

Contents

Preface / ix

1. INTRODUCTION / 1

- 1.1. AUTOMATIC CONTROL / 1
 - 1.1.1. Classical Control Theory / 2
 - 1.1.2. Modern Control Theory / 2
- 1.2. OPTIMIZATION OF SYSTEMS / 3
 - 1.2.1. The Role of Estimation in System Control / 3
 - 1.2.2. Random Process and Statistical Inference / 4
 - 1.2.3. Dynamic Programming / 5
- 1.3. CONTINUOUS AND DISCRETE SYSTEMS / 5
- 1.4. NOTATIONAL CONVENTION / 6

2. REVIEW OF PROBABILITY AND STATISTICAL INFERENCE / 8

- 2.1. INTRODUCTION / 8
- 2.2. RANDOM VARIABLES AND THEIR PROPERTIES / 9
 - 2.2.1. The Cumulative Distribution Function / 10
 - 2.2.2. The Probability Density Function / 11
 - 2.2.3. The Expectation Operator / 15
- 2.3. DISTRIBUTION OF MORE THAN ONE RANDOM VARIABLE / 18
 - 2.3.1. Bivariate Distributions / 18
 - 2.3.2. Conditional Distributions / 21
 - 2.3.3. Independent Random Variables / 23
 - 2.3.4. The Multivariate Expectation Operator / 24
 - 2.3.5. The Covariance of Jointly Distributed Random Variables / 27
- 2.4. DISTRIBUTIONS OF FUNCTIONS OF RANDOM VARIABLES / 29
 - 2.4.1. One-to-One Transformations / 30
 - 2.4.2. Generalization to Multivariate Distributions / 31
- 2.5. THE NORMAL DISTRIBUTION / 33
 - 2.5.1. Marginal Distributions / 33
 - 2.5.2. Linear Operations / 33
 - 2.5.3. Conditional Distributions / 34

2.6. LIMIT THEOREMS /	35
2.6.1. The Law of Large Numbers /	35
2.6.2. The Central Limit Theorem /	36
2.7. STATISTICAL INFERENCE: ESTIMATION /	36
2.7.1. Point Estimation of Non-Random Parameters /	37
2.7.1.1. The Method of Moments /	37
2.7.1.2. The Method of Maximum Likelihood /	38
2.7.2. Estimation of a Random Variable /	39
2.7.2.1. Minimum Mean-Square Error Estimation /	40
2.7.2.2. Maximum Posterior Probability Estimation /	42
2.8. SUBJECTIVE VERSUS OBJECTIVE PROBABILITY /	42
REFERENCES /	43
DEVELOPMENTAL EXERCISES /	44
PROBLEMS /	44

3. RANDOM PROCESSES / 55

3.1. THE RANDOM PROCESS /	55
3.2. CHARACTERIZATION OF A RANDOM PROCESS /	56
3.2.1. Complete Characterization of a Random Process /	58
3.2.2. Second-Moment Characterization /	60
3.2.3. Stationary Random Processes /	63
3.3. PROPERTIES OF RANDOM PROCESSES /	64
3.3.1. Integration and Differentiation of Random Processes /	64
3.3.2. Time Averages of a Random Process /	68
3.3.3. Ergodic Theorems /	69
3.4. THE NORMAL RANDOM PROCESS /	70
3.5. THE RANDOM SEQUENCE /	73
3.6. THE MARKOV PROPERTY OF RANDOM PROCESSES AND WHITE NOISE /	74
3.6.1. The Continuous-Parameter Markov Process /	74
3.6.2. Discrete-Parameter Markov Processes /	75
3.6.3. Modeling of Markov Processes /	76
3.6.4. Relationships Between White Noise Processes and White Noise Sequences /	78
3.6.5. General Categories of Markov Processes /	80
3.7. THE VECTOR-VALUED RANDOM PROCESS /	81
REFERENCES /	84
DEVELOPMENTAL EXERCISES /	84
PROBLEMS /	85

