

CONTENTS

Preface.....	xiii
--------------	------

Chapter 1 - A Brief History of “Boundary Integral Equation/Element Methods” in Acoustics	1
References.....	9

Chapter 2 - Computational Formulation

2.1 Introduction	13
2.2 Fundamentals of the Boundary Element Method	15
2.2.1 The Laplace Equation	15
2.2.1.1 Basic relationships	15
2.2.1.2 Fundamental solution.....	17
2.2.1.3 Boundary integral equations	18
2.2.1.4 The boundary element method formulation	20
2.2.1.5 Evaluation of integrals.....	23
2.2.1.6 Boundary elements	24
2.2.1.7 Example: numerical results for a Laplace problem	34
2.2.2 Poisson’s Equation	35
2.2.2.1 Basic relationships	35
2.2.2.2 Cell integration approach.....	36
2.2.2.3 Example: numerical results for the Poisson equation using internal cells.....	37
2.3 Boundary Element Formulation for the Helmholtz Equation	38
2.3.1 Preliminary Considerations	38
2.3.2 Matrix Formulation.....	39
2.3.3 Examples	41
2.3.3.1 Pulsating sphere.....	41
2.3.3.2 Exhaust system	42
2.4 The Dual Reciprocity Method for the Internal Problem	44
2.4.1 Preliminary Considerations	44
2.4.2 Mathematical Development of the DRM	45
2.4.2.1 Basic formulation	45
2.4.2.2 Different f expansions	49
2.4.3 Solution Technique	50
2.4.4 Example: DRM Results for an Interior Problem	51
2.5 Time Dependent Problems	52
2.5.1 Time Dependent Fundamental Solution	53
2.5.1.1 Formulation.....	53
2.5.1.2 Examples	53
2.5.2 Time Dependent Models using DRM.....	56
2.5.2.1 Formulation.....	56
2.5.2.2 Example: one-dimensional elastic rod	56

2.6 Conclusion..... 58

References..... 58

Chapter 3 - Acoustic Radiation and Scattering

3.1 Introduction 61

3.2 Boundary Integral Equations 61

 3.2.1 Full-Space Formulation 61

 3.2.2 Half-Space Formulation 63

 3.2.3 Half-Space Contact Formulation 64

3.3 The Nonuniqueness Problem 65

 3.3.1 The CHIEF Method 66

 3.3.2 The Burton and Miller Method 66

 3.3.3 Other Methods 67

 3.3.4 The Enhanced CHIEF Method 67

3.4 Numerical Implementation 68

3.5 Example Problems 70

 3.5.1 Full-Space Radiation 70

 3.5.2 Half-Space Contact Scattering 72

 3.5.3 Scattering using the Enhanced CHIEF 74

3.6 Conclusion..... 74

References..... 74

Chapter 4 - Acoustic Design Sensitivity Analysis

4.1 Introduction 77

4.2 The Boundary Element Formulation for Acoustics 78

4.3 Design Sensitivity 79

4.4 The Design Sensitivity Formulation 80

 4.4.1 Non-Shape Change Sensitivity 81

 4.4.2 Sensitivity Formulation with CHIEF 82

 4.4.3 Frequency Sensitivity 82

 4.4.4 Field Pressure Sensitivity Formulation 83

4.5 Verification of the Design Sensitivity Formulations 83

4.6 Example of Design Sensitivity 84

4.7 Conclusion..... 89

Acknowledgements..... 91

References..... 91

Chapter 5 - Probabilistic Acoustic Analysis

5.1 Introduction 95

5.2 Basic Formulation 95

5.3 Perturbation Expansions and Uncertainty Modeling..... 98

 5.3.1 Perturbation Expansions..... 98

 5.3.2 Expectations of the Three Random Variables Model..... 100

5.4 Applications	101
5.4.1 Current Practices.....	101
5.4.2 Numerical Examples.....	102
5.4.2.1 Acoustic radiation from a uniformly pulsating sphere.....	102
5.4.2.2 Acoustic scattering from a rigid sphere.....	103
5.5 Conclusion.....	105
References.....	107

