<i>Preface</i>	<i>xv</i>
<i>Chemical engineering references</i>	<i>xviii</i>

Chapter 1 Introduction 1

1-1	Examples of the Role of Process Dynamics and Control	1
1-2	Objectives	6
1-3	Historical Background	6
1-4	Perspective	7
1-5	Motivation for Studying Process Control	8
1-6	General Concepts	8

PART ONE MATHEMATICAL MODELS OF CHEMICAL ENGINEERING SYSTEMS

Chapter 2 Fundamentals 15

2-1	Introduction	15
2-1.1	Uses of Mathematical Models	15
2-1.2	Scope of Coverage	16
2-1.3	Principles of Formulation	16
2-2	Fundamental Laws	17
2-2.1	Continuity Equations	18
2-2.2	Energy Equation	24
2-2.3	Equations of Motion	29
2-2.4	Transport Equations	34
2-2.5	Equations of State	35
2-2.6	Equilibrium	36
2-2.7	Chemical Kinetics	39

Chapter 3 Examples of Mathematical Models of Chemical Engineering Systems 43

3-1	Introduction	43
3-2	Series of Isothermal, Constant-holdup CSTR's	44
3-3	CSTR's with Variable Holdups	46
3-4	Gas-phase, Pressurized CSTR	47
3-5	Nonisothermal CSTR	49
3-6	Single-component Vaporizer	54
3-7	Multicomponent Flash Drum	58
3-8	Batch Reactor	62
3-9	Reactor with Mass Transfer	67
3-10	Ideal Binary Distillation Column	69
3-11	Multicomponent Nonideal Distillation Column	75

PART TWO COMPUTER SIMULATION

Chapter 4 Analog Simulation 93

- 4-1 Introduction 93
- 4-2 Basic Components 94
- 4-3 Operational Blocks 95
- 4-4 Simple Examples 99
- 4-5 More Complex Systems 107

Chapter 5 Digital Simulation 121

- 5-1 Numerical Methods 123
 - 5-1.1 Implicit Function Convergence 123
 - 5-1.2 Numerical Integration 130
- 5-2 Examples 139
 - 5-2.1 Three CSTR's in Series 139
 - 5-2.2 Nonisothermal CSTR 144
 - 5-2.3 Binary Distillation Column 148
 - 5-2.4 Multicomponent Distillation Column 152
 - 5-2.5 Batch Reactor 160

PART THREE DYNAMICS

Chapter 6 Time-domain Dynamics 173

- 6-1 Classification and Definition 174
- 6-2 Linearization and Perturbation Variables 177
 - 6-2.1 Linearization 177
 - 6-2.2 Perturbation Variables 180
- 6-3 Responses of Simple Linear Systems 182
 - 6-3.1 First-order Linear Ordinary Differential Equation (ODE) 182
 - 6-3.2 Second-order Linear Ordinary Differential Equations with Constant Coefficients 187
 - 6-3.3 Nth-order Linear Ordinary Differential Equations with Constant Coefficients 198
- 6-4 Steady-state Techniques 201

Chapter 7 Laplace-domain Dynamics 208

- 7-1 Laplace-transformation Fundamentals 209
 - 7-1.1 Definition 209
 - 7-1.2 Linearity Property 209
- 7-2 Laplace Transformation of Important Functions 210
 - 7-2.1 Step Function 210
 - 7-2.2 Ramp 210
 - 7-2.3 Sine 211
 - 7-2.4 Exponential 211
 - 7-2.5 Exponential Multiplied by Time 212
 - 7-2.6 Impulse (Dirac Delta Function $\delta_{(t)}$) 212

7-3	Inversion of Laplace Transforms	213
7-4	Transfer Functions	216
7-4.1	Multiplication by a Constant	216
7-4.2	Differentiation with Respect to Time	217
7-4.3	Integration	218
7-4.4	Dead Time	219
7-5	Examples	220
7-6	Properties of Transfer Functions	229

Chapter 8 Frequency-domain Dynamics 237

8-1	Definition	238
8-2	Basic Theorem	240
8-3	Representation	244
8-3.1	Nyquist Plots	244
8-3.2	Bode Plots	250
8-3.3	Nichols Plots	261
8-4	Frequency-domain Solution Techniques	264

Chapter 9 Process Identification 279

9-1	Purpose	279
9-2	Direct Methods	280
9-2.1	Time-domain Fitting of Step Test Data	280
9-2.2	Direct Sine-wave Testing	280
9-3	Pulse Testing	282
9-3.1	Calculation of $G_{(i\omega)}$ from Pulse Test Data	284
9-3.2	Digital Evaluation of Fourier Transformations	285
9-3.3	Practical Tips on Pulse Testing	291
9-3.4	Processes with Integration	292
9-4	Step Testing	294
9-5	Other Process Identification Methods	295
9-6	Relationships among Time, Laplace, and Frequency Domains	296
9-6.1	Laplace to Frequency Domain	296
9-6.2	Frequency to Laplace Domain	296
9-6.3	Time to Laplace Domain	298
9-6.4	Laplace to Time Domain	298
9-6.5	Time to Frequency Domain	298
9-6.6	Frequency to Time Domain	298