4. BASIC TENETS OF SYSTEM THEORY / 90

- 4.1. THE MATHEMATICAL MODEL EQUATIONS / 90
- 4.2. THE LINEAR SYSTEM / 93
 - 4.2.1. Solution to the Nonhomogeneous Problem / 96
 - 4.2.2. The Difference Equation Representation / 98
- 4.3. PROPERTIES OF SYSTEMS / 100
 - 4.3.1. Stability of Systems / 101
 - 4.3.2. Controllability of Systems / 106
 - 4.3.3. Observability of Systems / 110
 - 4.3.4. General Results for Time-Varying Systems / 113
- 4.4. UNCERTAINTIES IN LINEAR SYSTEMS / 114
 - 4.4.1. Uncertainties in Continuous Systems / 114
 - 4.4.2. Uncertainties in Discrete Systems / 123
- 4.5. THE NONLINEAR SYSTEM / 124
 - 4.5.1. The Perturbation Method Approach / 125
 - 4.5.2. Discrete Time Systems / 128
 - 4.5.3. Uncertainties in Nonlinear System / 129
- REFERENCES / 130
- DEVELOPMENTAL EXERCISES / 130
- PROBLEMS / 132

5. MODAL CONTROL OF LINEAR DYNAMIC SYSTEMS / 148

- 5.1. STATE SPACE APPROACH TO LINEAR SYSTEMS CONTROL / 148
 - 5.1.1. Linear State Variable Feedback / 148
 - 5.1.2. The Eigenstructure Characteristics of Linear State Variable Feedback Systems / 153
 - 5.1.3. System Synthesis by State Variable Feedback: Eigenvalue Assignment / 160
 - 5.1.4. System Synthesis by State Variable Feedback: Eigenstructure Assignment / 172
 - 5.1.5. Linear State Variable Feedback with a Scalar Control Function / 178
 - 5.1.6. Controllability Considerations / 186
- 5.2. LINEAR OBSERVERS / 187
 - 5.2.1. Observers for Time-Invariant Linear Systems / 189
 - 5.2.2. Use of Observers in System Synthesis / 191
 - 5.2.3. Observability Considerations / 196
 - 5.2.4. Observer Design / 197

5.2.5.	Observer Design for Systems with a Scalar Output Function /	198
5.2.6.	Reduced-Order Observers /	202
5.2.7.	Reduced-Order Observer Design for Systems with a Scalar Output Function /	206
5.2.8.	General Reduced-Order Observer Design Concepts /	213
5.2.9.	Observers for Systems with Scalar Control Functions /	222
5.2.10.	Use of Observers to Estimate Bias Errors /	222
5.3.	DISCRETE TIME SYSTEMS /	225
5.3.1.	Discrete Time Linear State Variable Feedback /	226
5.3.2.	Observers for Discrete Systems /	227
5.3.3.	Reduced-Order Observers for Discrete Time Systems /	230
5.3.4.	Deadbeat Response in Discrete Time Linear Systems /	232
5.4.	INPUT-OUTPUT REPRESENTATION /	235
5.4.1.	Systems with State Variable Feedback /	236
5.4.2.	Systems with Number of Inputs Less than Number of States /	238
5.4.3.	Input-Output Decoupling Using State Variable Feedback: The General Case /	239
5.4.4.	Input-Output Decoupling Using Output Feedback /	245
5.5.	FURTHER CONSIDERATIONS /	249
5.5.1.	State Variable Feedback /	250
5.5.2.	Linear Observers /	251
5.5.3.	Discrete Time Observers /	251
5.5.4.	Input-Output Decoupling /	252
	REFERENCES /	252
	DEVELOPMENTAL EXERCISES /	255
	PROBLEMS /	255

6. OPTIMAL CONTROL OF DYNAMIC SYSTEMS / 262

6.1.	APPLICATION OF THE CALCULUS OF VARIATIONS /	262
6.1.1.	Free Terminal Conditions with Fixed Terminal Time /	263
6.1.2.	Terminal Constraints with Fixed Terminal Time /	266
6.1.3.	Terminal Constraints with Free Terminal Time: The General Case /	272
6.2.	OPTIMIZATION WITH CONTROL VARIABLE CONSTRAINTS /	278
6.2.1.	The Maximum Principle /	279
6.2.2.	Minimum Time Problems /	289
6.2.3.	Minimum Time Problems Involving Time Invariant Linear Systems /	291

