

Table of contents

Foreword	xi
Preface	xiii
Acknowledgements	xv
Nomenclature	xvii
1. Introduction	1
1.1 Optical water quality	1
1.2 'Aquatic optics' — the behaviour of light in water	3
1.3 Scope and purpose of the book	4
1.4 Structure of the book	5
2. Concepts	9
2.1 Introduction—water as an optical medium	9
2.2 Inherent optical properties of water	11
2.3 Apparent optical properties of water	14
2.4 Light-attenuating constituents of water	17
2.4.1 Water itself	18
2.4.2 Suspensoids	20
2.4.3 Phytoplankton	26
2.4.4 Organic detritus and yellow substance	28
2.5 Clarity of waters	30
2.5.1 Visual clarity	31
2.5.2 Light climate for aquatic plants	34
2.6 Water colour	38
2.6.1 Intrinsic water colour	38
2.6.2 Irradiance reflectance	41
2.6.3 The concept of colour applied to water	41

vi **Table of contents**

2.6.4	Chromaticity	43
2.7	Synthesis	48
3.	Measurement	49
3.1	Introduction	49
3.2	Apparent optical properties	50
3.2.1	Vector irradiance	52
3.2.2	Scalar irradiance and spectral irradiance	56
3.3	Inherent optical properties	58
3.3.1	Beam attenuation	58
3.3.2	Absorption measurements by spectrophotometer	60
3.3.3	Scattering measurements	64
3.3.4	Estimation of the IOPs from measurement of the AOPs	68
3.4	Water clarity	71
3.4.1	The Secchi disc	71
3.4.2	The black disc	72
3.4.3	Light penetration into water bodies	76
3.5	Water colour	78
3.5.1	Traditional measures of water 'colour'	78
3.5.2	Brightness	79
3.5.3	Chromaticity analysis	79
3.5.4	Matching water colour	83
3.6	Determinants of water colour and clarity	84
3.6.1	Yellow substance	84
3.6.2	Suspended solids	85
3.6.3	Phytoplankton	89
3.6.4	Detritus	91
3.7	Optical monitoring of water quality	92
3.7.1	Suspended solids	92
3.7.2	Organic matter	93
3.7.3	Remote sensing	94
4.	Colour and clarity in different aquatic environments	97
4.1	Introduction	97
4.1.1	Lakes	98
4.1.2	Rivers	98
4.1.3	Estuaries	99
4.2	Lakes	100
4.2.1	Sources of light-attenuating constituents	100
4.2.2	Traditionally measured optical properties	101
4.2.3	Absorption and scattering	107
4.2.4	Lakewater appearance	109
4.2.5	Underwater light for plant growth	112
4.3	Rivers	115
4.3.1	Light-attenuating constituents of river waters	115
4.3.2	Visual clarity	118

4.3.3	Light penetration	124
4.3.4	Colour	125
4.4	Estuaries	129
4.4.1	Suspended solids and the turbidity maximum	130
4.4.2	Light absorption in estuaries	130
4.4.3	Clarity and brightness	132
4.4.4	Light climate for plant growth	136
4.5	Comparisons	138
5.	Managing colour and clarity	144
5.1	Introduction	144
5.2	Review of international criteria and guidelines	145
5.2.1	Aesthetics and recreational water use	146
5.2.2	Protection of aquatic life	149
5.2.3	Other uses	151
5.3	Development of improved guidelines for optical water quality	152
5.3.1	Philosophy	152
5.3.2	Visual clarity	153
5.3.3	Light penetration	156
5.3.4	Colour	158
5.3.5	Summary of the guidelines	161
5.3.6	Implementation of the guidelines	163
5.4	Point discharges of light-attenuating materials	167
5.4.1	Urban stormwater	167
5.4.2	Municipal sewage	170
5.4.3	Waste stabilization pond effluents	172
5.4.4	Meat processing wastewaters	173
5.4.5	Pulp and paper wastewaters	174
5.4.6	Mining wastewaters	175
5.4.7	Other point discharges	177
5.5	Control of suspended solids from soil erosion	178
5.5.1	Philosophy	179
5.5.2	Factors affecting soil erosion	181
5.5.3	Construction and surface mining	186
5.5.4	Agriculture and forestry	188
5.6	Control of phytoplankton	192
5.6.1	Phytoplankton targets for lakes	192
5.6.2	In-lake control of biomass	195
5.6.3	Control by nutrient reduction	196
6.	Case studies	200
6.1	Introduction	200
6.2	Lake Coleridge: effects of turbid glacial waters on optical water quality	201
6.2.1	Background	201
6.2.2	Methods	203
6.2.3	Optical character of Lake Coleridge	203

