

Table of contents

Foreword	5
1. Laplace transform	7
2. Using the Laplace transform to derive transfer functions	17
3. Inverse Laplace transform	30
4. Elementary models of plants. Impulse and step responses. Steady-state error	38
5. Sinusoidal transfer function. Frequency response	46
6. Block diagram algebra	61
7. Routh stability criterion	70
8. Hurwitz stability criterion	76
9. Nyquist stability criterion	82
10. Stability margins	90
11. Root locus method	99
12. Obtaining state-space equations – basic methods	127
13. Obtaining state-space equations – additional methods	138
14. Automatic control exercises using Matlab	153
15. Automatic control exercises using Scilab	157
References	160