6.2.4.	Minimum Energy Problems /	296
6.2.5.	Minimum Energy Problems Involving Time Invariant Linear Systems /	297
6.2.6.	Minimum Control Effort Problems /	298
6.2.7.	Minimum Control Effort Problems for Time Invariant Systems /	300
6.2.8.	The Constrained Linear Problem /	301
6.2.9.	Singular Intervals in Optimal Control /	302
6.2.10.	Corner Conditions in Optimal Control /	302
6.3.	UNCONSTRAINED LINEAR PROBLEMS /	304
6.3.1.	The Linear Controller and the Riccati Equation /	305
6.3.2.	The Linear Regulator /	314
6.3.3.	The Linear Follower /	319
6.3.3.1.	The Linear Regulator with Nonzero Set Point /	322
6.3.3.2.	The Linear Regulator with Time Varying Reference Function /	322
6.3.3.3.	The Output Follower /	323
6.4.	DISCRETE TIME SYSTEMS /	325
6.4.1.	Linear Controllers and Regulators /	326
6.4.2.	Linear Followers /	330
6.4.3.	The Time-Optimal Problem and Deadbeat Control /	332
6.5.	INACCESSIBLE STATE VARIABLES /	333
6.5.1.	Optimal Control of Linear, Time Invariant Systems with Inaccessible State Variables /	334
6.5.2.	Optimal Control of Linear, Time Invariant Systems with Noise-Contaminated Measurements /	338
6.6.	SOME FURTHER CONSIDERATIONS /	339
6.6.1.	Application of the Calculus of Variations /	340
6.6.2.	Optimization with Control Variable Constraints /	341
6.6.3.	Unconstrained Linear Problems /	341
6.6.4.	Discrete Time Systems /	345
6.6.5.	Inaccessible State Variables /	346
	REFERENCES /	346
	DEVELOPMENTAL EXERCISES /	351
	PROBLEMS /	351

7. OPTIMAL ESTIMATION AND FILTERING / 365

7.1.	POINT ESTIMATION /	365
7.1.1.	Parameter Estimation /	367
7.1.1.1.	Least Squares Linear Estimation /	367
7.1.1.2.	Weighted Least Squares Linear Estimation /	368

7.1.1.3.	Minimum Variance Unbiased Linear Estimation	/ 369
7.1.1.4.	Maximum Likelihood Estimation	/ 374
7.1.1.5.	Equivalencies for Normal Distributions	/ 377
7.1.1.6.	The Perturbation Method Approach to Nonlinear Parameter Estimation	/ 378
7.1.2.	Estimation of Random Variables	/ 382
7.1.2.1.	Minimum Mean-Squared Error Estimation	/ 383
7.1.2.2.	Maximum Posterior Probability Estimation	/ 384
7.1.2.3.	Estimation with Multivariate Normal Distributions	/ 385
7.1.2.4.	Relationship to Linear Regression	/ 393
7.1.3.	Recursive Forms	/ 394
7.1.3.1.	Recursive, Minimum Variance, Unbiased, Linear Estimation	/ 394
7.1.3.2.	Recursive, Minimum Mean-Squared Error Estimation	/ 398
7.2.	THE FILTERING PROBLEM	/ 399
7.2.1.	Linear Systems and the Kalman Filter	/ 400
7.2.1.1.	Alternate Forms of the Kalman Filter Equations	/ 405
7.2.1.2.	The Structure of the Kalman Filter	/ 407
7.2.1.3.	Restrictions Imposed on the Kalman Filter Equations	/ 407
7.2.2.	Relaxing Restrictions on the Kalman Filter Equations	/ 409
7.2.2.1.	Nonzero Mean Value Function	/ 409
7.2.2.2.	Correlated Input and Measurement Noise	/ 410
7.2.2.3.	Sequentially Correlated Input Noise	/ 411
7.2.2.4.	Sequentially Correlated Measurement Noise	/ 412
7.2.3.	Optimality of the Kalman Filter Equations	/ 418
7.2.4.	The Continuous Time Kalman Filter Equations	/ 420
7.2.5.	Time Invariant Kalman Filters	/ 424
7.2.5.1.	Discrete Time Filters	/ 426
7.2.5.2.	Continuous Time Filters	/ 427
7.3.	THE SMOOTHING PROBLEM	/ 430
7.3.1.	Fixed Point Smoothing	/ 431
7.3.2.	Fixed Lag Smoothing	/ 437
7.3.3.	Fixed Interval Smoothing	/ 447
7.3.4.	Time Invariant Smoothing	/ 449
7.4.	THE LINEAR STOCHASTIC CONTROL PROBLEM	/ 452
7.4.1.	The Separation Principle: Continuous Time Systems	/ 459
7.4.2.	The Separation Principle: Discrete Time Systems	/ 462

7.5. AN APPROACH TO NONLINEAR FILTERING: THE EXTENDED KALMAN FILTER /	463
7.6. FURTHER CONSIDERATIONS /	471
7.6.1. Estimation and Filtering /	474
7.6.2. The Smoothing Problem /	476
7.6.3. The Linear Stochastic Control Problem /	476
7.6.4. Nonlinear Filtering /	477
REFERENCES /	477
DEVELOPMENTAL EXERCISES /	481
PROBLEMS /	482

