<i>Overview of the Work</i>	xiii
<i>Acknowledgments</i>	xv
1 Metal–Organic Framework-Based Electromagnetic Wave Absorption Materials	1
<i>Zijing Li</i>	
1.1 Brief Introduction to Metal–Organic Frameworks	1
1.2 Preparation Method of MOF Materials	2
1.2.1 Solvothermal Method	3
1.2.2 Microwave-Assisted Synthesis Method	4
1.2.3 Electrochemical Synthesis Method	5
1.2.4 Ultrasonic Method	7
1.2.5 Mechanochemistry Method	8
1.2.6 Steam-Assisted Conversion Method	9
1.2.7 Fluid Chemistry Method	9
1.3 MOF-Derived EMW Absorption Materials	11
1.3.1 Monometallic MOF-Derived Absorption Materials	12
1.3.2 Multi-metal MOF-Derived Absorption Materials	12
1.3.3 MOF-Carbon Composite Absorption Materials	14
1.3.4 MOF-MXene Composite Absorption Materials	20
1.3.5 MOF-Conductive Polymer Composite Absorption Materials	22
1.4 Summarize and Prospect	22
References	24
2 2D MXenes for Electromagnetic Wave Absorption	31
<i>Weibin Deng</i>	
2.1 Introduction to MXenes	32
2.2 Preparation Method of MXenes	32
2.2.1 Top-Down Strategy	34
2.2.1.1 HF Etching	34
2.2.1.2 In Situ HF Etching	34
2.2.1.3 Alkaline Solution Chemical Etching	35
2.2.1.4 Electrochemical Etching	36
2.2.1.5 Molten Salt Etching	36
2.2.2 Bottom-Up Strategies	36
2.2.2.1 Chemical Vapor Deposition	36

2.3	The Properties of MXenes	37
2.3.1	Morphologies and Surface Chemistries	37
2.3.2	Mechanical Properties	37
2.3.3	Electronic, Transport, and Band Gap Properties	38
2.3.4	Thermal Stability Properties	39
2.4	Electromagnetic Wave Absorption Performance of Pure MXenes	39
2.4.1	Content	39
2.4.2	Functional Groups and Defects	40
2.4.3	Size	41
2.4.4	Interlayer Spacing	42
2.4.5	Doping	42
2.4.6	Self-Transformation	43
2.5	Classification of MXenes in EMW Absorbing Materials	44
2.5.1	Component Optimization	44
2.5.1.1	Dielectric Materials	44
2.5.1.2	Magnetism	48
2.5.1.3	Multiple Loss Materials	51
2.5.2	Structural Regulation	52
2.5.2.1	3D Microsphere	52
2.5.2.2	Fiber	55
2.5.2.3	Sandwich Structure	56
2.5.2.4	Hierarchical Structure	58
2.6	The Application Prospects of MXenes in EMW-Absorbing Materials	58
	References	59

3 High-Entropy Electromagnetic Wave Absorption Materials 67

Shengchong Hui

3.1	The Concept and Features of High-Entropy Materials	67
3.1.1	The Definition of High-Entropy Materials	67
3.1.2	Broaden Elemental Combination and Microstructure	68
3.1.3	Dialectical View of Single-Phase Solid Solution Properties	69
3.1.4	The Theoretical Approach of Phase Selection in HEM	70
3.1.5	Four Core Effects of HEM	70
3.1.5.1	“High-Entropy” Effect	70
3.1.5.2	“Lattice Distortion” Effect	70
3.1.5.3	“Sluggish Diffusion” Effect	71
3.1.5.4	“Cocktail” Effect	71
3.2	The Synthesis Approach and Advanced Characterization of HEM	71
3.2.1	HEM Synthesis	72
3.2.1.1	Traditional Template Sintering Method	72
3.2.1.2	High-Temperature “Thermal Shock” Method	74
3.2.1.3	HEM Synthesis Strategy Under Mild Conditions	74
3.2.2	Advanced Characterization of HEM	75

