

Contents

Table of Contents	v
Concept Map of the Contents	ix
Preface	xi
Acknowledgements	xvi
1 The Basics	1
1.1 Definition and Examples	1
1.2 The Diagram	4
1.3 Order-Preserving Mappings/Isomorphism	9
1.4 Fixed Points	12
1.5 Ordered Subsets/The Reconstruction Problem	15
Exercises	19
Remarks and Open Problems	22
2 Chains, Antichains and Fences	25
2.1 Chains and Zorn's Lemma	25
2.2 Well-ordered Sets	29
2.3 A Remark on Duality	32
2.4 The Rank of an Element	34
2.5 Antichains and Dilworth's Chain Decomposition Theorem	36
2.6 Dedekind Numbers	39
2.7 Fences and Crowns	42
2.8 Connectivity	44
Exercises	47
Remarks and Open Problems	51

3	Upper and Lower Bounds	55
3.1	Extremal Elements	55
3.2	Covers	62
3.3	Lowest Upper and Greatest Lower Bounds	64
3.4	Chain-Completeness and the Abian–Brown Theorem	69
	Exercises	72
	Remarks and Open Problems	76
4	Retractions	77
4.1	Definition and Examples	77
4.2	Fixed Point Theorems	81
	4.2.1 Removing Points	82
	4.2.2 The Comparable Point Property	84
4.3	Dismantlability	86
	4.3.1 (Connectedly) Collapsible Ordered Sets	90
4.4	The Fixed Point Property for Ordered Sets of Width 2 or Height 1	91
	4.4.1 Width 2	91
	4.4.2 Height 1	92
	4.4.3 Minimal Automorphic Ordered Sets	93
	4.4.4 A Fixed Point Property for Graphs?	94
4.5	Li and Milner’s Structure Theorem	95
4.6	Isotone Relations	101
	Exercises	103
	Remarks and Open Problems	108
5	Lattices	111
5.1	Definition and Examples	111
5.2	Fixed Point Results/The Tarski–Davis Theorem	114
	5.2.1 Preorders/The Bernstein–Cantor–Schröder Theorem	114
	5.2.2 Other Results on the Structure of Fixed Point Sets	116
5.3	Embeddings/The Dedekind–MacNeille Completion	119
5.4	Irreducible Points in Lattices	122
5.5	Finite Ordered Sets vs. Distributive Lattices	123
5.6	More on Distributive Lattices	126
	Exercises	130
	Remarks and Open Problems	135
6	Truncated Lattices	137
6.1	Definition and Examples	137
6.2	Recognizability and More	138
6.3	The Fixed Clique Property	141
	6.3.1 Simplicial Complexes	143
	6.3.2 The Fixed Point Property for Truncated Lattices	147
6.4	Triangulations of S^n	148
6.5	Cutsets	152

6.6	Truncated Noncomplemented Lattices	154
	Exercises	156
	Remarks and Open Problems	158
7	The Dimension of Ordered Sets	161
7.1	(Linear) Extensions of Orders	161
7.2	Balancing Pairs	164
7.3	Defining the Dimension	168
7.3.1	A Characterization of Realizers	171
7.4	Bounds on the Dimension	173
7.5	Ordered Sets of Dimension 2	176
	Exercises	178
	Remarks and Open Problems	182
8	Interval Orders	185
8.1	Definition and Examples	185
8.2	The Fixed Point Property for Interval Orders	189
8.3	Dedekind's Problem for Interval Orders and Reconstruction	190
8.4	Interval Dimension	193
	Exercises	195
	Remarks and Open Problems	198
9	Lexicographic Sums	201
9.1	Definition and Examples	201
9.2	The Canonical Decomposition	206
9.3	Comparability Invariance	208
9.4	Lexicographic Sums and Reconstruction	213
9.5	An Almost Lexicographic Construction	217
	Exercises	219
	Remarks and Open Problems	224
10	Sets $P^Q = \text{Hom}(Q, P)$ and Products	227
10.1	Sets $P^Q = \text{Hom}(Q, P)$	227
10.2	Finite Products	230
10.2.1	Finite Products and the Fixed Point Property	233
10.3	Infinite Products	237
10.4	Hashimoto's Theorem and Automorphisms of Products	240
10.4.1	Automorphisms of Products	248
10.5	Arithmetic of Ordered Sets	251
	Exercises	255
	Remarks and Open Problems	259
11	Enumeration	263
11.1	Graded Ordered Sets	264
11.2	The Number of Graded Ordered Sets	265

11.3	The Asymptotic Number of Graded Ordered Sets	268
11.4	The Number of Nonisomorphic Ordered Sets	277
11.5	The Number of Automorphisms	282
	Exercises	285
	Remarks and Open Problems	289
12	Algorithmic Aspects	295
12.1	Algorithms	296
12.2	Polynomial Efficiency	299
12.3	NP problems	303
12.3.1	Constraint Satisfaction Problems (CSPs)	305
12.3.2	Expanded Constraint Networks/ Cliques in r -colored Graphs	308
12.4	NP-completeness	309
12.5	So It's NP-complete...	312
12.5.1	Search Algorithms	313
12.5.2	Algorithms That Enforce Local Consistency	318
12.6	A Polynomial Algorithm for the Fixed Point Property in Graded Ordered Sets of Bounded Width	324
	Exercises	326
	Remarks and Open Problems	332
A	A Primer on Algebraic Topology	337
A.1	Chain Complexes	338
A.2	The Lefschetz Number	341
A.3	(Integer) Homology	342
A.4	A Homological Reduction Theorem	344
	Remarks and Open Problems	349
B	Order vs. Analysis	351
B.1	The Spaces $L^p(\Omega, \mathbb{R})$	351
B.2	Fixed Point Theorems	352
B.3	An Application	354
	Remarks and Open Problems	356
	References	359
	Index	377