PART FOUR FEEDBACK CONTROL

Chapter 10 Time-domain Synthesis 305

10-1	Control Instrumentation	305
10-1.1	Sensors	308
10-1.2	Transmitters	310
10-1.3	Control Valves	313
10-1.4	Controllers	317
10-1.5	Computing Relays and Other Useful Gadgets	321

10-1.6	Digital Process-control Computers	322
10-2	Performance of Conventional Feedback Controllers	323
10-2.1	Specifications for Closed-loop Response	323
10-2.2	Load Performance	323
10-3	Controller Tuning	328
10-3.1	Rules of Thumb	328
10-3.2	On-line Trial and Error	330
10-3.3	Ziegler-Nichols Method	331
10-4	Control-systems Design Concepts	332
10-5	Nonconventional Control	338
10-5.1	Computed Variables	338
10-5.2	Nonlinear Controllers	339
10-5.3	Anti-Reset Windup	341
10-5.4	Selective Control Loops	342
10-5.5	Ratio Control	344

Chapter 11 Laplace-domain Synthesis 352

11-1	Stability	352
11-1.1	Relationship between Open-loop and Closed-loop Transfer Functions	353
11-1.2	Routh Stability Criterion	355
11-1.3	Direct Substitution for Stability Limit	359
11-2	Performance Specifications	360
11-2.1	Steady-state Performance	360
11-2.2	Dynamic Specifications	362
11-3	Root Locus Analysis and Synthesis Techniques	363
11-3.1	Definition	363
11-3.2	Construction of Root Locus Curves	366
11-4	Open-loop Unstable Processes	372
11-4.1	First-order Open-loop Unstable Process	374
11-4.2	Second-order Open-loop Unstable Process	374
11-4.3	Third-order Open-loop Unstable Process	376
11-5	Processes with Inverse Response	377
11-6	Interacting Control Systems	380

Chapter 12 Frequency-domain Synthesis 389

12-1	Nyquist Stability Criterion	390
12-1.1	Proof of Nyquist Stability Criterion	390
12-1.2	Examples	393
12-1.3	Representation	402
12-2	Specifications in the Frequency Domain	404
12-2.1	Phase Margin	404
12-2.2	Gain Margin	407
12-2.3	Maximum Closed-loop Log Modulus (LM)	407
12-3	Frequency Response of Feedback Controllers	415
12-3.1	Proportional Controller (P)	415
12-3.2	Proportional-Integral Controller (PI)	415

12-3.3	Proportional-Integral-Derivative Controller (PID)	415
12-4	Examples	416
12-4.1	Three-CSTR System	416
12-4.2	First-order Lag with Dead Time	423
12-4.3	Open-loop Unstable Process	423

PART FIVE FEEDFORWARD CONTROL

Chapter 13 Feedforward Control 431

13-1	Fundamentals	431
13-2	Typical Hardware Implementation	436
13-3	Examples of Feedforward Controller Design for Linear Systems	437
13-3.1	Three-CSTR System	437
13-3.2	Nonisothermal CSTR	438
13-3.3	Distillation Column	445
13-4	Nonlinear Feedforward Systems	446

PART SIX SAMPLED-DATA SYSTEMS

Chapter 14 Sampling and z Transforms 455

14-1	Introduction	455
14-1.1	Definition	455
14-1.2	Occurrence of Sampled-data Systems in Chemical Engineering	455
14-2	Impulse Sampler	460
14-3	Basic Sampling Theorem	464
14-4	z Transformation	465
14-4.1	Definition	465
14-4.2	Derivation of z Transforms of Common Functions	467
14-4.3	Effect of Dead Time	470
14-4.4	z -Transform Theorems	470
14-4.5	Inversion	472
14-5	Pulse Transfer Functions	477
14-6	Hold Devices	480
14-7	Open-loop and Closed-loop Systems	480
14-7.1	Open-loop Systems	481
14-7.2	Closed-loop Systems	485

Chapter 15 Analysis and Synthesis of Sampled-data Control Systems 493

15-1	Stability in the z Plane	493
15-2	Frequency-domain Design Techniques	496
15-2.1	Nyquist Stability Criterion	496
15-2.2	Rigorous Method	497
15-2.3	Approximate Method	502
15-3	z -Domain Root Locus Design Methods	504
15-4	Bilinear-transformation Design Methods	510

15-5	Sampled-data Controllers	514
15-5.1	Physical Realizability	515
15-5.2	Controller Design	515
15-5.3	Approximating Continuous Elements	518
15-6	Minimal-prototype Sampled-data Controllers	520

APPENDIX

A-1	Polynomial Root-solving Subroutine	531
A-2	Instrumentation Hardware	535
