7.3 <i>Turkstra's Rule</i> / 6.7.4 <i>Load Coincidence Method</i>	
	Problems	179
7	Models of Resistance	181
7.1	Parameters of Resistance	181
7.2	Steel Components	183
7.2.1	<i>Hot-Rolled Steel Beams (Noncomposite Behavior)</i> / 7.2.2 <i>Composite Steel Girders</i> / 7.2.3 <i>Shear Capacity of Steel Beams</i> / 7.2.4 <i>Steel Columns</i> / 7.2.5 <i>Cold-Formed Members</i>	
7.3	Aluminum Structures	191
7.4	Reinforced and Prestressed Concrete Components	192
7.4.1	<i>Concrete Elements in Buildings</i> / 7.4.2 <i>Concrete Elements in Bridges</i> / 7.4.3 <i>Resistance of Components with High-Strength Prestressing Bars</i>	
7.5	Wood Components	209
8	Design Codes	215
8.1	Overview	215
8.2	Role of a Code in the Building Process	216
8.3	Code Levels	219
8.4	Code Development Procedure	219
8.4.1	<i>Scope of the Code</i> / 8.4.2 <i>Code Objective</i> / 8.4.3 <i>Demand Function and Frequency of Demand</i> / 8.4.4 <i>Closeness to the Target (Space Metric)</i> / 8.4.5 <i>Code Format</i>	
8.5	Calibration of Partial Safety Factors for a Level I Code	228
8.6	Development of a Bridge Design Code	240
8.6.1	<i>Scope</i> / 8.6.2 <i>Objectives</i> / 8.6.3 <i>Frequency of Demand</i> / 8.6.4 <i>Target Reliability Level</i> / 8.6.5 <i>Load and Resistance Factors</i>	
8.7	Conclusions	248
	Problems	251
9	System Reliability	253
9.1	Elements and Systems	253
9.2	Series and Parallel Systems	255
9.2.1	<i>Series Systems</i> / 9.2.2 <i>Parallel Systems</i> / 9.2.3 <i>Hybrid (Combined) Systems</i>	
9.3	Reliability Bounds for Structural Systems	266

9.3.1	<i>Boolean Variables</i> / 9.3.2 <i>Series Systems with Positive Correlation</i> /	
9.3.3	<i>Parallel Systems with Positive Correlation</i> / 9.3.4 <i>Ditlevsen Bounds for a Series System</i>	
9.4	Systems with Equally Correlated Elements	270
9.4.1	<i>Series Systems with Equally Correlated Elements</i> / 9.4.2 <i>Parallel Systems with Equally Correlated Ductile Elements</i>	
9.5	Systems with Unequally Correlated Elements	279
9.5.1	<i>Parallel System with Ductile Elements</i> / 9.5.2 <i>Series System</i>	
9.6	Summary	285
	Problems	285
10	Uncertainties in the Building Process	289
10.1	Overview	289
10.1.1	<i>Human Error</i> / 10.1.2 <i>Categories of Uncertainty</i> /	
10.1.3	<i>Theoretical and Actual Failure Rates</i> / 10.1.4 <i>Previous Research</i>	
10.2	Classification of Errors	293
10.3	Error Surveys	296
10.4	Approach to Errors	299
10.5	Sensitivity Analysis	302
10.5.1	<i>Procedure</i> / 10.5.2 <i>Bridge Slab</i> / 10.5.3 <i>Beam-to-Column Connection</i> / 10.5.4 <i>Timber Bridge Deck</i> / 10.5.5 <i>Partially Rigid Frame Structure</i> / 10.5.6 <i>Rigid Frame Structure</i> / 10.5.7 <i>Noncomposite Steel Bridge Girder</i> / 10.5.8 <i>Composite Steel Bridge Girder</i> / 10.5.9 <i>Reinforced Concrete T-Beam</i> / 10.5.10 <i>Prestressed Concrete Bridge Girder</i> / 10.5.11 <i>Composite Steel Bridge System</i>	
10.6	Other Approaches	311
10.7	Conclusions	312
	Bibliography	315
	Appendix A Acronyms	323
	Appendix B Values of the CDF $\Phi(z)$ for the Standard Normal Probability Distribution	325
	Appendix C Values of the Gamma Function $\Gamma(k)$ for $1 \leq k \leq 2$	329
	Index	331