8. DYNAMIC PROGRAMMING AS A SYSTEM OPTIMIZATION TECHNIQUE / 497

8.1. DYNAMIC PROGRAMMING /	497
8.2. THE GENERAL PROBLEM /	498
8.3. DISCRETE STATE PROBLEMS /	503
8.3.1. Static Discrete State Examples /	503
8.3.2. A Dynamic Discrete State Example with Probabilistic Effects /	511
8.4. DYNAMIC PROGRAMMING APPROACH TO OPTIMAL CONTROL /	519
8.4.1. The Discrete Time Linear System /	521
8.4.2. The Discrete Time Linear Regulator /	526
8.4.3. The Continuous Time Equations /	527
8.4.4. Application to the Continuous Time Linear Problem /	531
8.4.5. Direct Application of Dynamic Programming to Optimal Control /	531
8.4.6. Application to the Stochastic Problem /	535
8.5. FURTHER COMMENTS /	536
8.5.1. Discrete State Problems /	536
8.5.2. Application to Control Systems /	537
REFERENCES /	537
PROBLEMS /	539

APPENDIX A. MATRIX OPERATIONS / 543

A.1. INTRODUCTION /	543
A.2. PARTITIONED MATRICES /	543

A.3.	DEFINED FORMALISM	/ 545
A.3.1.	Differentiation and Integration of a Matrix	/ 545
A.3.2.	Differentiation of Matrix Products	/ 548
A.4.	CHARACTERISTICS OF MATRICES	/ 550
A.4.1.	Definiteness of a Matrix	/ 550
A.4.2.	Trace of a Matrix	/ 552
A.5.	COORDINATE TRANSFORMATIONS	/ 553
A.5.1.	Diagonalization of Matrices	/ 554
A.5.2.	The Jordan Canonical Form	/ 557
A.6.	A USEFUL MATRIX IDENTITY	/ 558
	DEVELOPMENTAL EXERCISES	/ 560
	PROBLEMS	/ 560

APPENDIX B. OPTIMIZATION / 563

B.1.	APPLICATIONS OF CALCULUS TO OPTIMIZATION PROBLEMS	/ 563
B.1.1.	Optimization of Functions of More than One Variable	/ 565
B.1.2.	Constrained Problems in Two Dimensions	/ 568
B.1.3.	Constrained Problems in More than Two Dimensions	/ 571
B.1.4.	Inequality Constraints	/ 576
B.1.5.	The Linear Problem	/ 584
B.2.	THE CALCULUS OF VARIATIONS	/ 586
B.2.1.	The Constrained Variational Problem	/ 591
B.2.2.	The Variational Problem in More than One Dimension	/ 594
	REFERENCES	/ 598
	DEVELOPMENTAL EXERCISES	/ 599
	PROBLEMS	/ 599

APPENDIX C. THE SOLUTION OF LINEAR EQUATIONS / 607

C.1.	THE CANONICAL FORMS FOR N TH ORDER LINEAR DIFFERENTIAL EQUATIONS	/ 607
C.2.	THE TRANSITION MATRIX	/ 607
C.3.	METHODS OF DETERMINING THE TRANSITION MATRIX	/ 610
	DEVELOPMENTAL EXERCISES	/ 615
	PROBLEMS	/ 615

APPENDIX D. A COMPARISON OF MODERN AND CLASSICAL CONTROL THEORY / 618

- D.1. HISTORICAL PERSPECTIVE / 618
- D.2. CONTINUOUS TIME SYSTEMS / 618
 - D.2.1. Single Input-Single Output Systems / 619
 - D.2.2. Multiple Input-Multiple Output Systems / 622
 - D.2.3. Closed-Loop Response / 623
 - D.2.3.1. Realization Considerations / 626
 - D.2.3.2. Minor Loop Equalization / 627
 - D.2.3.3. Series Compensation / 629
 - D.2.3.4. Use of Observers / 630
- D.3. DISCRETE TIME SYSTEMS / 631
 - D.3.1. Single Input-Single Output Systems / 631
 - D.3.2. Closed-Loop Response / 633
 - D.3.3. Multiple Input-Multiple Output Systems / 634
- D.4. SUMMARY / 634
- REFERENCES / 635
- DEVELOPMENTAL EXERCISES / 635
- PROBLEMS / 636

INDEX / 641
