

CONTENTS

PREFACE	9
LIST OF SYMBOLS	11
1. INTRODUCTION	15
1.1. Piezoelectric Transformer state of the art	16
1.1.1. Piezoelectric Transformer of monolayer type	18
1.1.2. Piezoelectric Transformer of layered and stacked type	22
1.1.3. Piezoelectric Transformer of multi compositional type	23
1.2. Applications area of piezoelectric transformers	23
1.2.1. Future trends in Piezoelectric Transformer developing	26
1.3. PZT as an effective material for Piezoelectric Transformers	28
1.3.1. Lead zirconate titanate for energy transformation	29
1.3.2. Lead zirconate titanate applications characterization	30
1.3.3. Lead zirconate titanate varieties characterization	30
1.3.4. Titanium to zirconium content change strategy characterization	31
1.3.5. Doping strategy characterization	32
1.3.6. Defects distribution influence characterization	33
1.4. PT – as an electrical element – equivalent circuit	34
1.4.1. PT – Property modeling	37
1.5. Piezoelectric transformers as a piezoelectric resonator	41
1.5.1. Rosen type piezoelectric transformer	42
1.5.2. Thickness Vibration Mode Piezoelectric Transformer	42
1.5.3. Radial Vibration Mode Piezoelectric Transformer	43
1.6. PT – High-power operating regimes issues	44
1.6.1. PT – New more efficient design of High-power PT's	44
1.6.2. Fabrication of high quality materials which fit the high power	45
1.6.3. Developing multilayer technique	46
1.6.4. Establishing of design method of the multilayered piezoelectric transformer	46
1.6.5. Driving circuit for completely inductance-less transformer	47
1.6.6. Stabilization of the driving circuit by means of resonant frequency control	47

1.7. PT – Driving principles and circuits, electronics	48
1.8. Main goal of this work: detector implementation of Piezoelectric Transformer	50
2. PIEZOELECTRIC TRANSFORMER IN MAGNETIC FIELD SENSOR	
APPLICATIONS	51
2.1. Piezoelectric Transformer as a magnetic field detector	52
2.2. Optically active piezoelectric materials	54
2.3. Piezoelectric light transducers	56
2.4. Piezoelectric Transformer in energy harvesting applications	57
3. A TECHNOLOGY OF MULTIFUNCTIONAL CERAMICS PROCESSING	60
3.1. Mixed Oxide Method	60
3.2. Sol gel method for multifunctional ceramics processing	62
3.3. Pressure assisted sintering method for multifunctional ceramics processing	63
4. MATERIALS IMPLEMENTATION	
FOR MULTIFUNCTIONAL TRANSFORMER CONSTRUCTION	66
4.1. PLZT ceramics for optically driven piezoelectric transformer	66
4.1.1. Experimental procedure (MOM)	68
4.1.2. Results and discussion	69
4.1.3. Experimental procedure 2: sol gel method	74
4.1.4. XRD characterization of PLZT samples	75
4.1.5. Light induced change in piezoelectric parameters evaluation	76
4.2. Lanthanum and ferrum Fe^{3+} doped PLZT materials characterization	77
4.2.1. Experimental sample preparation	78
4.2.2. Material testing	79
4.2.3. XRD characterization of PLFZT samples	80
4.2.4. Electrical properties evaluation of PLFZT samples	81
4.2.5. Voltage magnetoelectric coefficient evaluation	82
4.3. PBZT ceramics for layered multiferroic applications	83
4.3.1. Barium doped PZT materials characterization	84
4.3.2. Sample preparation	84
4.3.3. Materials testing	85

4.3.4. Impedance analysis	86
4.3.5. Atomic Force Microscopy in Piezo Response Mode polarization investigation	87
4.3.6. Mechanical properties of PBZT ceramics investigation	88
5. PIEZOELECTRIC TRANSFORMER AS A LIGHT INTENSITY TRANSDUCER	91
5.1. PLZT samples preparation	92
5.1.1. Application parameters characterization and discussion	92
5.1.2. Piezoelectric transformers gain comparison between PLZT8/65/35 and PLZT4/65/35	94
5.1.3. Piezoelectric PLZT 8/65/35 PT efficiency in darkness and illumination	94
5.1.4. Piezoelectric transformer frequency shift gain under illumination	95
5.2. Piezoelectric Transformer as a magnetic field detector from one-phase multiferroics	96
5.2.1. Magnetoelectric Effect (ME) and magnetic field induced change of PT gain in one phase multiferroics	98
5.2.2. Magnetoelectric Effect (ME) and magnetic field induced change of PT gain in two-phase multiferroics	99
5.2.3. Experimental	101
5.2.4. Application description and parameters characterization discussion	101
5.2.5. Piezoelectric transformers gain in function of applied DC magnetic field	102
5.2.6. Piezoelectric transformers efficiency in function of applied DC magnetic field	104
5.3. Piezoelectric Transformer as a magnetic field harvester	105
5.3.1. Application parameters characterization and discussion	106
6. FINAL CONCLUSIONS ON DETECTOR IMPLEMENTATION OF PIEZOELECTRIC TRANSFORMER	110
7. STRESZCZENIE	111
8. REFERENCES	112