3.3	High-Entropy Electromagnetic Wave Absorption Materials	77
3.3.1	High-Entropy Alloy	77
3.3.2	High-Entropy Oxide	80
3.3.3	High-Entropy Sulfide	83
3.4	The Challenge and Prospects of HEM	85
	References	86
4	Novel Microscopic Electromagnetic Loss Mechanisms	91
	<i>Hongsheng Liang</i>	
4.1	Novel Dielectric Loss Mechanisms	91
4.1.1	Synergistic Effects of Selenium-Sulfur Co-Doping-Induced Dielectric Polarization	91
4.1.2	Synergistic Effects of Hybridization State-Induced Dielectric Polarization	94
4.1.3	Synergistic Effects of Twin Structure-Induced Dielectric Polarization	95
4.1.4	Synergistic Effects of 3D Orbitals Unpaired Electron-Induced Dielectric Polarization	98
4.1.5	Interpretation of Energy Band Theory in Dielectric Loss	99
4.1.6	Defect-Induced Polarization Loss in Multi-Shelled Spinel Hollow Spheres	101
4.2	Novel Microscopic Magnetic Loss Mechanisms	103
4.2.1	Magnetic Losses Induced by the Sequence Structure of Metallic Magnetic Chains	104
4.2.2	Multi-Model Sequence Structure for Improving Magnetic Loss	106
4.2.3	Enhanced Magnetic Coupling in Hollow Porous Carbon Three-Dimensional Magnetic Networks	108
4.2.4	Enhanced Magnetic Coupling Through Core-Shell Structural Design	110
4.3	Conclusion and Outlook	112
	References	113
5	Bridging Mechanisms Between Micro and Macro	117
	<i>Geng Chen, Tao Zhang, and Yuntong Wang</i>	
5.1	Introduction to Micro Factors	118
5.1.1	Defects	118
5.1.2	Interfaces	119
5.1.3	Conductivity	123
5.1.4	Dipole	126
5.1.5	Saturation Magnetization	128
5.2	Regulation of Microscopic Attributes	130
5.2.1	Conventional Regulation	130
5.2.2	Physical External Fields Regulation	133
5.3	The Current State and Future Potential of Bridge Mechanism Between Micro and Macro Levels	137
	References	139

6	New Dielectric Physical Models for Electromagnetic Wave Absorption	145
	<i>Hongsheng Liang</i>	
6.1	Dielectric Microphysical Model	145
6.1.1	Dimension Distribution-Induced Interfacial Polarization Model	145
6.1.2	Three Types of Polarization Site Models	148
6.1.3	Electron Hopping and Electron Migrating Model	149
6.1.4	Three-Dimensional Conductive Network Model in Foam	151
6.1.5	Disordered Structure on the Atomic Scale–High-Entropy Models	153
6.2	Physical Models Related to Structural Design	156
6.2.1	Hierarchical Structural Models for Improved Impedance Matching	156
6.2.2	Core–Shell Structure Model	157
6.2.3	Double-Shell Structure Model	161
6.3	Intelligent Off/On Switchable Model	162
6.4	Conclusion and Outlook	165
	References	166
7	Integrated Foam-Type Electromagnetic Wave Absorption Materials	169
	<i>Qing Chang</i>	
7.1	Carbon-Based Foam for EMW Absorption	169
7.1.1	Pure Carbon-Based Foams	170
7.1.2	Composite Foams Formed by Carbon Material	172
7.1.3	Composite Foams of Carbon Material and Magnetic Metal	174
7.1.4	Composite Foams of Carbon Material and Metal Oxides	176
7.1.5	Composite Foams of Carbon Material and Ceramic Materials	180
7.1.6	Composite Foams of Carbon Material and MXene	182
7.2	Ferrite-Based Foam for EMW Absorption	185
7.3	SiC-Based Foam for EMW Absorption	188
7.4	Conductive Polymer Composites Foam for EMW Absorption	191
