Introduction xxiii

Part I Passive Vibration Protection

1 Vibration Isolation of a System with One or More Degrees of Freedom 3

1.1 Design Diagrams of Vibration Protection Systems 3

1.2 Linear Viscously Damped System. Harmonic Excitation and Vibration Protection Criteria 5

1.2.1 Simplest Mechanical Model of a Vibration Protection System 6

1.2.2 Force Excitation. Dynamic and Transmissibility Coefficients 6

1.2.3 Kinematic Excitation. Overload Vibration Coefficient and Estimation of Relative Displacement 10

1.3 Complex Amplitude Method 15

1.3.1 Vector Representation of Harmonic Quantities 15

1.3.2 Single-Axis Vibration Isolator 17

1.3.3 Argand Diagram 19

1.3.4 System with Two Degrees of Freedom 20

1.4 Linear Single-Axis Vibration Protection Systems 21

1.4.1 Damper with Elastic Suspension. Transmissibility Coefficient 22

1.4.2 Simplification of Vibration Isolators 24

1.4.3 Vibration Isolators Which Cannot Be Simplified 26

1.4.4 Special Types of Vibration Isolators 26

1.5 Vibration Protection System of Quasi-Zero Stiffness 28

Problems 32

Part IV Special Topics

16 Rotating and Planar Machinery as a Source of Dynamic Exposures on a Structure 605

16.1 Dynamic Pressure on the Axis of a Rotating Body 605

16.2 Types of Unbalancing Rotor 609

16.2.1 Static Unbalance 609

16.2.2 Couple Unbalance 610

16.2.3 Dynamic Unbalance 610

16.2.4 Quasi-Static Unbalance 611

16.3 Shaking Forces of a Slider Crank Mechanism 612

16.3.1 Dynamic Reactions 614

16.3.2 Elimination of Dynamic Reactions 617

Problems 618

References 622

17 Human Operator Under Vibration and Shock 623

17.1 Introduction 623

17.1.1 Vibration Exposures and Methods of Their Transfer on the Person 624

17.1.2 International and National Standards 628

17.2 Influence of Vibration Exposure on the Human Subject 628

17.2.1 Classification of the Adverse Effects of Vibration on the Person 629

17.2.2 Effect of Vibration on the Human Operator 631

17.3 Vibration Dose Value 635

17.4 Mechanical Properties and Frequency Characteristics of the Body 639

17.4.1 Mechanical Properties of the Human Body 640

17.4.2 Frequency Characteristics of the Human Body 642

17.5 Models of the Human Body 645

17.5.1 Basic Dynamic 1D Models 647

17.5.2 Dynamic 2D–3D Models of the Sitting Human Body at the Collision 651

17.5.3 Parameters of the Human Body Model 653
