1	Introduction to Basic Equations and Kinetic Theory	
	of Granular Flow	1
1.1	Basic Methods	2
1.2	Conservations Laws	3
1.2.1	Mass Balances	3
1.2.2	Momentum Balances	4
1.2.3	Energy Balances	7
1.3	Conservation Equations of Fluid–Solid Two-Fluid Models	8
1.4	Kinetic Theory of Granular Flow	12
1.4.1	Granular Constitutive Equations	15
1.4.2	Low-Knudsen-Number GTSH Model	18
1.4.3	MFIX KT Model	20
1.4.4	Granular Conductivity and Energy Dissipations	23
1.4.5	Algebraic Granular Energy Equation	25
1.5	Hybrid Theories of Granular Flow	26
1.5.1	Schaeffer, Johnson-Jackson and Syamlal Frictional Models	27
1.5.2	Srivastava-Sundaresan Frictional Model	29
1.5.3	Inertial Number-Based Frictional Model	30
1.5.4	Configurational Temperature-Based Frictional Model	32
1.5.5	Stress-Blending Function	36
1.6	Boundary Conditions	37
1.7	Summary	38
	References	41
2	CFD-DEM Approach for Fluid-Particles Flow	45
2.1	Euler-Lagrangian Fluid–Solid Flow Model	46
2.1.1	Fluid Phase Conservation Equations	46
2.1.2	Equations of Discrete Particles	48
2.2	Contact Forces of Particles	49
2.2.1	Force-Displacement Law	49

2.2.2	Linear Viscoelastic Model	51
2.2.3	Nonlinear Viscoelastic Model	53
2.2.4	Hertz-Mindlin Contact Model	54
2.2.5	Hertz-Mindlin with JKR Model	55
2.2.6	Hysteretic Spring Contact Model	58
2.2.7	Edinburgh Elasto-plastic Adhesion Contact Model	60
2.2.8	Hertz-Mindlin with Bonding Model	63
2.3	Momentum Coupling and Decomposition	65
2.3.1	Fluid-Particle Interaction Force	66
2.3.2	Drag Force	67
2.3.3	Unsteady Force and Lift Force	68
2.3.4	Bridge Force and van der Waals Force	70
2.3.5	Magnetic and Electrostatic Forces	73
2.3.6	Vibration and Acoustic Fields	77
2.3.7	Torque Expressions	78
2.4	Initial and Boundary Conditions	79
2.5	Calibration of DEM Parameters	80
2.5.1	Dropping Test of Virtual Angle of Repose	81
2.5.2	Ring Shear Tests for Virtual Shear Stress	83
2.5.3	Compression Test for Virtual Modulus	85
2.6	Summary	86
	References	88
3	Fluid-Solid Two-Phase CFD-KTGF-DEM Approach	91
3.1	CFD-KTGF-DEM Approach	93
3.1.1	Euler Fluid Phase	94
3.1.2	Euler Granular Phase	97
3.1.3	Lagrangian Discrete Particles	101
3.2	CFD-KTGF-DEM Coupling	103
3.2.1	Coupling of Interfacial Momentum	103
3.2.2	Coupling of Pressure and Shear Stress	104
3.2.3	Coupling of Interactions of Collisions	105
3.3	Ghost Fluid	109
3.4	Dynamic Granular Restitution Coefficients	111
3.5	Energy Dissipations of Granular Phase and Discrete Particles	116
3.6	Summary	118
	References	121
4	Low-Stokes-Number Kinetic Theory of Granular Flow	125
4.1	Kinetic Transport	128
4.1.1	Solution of Kinetic Equation	134

4.1.2	Viscous Kinetic Stress Tensor	137
4.2	Dense Transport Theorem	140
4.3	Granular Constitutive Relations	143
4.4	Granular Conductivity	147
4.5	Constitutive Relations of Low-Stokes-Number KTGF	149
4.6	Summary	151
	References	153
5	Minimum Rate of Energy Dissipation and Interfacial Momentum Closure of Heterogeneous Flow Structures	157
5.1	Homogeneous Fluid-Particle Momentum Exchange Coefficient	158
5.1.1	Gidaspow Drag Coefficient Model	159
5.1.2	Syamlal-O'Brien Drag Coefficient Model	161
5.1.3	Huilin-Gidaspow Drag Coefficient Model	162
5.1.4	Gibilaro Drag Coefficient Model	163
5.2	Particle-Resolved DNS-Based Drag Models	163
5.2.1	Hill-Koch-Ladd Drag Coefficient Model	164
5.2.2	Beestra-van der Hoef-Kuipers Drag Coefficient Model	165
5.2.3	Holloway-Yin-Sundaresan Drag Coefficient Model	166
5.2.4	Qi-Kuang-Qiu-Yu Drag Coefficient Model	167
5.2.5	Tenneti-Garg-Subramaniam Drag Model	168
5.3	Filtered or Subgrid Exchange Coefficient Model	169
5.4	Energy Minimization Multi-scale Drag Model	177
5.5	Minimum Rate of Energy Dissipation-Based Drag Model	181
5.5.1	Criterion for Identification of Clusters	181
5.5.2	MRED-Based Drag Coefficient	187
5.5.3	Transient Equations of Dilute and Dense Phases	189
5.5.4	Solution of Minimum Energy Dissipation Rates	192
5.5.5	Minimum Rate of Energy Dissipation of Clusters	195
5.6	Compromise in Competition of Multiple Mechanisms	197
5.7	Summary	202
	References	205