viii Table of contents

6.2.4	Effect of the diversion water on optical quality	204
6.2.5	Optical model for Lake Coleridge — inferred changes in optical character	206
6.3	Lake Whangape: changed optical quality linked to macrophyte decline	208
6.3.1	Background	208
6.3.2	Macrophytes	209
6.3.3	Suspended solids and the light climate	210
6.3.4	Collapse of the macrophyte stands	211
6.4	Lakes Rotorua and Okaro: light attenuation in two contrasting lakes	213
6.4.1	Background	213
6.4.2	Optical quality monitoring	215
6.4.3	Water quality and light attenuation	216
6.4.4	Determinants of light attenuation	217
6.4.5	Discussion	219
6.5	Lake Horowhenua: changes in optical water quality following sewage effluent diversion	220
6.5.1	Background	220
6.5.2	Monitoring	221
6.5.3	Findings	221
6.5.4	Discussion	225
6.6	Tarawera River: effects of Kraft effluent on optical water quality	225
6.6.1	Background	225
6.6.2	Characterisation of the optical quality impacts	227
6.6.3	Detectability of change in river water colour	229
6.7	Whanganui River: effects of tributary diversion on optical water quality	229
6.7.1	Background	229
6.7.2	Methods	231
6.7.3	Results of the monitoring programme	232
6.7.4	Effects of the diversions on river water clarity and colour	233
6.7.5	Discussion	236
7.	Future directions	237
7.1	Overview	237
7.2	Concepts (Chapter 2)	237
7.3	Measurement (Chapter 3)	238
7.3.1	Optical properties	238
7.3.2	Water clarity	238
7.3.3	Water colour	239
7.3.4	Light-attenuating constituents	239
7.4	Different aquatic systems (Chapter 4)	240
7.5	Management (Chapter 5)	241
7.5.1	Guidelines	241
7.5.2	Wastewaters	242
7.5.3	Soil erosion control	243
7.5.4	Phytoplankton control	243
7.6	Conclusion	243

References	244
Appendix 1 Radiation quantities and description of the light field in water	266
References	270
Appendix 2 Measurement recipes	271
A 2.1 Measurement of underwater irradiance profiles	271
A 2.2 Measurement of underwater beam transmittance for the calculation of beam attenuation coefficient	273
A 2.3 Absorption and scattering measurement by spectrophotometer. Part 1: absorption of dissolved organics ('colour' measurement) (yellow substance, <i>Gelbstoff</i> , gilvin)	275
A 2.4 Absorption and scattering measurement by spectrophotometer. Part 2: spectral absorption of total water constituents	277
A 2.5 Absorption and scattering measurement by spectrophotometer. Part 3: spectral absorption of particulate constituents	279
A 2.6 Absorption and scattering measurement by spectrophotometer. Part 4: scattering measurements	281
A 2.7 Nephelometric turbidity measurement	282
A 2.8 Measurement of visual water clarity by Secchi disc	284
A 2.9 Measurement of visual water clarity using a black disc ('black spot'). Part 1: in situ measurement	285
A 2.10 Measurement of visual water clarity using a black disc ('black spot'). Part 2: off-site measurement in a trough	288
A 2.11 Colour (hue) observations	289
References	291
Appendix 3 Discharge of light-attenuating effluents to a river: worked example calculations	293
Problem 1: discharge of clays from a settling pond	293
Problem 2: discharge of Kraft pulp mill effluent	297
References	300
Index	301
