Preface.....xv

Acknowledgments xix

Authors xxi

1. Introduction 1

 Compressibility 1

 Fundamental Assumptions.....5

 Units.....8

 SI Units.....8

 English System8

 Conservation Laws 10

 Concluding Remarks..... 18

2. Equations for Steady One-Dimensional Compressible Fluid Flow 21

 Introduction..... 21

 Control Volume 23

 Continuity Equation 24

 Momentum Equation (Euler’s Equation)..... 26

 Steady Flow Energy Equation..... 28

 Equation of State 29

 Entropy Considerations 32

 Use of the One-Dimensional Flow Equations 35

 Concluding Remarks..... 36

3. Some Fundamental Aspects of Compressible Flow 39

 Introduction..... 39

 Isentropic Flow in a Streamtube..... 39

 Speed of Sound..... 43

 Mach Waves 51

 Concluding Remarks..... 55

4. One-Dimensional Isentropic Flow 59

 Introduction..... 59

 Governing Equations 59

 Stagnation Conditions..... 68

 Critical Conditions..... 76

 Maximum Discharge Velocity 78

 Isentropic Relations in Tabular and Graphical Form and from Software..... 79

 Concluding Remarks..... 81

5. Normal Shock Waves 87

 Shock Waves 87

 Stationary Normal Shock Waves 91

Normal Shock Wave Relations in Terms of Mach Number	100
Limiting Cases of Normal Shock Wave Relations	108
Normal Shock Wave Tables and Software	110
The Pitot Tube in Supersonic Flow	112
Moving Normal Shock Waves	117
Concluding Remarks.....	129
6. Oblique Shock Waves	135
Introduction	135
Oblique Shock Wave Relations	135
Reflection of Oblique Shock Waves	146
Interaction of Oblique Shock Waves	156
Conical Shock Waves.....	162
Concluding Remarks.....	165
7. Expansion Waves: Prandtl–Meyer Flow	169
Introduction	169
Prandtl–Meyer Flow	169
Reflection and Interaction of Expansion Waves	180
Boundary Layer Effects on Expansion Waves	184
Flow over Bodies Involving Shock and Expansion Waves	185
Unsteady Expansion Waves	191
Concluding Remarks.....	204
8. Variable Area Flow	209
Introduction	209
Effects of Area Changes on Flow	209
Equations for Variable Area Flow	215
Operating Characteristics of Nozzles	224
Convergent Nozzle	225
Convergent–Divergent Nozzle.....	229
Convergent–Divergent Supersonic Diffusers	241
Transonic Flow over a Body	251
Concluding Remarks.....	255
9. Adiabatic Flow in a Duct with Friction.....	263
Introduction	263
Flow in a Constant Area Duct.....	263
Friction Factor Variations.....	278
The Fanno Line	284
Frictional Flow in a Duct Preceded by an Isentropic Nozzle.....	287
The Effects of Friction on Variable Area Flow	295
Concluding Remarks.....	298
10. Flow with Heat Transfer.....	305
Introduction	305
Aerodynamic Heating.....	305
The Adiabatic Surface Temperature.....	306

Heat Transfer in High-Speed Flow	310
Internal Flows with Heat Addition or Removal.....	318
One-Dimensional Flow in a Constant Area Duct Neglecting Viscosity	319
Entropy–Temperature Relations	336
Variable Area Flow with Heat Addition.....	338
One-Dimensional Constant Area Flow with Both Heat Exchange and Friction.....	343
Isothermal Flow with Friction in a Constant Area Duct	348
Combustion Waves	353
Condensation Shocks	362
Concluding Remarks.....	364
External Flows.....	364
Internal Flows.....	365
Combustion and Condensation Waves.....	365
11. Hypersonic Flow	373
Introduction	373
Characteristics of Hypersonic Flow	373
Newtonian Theory	380
Modified Newtonian Theory	384
Forces on a Body	389
Concluding Remarks.....	396
12. High-Temperature Flows	399
Introduction	399
Effect of Temperature on Specific Heats.....	401
Perfect Gas Law.....	410
Dissociation and Ionization.....	413
Nonequilibrium Effects	424
Concluding Remarks.....	425
13. Low-Density Flows	427
Introduction	427
Knudsen Number	427
Low-Density Flow Regimes	430
Slip Flow.....	434
Free Molecular Flow.....	436
Concluding Remarks.....	440
14. An Introduction to Two-Dimensional Compressible Flow	441
Introduction.....	441
Governing Equations	441
Continuity Equation.....	441
Momentum Equation.....	443
Energy Equation.....	445
Vorticity Considerations	448
The Velocity Potential.....	451
Linearized Solutions.....	454
Linearized Subsonic Flow	459

Linearized Supersonic Flow.....464

Numerical Solutions.....473

Concluding Remarks.....473

Appendix A: COMPROP2 Code for Compressible Flow Properties475

Appendix B: Numerical Examples483

Appendix C: Mini-Project-Type Assignments.....497

Appendix D: Optical Methods in Compressible Flows.....499

Appendix E: Isentropic Flow Table for $\gamma = 1.4$ 507

Appendix F: Normal Shock Table for $\gamma = 1.4$513

Appendix G: Table for One-Dimensional Adiabatic Flow with Friction for $\gamma = 1.4$517

Appendix H: Table for One-Dimensional Flow with Heat Exchange for $\gamma = 1.4$ 523

Appendix I: Table for One-Dimensional Isothermal Flow with Friction for $\gamma = 1.4$...529

Appendix J: Oblique Shock Wave Charts for $\gamma = 1.4$535

Appendix K: Approximate Properties of the Standard Atmosphere.....541

Appendix L: Properties of Dry Air at Atmospheric Pressure.....543

Appendix M: Constants, Conversion Factors, and Units.....545

Bibliography.....547
