Foreword.....	vii
Preface	ix
Using This Book Interactively	xiii

Part I Systems in One Dimension **3**

1. Basic Wave Mechanics **5**

1.1 Equations of Motion	6
1.2 Stationary States	9
1.3 A Well-Posed Problem	9
1.4 Time-Development Operator	10
1.5 Extra Dimensions	11

2. Particle in a Box **13**

2.1 Analytical Eigenfunctions	13
2.2 Numerical Eigenfunctions	16
2.3 Two Basic Properties.....	18
2.4 Rectangular Wave.....	19
2.5 Quantum Rattle	24
2.6 Measurements.....	29

3. Uncertainty Principle **31**

4. Free-Particle Wavepacket **35**

4.1 Stationary Wavepacket	36
4.2 Moving Wavepacket.....	38

5. Parity **45**

6. Harmonic Oscillator **51**

6.1 Scaled Schrödinger Equation	52
---------------------------------------	----

6.2	Method of Solution	53
6.3	Energy Spectrum	54
6.4	Hermite Polynomials	58
6.5	Hypergeometric Functions.....	62
6.6	Normalized HO Wavefunctions	67
6.7	Raising and Lowering Operators.....	73
7.	Variational Method and Perturbation Ideas	75
7.1	HO Ground State Variationally	76
7.2	HO Excited State Variationally.....	77
7.3	Model Hamiltonian	79
7.4	First-Order Perturbation Energy	82
8.	Squeezed States	85
8.1	Eigenfunction Expansion	87
8.2	Time Evolution	90
8.3	Newton's Laws	94
8.4	Quasi-Classical States	97
9.	Basic Matrix Mechanics	101
9.1	HO Coordinate and Momentum Matrix Elements	102
9.2	HO Coordinate and Momentum Matrices	103
9.3	HO Hamiltonian Matrix	104
10.	Partial Exact Diagonalization	107
10.1	Model-Hamiltonian Matrix	108
10.2	Matrix Eigenvalues and Eigenvectors.....	110
10.3	Perturbed Eigenfunctions	113
10.4	Local Energy.....	115
10.5	Pseudo States and Resonances	116
10.6	Diagonalization	116
11.	Momentum Representation	121
11.1	Tools	121
11.2	Momentum Wavefunctions	124
11.3	Conventions.....	125
11.4	HO Momentum Wavefunctions.....	126
11.5	Dirac Delta Function.....	128
11.6	Momentum Operator.....	131
11.7	Local Energy.....	133
11.8	Coordinate Operator	134
11.9	Momentum-Space Hamiltonian	135
11.10	Exponential Operators.....	136
11.11	More Squeezed States	139

12. Lattice Representation	145
12.1 Coordinate Lattice	145
12.2 Momentum Lattice	150
12.3 Discrete Fourier Transforms	153
12.4 Local Energy	157
12.5 FFT	159
12.6 Wavepacket Propagation	164
12.7 Quantum Diffusion	180
13. Morse Oscillator	189
13.1 Kummer's Equation	190
13.2 Eigenenergies	193
13.3 Eigenfunctions	195
13.4 Normalization	196
13.5 Hypergeometric Integrals	200
14. Potential Scattering	205
14.1 Numerical Solution	206
14.2 Scattering Amplitudes	209
14.3 Resonance Hunting	215
14.4 Radial Wavefunctions	218
14.5 Resonance Parameterization	220
14.6 Wavepacket Impact	225
Part II Quantum Dynamics	237
15. Quantum Operators	239
15.1 Commutator Algebra	240
15.2 Two-Body Relative Coordinates	245
15.3 Bra-Ket Formalism	249
15.4 Harmonic Oscillator Spectrum	251
16. Angular Momentum	253
16.1 Angular Momentum Spectrum	256
16.2 Matrix Representation	258
16.3 New Axis of Quantization	261
16.4 Quantum Rotation Matrix	264
17. Angular Momentum Coupling	267
17.1 Spin and Orbital Coupling	271
17.2 Total Angular Momentum Spectrum	274
17.3 Clebsch Gordanary	277
17.4 Wigner 3j Symbols	281
17.5 Recoupling Coefficients	283

18. Coordinate and Momentum Representations	287
18.1 Position and Momentum Operators	287
18.2 Commutation Relations	289
18.3 Angular Momentum in Cartesian Coordinates	292
18.4 Rotational Symmetry	293
18.5 Dynamical Symmetry	296
18.6 Runge-Lenz Vector	298
18.7 Hydrogen Atom Spectrum	300
19. Angular Momentum in Spherical Coordinates	303
19.1 Spherical Harmonics	308
19.2 New Axis of Quantization	313
19.3 Quantum Rotation Matrix	316
20. Hydrogen Atom Schrödinger Equation	323
20.1 Separation in Spherical Coordinates	324
20.2 Bound-State Wavefunctions	326
20.3 Parity	333
20.4 Continuum Wavefunctions	335
20.5 Separation in Parabolic Coordinates	338
21. Wavefunctions from the Runge-Lenz Algebra	345
21.1 Raising and Lowering Operators	345
21.2 Top-Rung States	348
21.3 Down the Ladder	351
21.4 Connection with the Parabolic Separation	353
21.5 Linear Stark Effect	357
21.6 Connection with the Spherical Separation	364
Appendix I. Mathematica Quick View	369
Appendix II. Notebooks and Basic Tools	371
AII.1 Projectile Motion Ignoring Air Resistance	371
AII.2 Including Air Resistance	378
Appendix III. Home Improvement	383
AIII.1 Functions	384
AIII.2 Algebra	398
AIII.3 Computing	415
Appendix IV. Quantum Packages	423
AIV.1 Quantum 'Clebsch'	423
AIV.2 Quantum 'integExp'	425
AIV.3 Quantum 'integGauss'	425
AIV.4 Quantum 'NonCommutativeMultiply'	426
AIV.5 Quantum 'PowerTools'	427

AIV.6	Quantum 'QuantumRotations '	428
AIV.7	Quantum 'QuickRelm '	430
AIV.8	Quantum 'Trigonometry '	431
Appendix V. Grad, Div, Curl		433
AV.1	Vector Products	433
AV.2	Cartesian Coordinates	436
AV.3	Curvilinear Coordinates	445
AV.4	Spherical Coordinates	448
Bibliography		465
Index		469