Chapter 6 - Structural Acoustic Coupling

6.1 Introduction	109
6.2 Basic Equations.....	109
6.3 Computational Techniques	113
6.3.1 Outline of Computations	113
6.3.2 Symmetry Conditions	114
6.3.3 Frequency Interpolation	115
6.4 Analysis of Output.....	121
6.4.1 Spectral and Spatial Descriptions of Far-Field Pressure.....	121
6.4.2 Surface Pressures and Normal Velocities	123
6.4.3 Acoustic Intensity and the Effect of Structural Damping.....	123
6.4.4 Mode Identification.....	125
6.5 Conclusion.....	127
Acknowledgements	127
References.....	129

Chapter 7 - Applications in the Automotive Industry

7.1 Introduction	131
7.2 BEM Acoustic Analysis.....	132
7.3 General Formulation for Complicated Boundary Conditions.....	134
7.4 Booming Noise Prediction Inside Sedan Compartment Model	136
7.5 Sound Radiation from Engine Oil Pan.....	139
7.6 Radiation Efficiency of Engine Head Cover	141
7.7 Conclusion.....	144
References.....	145

Chapter 8 - Applications in Bioacoustics

8.1 Introduction	147
8.2 The Human Hearing System	148
8.3 Overview of Models of the Outer Ear.....	149
8.3.1 Non-BEM Models.....	149
8.3.2 BEM Models.....	149
8.3.2.1 BEM applications to acoustic cavities and structures.....	149
8.3.2.2 BEM model of the outer ear.....	150
8.4 Formulations and Numerical Implementation	152

8.4.1 Basic Model: Three-Dimensional Coupled Elastic Structure-Acoustic Cavity Model.....	152
8.4.1.1 Formulations.....	152
8.4.1.2 Boundary impedances.....	154
8.4.1.3 Coupling conditions.....	155
8.4.1.4 Numerical implementation.....	155
8.4.2 Formulation for Viscoelasticity Extension.....	162
8.5 Numerical Results.....	164
8.6 Current and Future Research with BEM Hearing Model.....	168
8.7 The Future of BEM Applications in Bioacoustics.....	169
8.8 Conclusion.....	169
Acknowledgements.....	170
References.....	170

Chapter 9 - Applications in Industrial Noise Control

9.1 Introduction.....	177
9.2 BEM Formulation for Multiple Domains.....	177
9.3 Example Problems in Industrial Noise Control.....	179
9.3.1 Radiation from a Source within a Partial Enclosure.....	179
9.3.2 The Transmission Loss of Silencers.....	185
9.3.3 Sound Absorption by Bulk Acoustic Absorbers.....	187
9.4 Computational Efficiency for Practical Problems.....	188
9.4.1 Frequency Interpolation Technique.....	188
9.4.2 Point Source within an Enclosure.....	191
9.5 Conclusion.....	191
References.....	191

Chapter 10 - BEM Applications in Architectural Acoustics

10.1 Introduction.....	193
10.2 Transient Responses in Rooms.....	195
10.2.1 Kirchhoff's Formula.....	195
10.2.2 Sound Propagation in Porous Media.....	196
10.2.3 Numerical Integration of Kirchhoff's Formula.....	200
10.2.4 Transient Responses in a Cubic Room.....	204
10.2.5 Calculation of Responses in an Auditorium.....	205
10.2.6 Discussion.....	205
10.3 Calculation of Sound Field over Audience Seats.....	209
10.3.1 Relations for Steady Wave.....	209
10.3.2 Numerical Method of Calculation.....	210
10.3.3 Numerical Results and Discussion.....	214
10.3.3.1 Results in two dimensions.....	214
10.3.3.2 Results in three dimensions.....	216
10.4 Conclusion.....	219
References.....	219

Chapter 11 - Applications in Environmental Noise

11.1 Introduction 225

11.2 Integral Equations in Acoustics 228

 11.2.1 Time Domain Boundary Integral/Element Equations 228

 11.2.2 Frequency Domain Boundary Integral/Element Equations 232

11.3 Noise Reduction Problems 234

 11.3.1 Two-Dimensional Study of Different Barrier Configurations 234

 11.3.2 Analysis of Three Dimensional Barriers 239

 11.3.3 Car and Airplane Noise in Residential Areas 246

11.4 Conclusion 255

Acknowledgements 257

References 257

Appendix

State-of-the-Art References in Boundary Element Applications to Acoustics 261
