PREFACE TO THE FOURTH EDITION / xv

PREFACE TO THE FIRST EDITION / xxi

PART I STRUCTURES MODELED AS A SINGLE-DEGREE-OF-FREEDOM
SYSTEM 1

1 UNDAMPED SINGLE-DEGREE-OF-FREEDOM SYSTEM 3

- 1.1 Degrees of Freedom / 3
- 1.2 Undamped System / 5
- 1.3 Springs in Parallel or in Series / 6
- 1.4 Newton's Law of Motion / 8
- 1.5 Free Body Diagram / 9
- 1.6 D'Alembert's Principle / 10
- 1.7 Solution of the Differential Equation of Motion / 11
- 1.8 Frequency and Period / 13
- 1.9 Amplitude of Motion / 15
- 1.10 Undamped Single-Degree-of-Freedom Systems Using COSMOS / 20
- 1.11 Summary / 22
- Problems / 23

2 DAMPED SINGLE-DEGREE-OF-FREEDOM SYSTEM 31

- 2.1 Viscous Damping / 31
- 2.2 Equation of Motion / 32
- 2.3 Critically Damped System / 33
- 2.4 Overdamped System / 34
- 2.5 Underdamped System / 35
- 2.6 Logarithmic Decrement / 37
- 2.7 Summary / 43
- Problems / 44

3 RESPONSE OF ONE-DEGREE-OF-FREEDOM SYSTEM TO HARMONIC LOADING 47

- 3.1 Undamped System: Harmonic Excitation / 47
- 3.2 Damped System: Harmonic Excitation / 50
- 3.3 Evaluation of Damping at Resonance / 58
- 3.4 Bandwidth Method (Half-Power) to Evaluate Damping / 59
- 3.5 Energy Dissipated by Viscous Damping / 61
- 3.6 Equivalent Viscous Damping / 63
- 3.7 Response to Support Motion / 66
- 3.8 Force Transmitted to the Foundation / 76
- 3.9 Seismic Instruments / 79
- 3.10 Response of One-Degree-of-Freedom System to Harmonic Loading Using COSMOS / 81
- 3.11 Summary / 88
- Problems / 92

4 RESPONSE TO GENERAL DYNAMIC LOADING 96

- 4.1 Impulsive Loading and Duhamel's Integral / 96
- 4.2 Numerical Evaluation of Duhamel's Integral—Undamped System / 105
- 4.3 Numerical Evaluation of Duhamel's Integral—Damped System / 109
- 4.4 Response by Direct Integration / 110
- 4.5 Program 2—Response by Direct Integration / 116
- 4.6 Program 3—Response to Impulsive Excitation / 119
- 4.7 Response to General Dynamic Loading Using COSMOS / 124
- 4.8 Summary / 131
- Problems / 132

- 5 **FOURIER ANALYSIS AND RESPONSE IN THE FREQUENCY DOMAIN** 139
 - 5.1 Fourier Analysis / 139
 - 5.2 Response to a Loading Represented by Fourier Series / 140
 - 5.3 Fourier Coefficients for Piecewise Linear Functions / 143
 - 5.4 Exponential Form of Fourier Series / 144
 - 5.5 Discrete Fourier Analysis / 145
 - 5.6 Fast Fourier Transform / 148
 - 5.7 Program 4—Response in the Frequency Domain / 150
 - 5.8 Summary / 156
 - Problems / 156

- 6 **GENERALIZED COORDINATES AND RAYLEIGH'S METHOD** 162
 - 6.1 Principle of Virtual Work / 162
 - 6.2 Generalized Single-Degree-of-Freedom System—Rigid Body / 164
 - 6.3 Generalized Single-Degree-of-Freedom System—Distributed Elasticity / 167
 - 6.4 Shear Forces and Bending Moments / 172
 - 6.5 Generalized Equation of Motion for a Multistory Building / 177
 - 6.6 Shape Function / 180
 - 6.7 Rayleigh's Method / 185
 - 6.8 Improved Rayleigh's Method / 192
 - 6.9 Shear Walls / 195
 - 6.10 Summary / 199
 - Problems / 200

- 7 **NONLINEAR STRUCTURAL RESPONSE** 205
 - 7.1 Nonlinear Single Degree-of-Freedom Model / 206
 - 7.2 Integration of the Nonlinear Equation of Motion / 208
 - 7.3 Constant Acceleration Method / 208
 - 7.4 Linear Acceleration Step-by-Step Method / 211
 - 7.5 The Newmark Beta Method / 214
 - 7.6 Elastoplastic Behavior / 215
 - 7.7 Algorithm for the Step-by-Step Solution for Elastoplastic Single-Degree-of-Freedom System / 217
 - 7.8 Program 5—Response for Elastoplastic Behavior System / 221
 - 7.9 Nonlinear Structural Response Using COSMOS / 224
 - 7.10 Summary / 228
 - Problems / 229

x Contents

8 RESPONSE SPECTRA 233

- 8.1 Construction of Response Spectrum / 233
- 8.2 Response Spectrum for Support Excitation / 237
- 8.3 Tripartite Response Spectra / 238
- 8.4 Response Spectra for Elastic Design / 241
- 8.5 Influence of Local Soil Conditions / 245
- 8.6 Response Spectra for Inelastic Systems / 247
- 8.7 Response Spectra for Inelastic Design / 250
- 8.8 Program 6—Seismic Response Spectra / 257
- 8.9 Response Spectra Using COSMOS / 260
- 8.10 Summary / 265
Problems / 266

PART II STRUCTURES MODELED AS SHEAR BUILDINGS 271

9 THE MULTISTORY SHEAR BUILDING 271

- 9.1 Stiffness Equations for the Shear Building / 272
- 9.2 P - Δ Effect on a Plane Shear Building / 275
- 9.3 Flexibility Equations for the Shear Building / 278
- 9.4 Relationship Between Stiffness and Flexibility Matrices / 280
- 9.5 Program 7—Modeling Structures as Shear Buildings / 281
- 9.6 Summary / 283
Problems / 283

10 FREE VIBRATION OF A SHEAR BUILDING 287

- 10.1 Natural Frequencies and Normal Modes / 287
- 10.2 Orthogonality Property of the Normal Modes / 294
- 10.3 Rayleigh's Quotient / 298
- 10.4 Program 8—Natural Frequencies and Normal Modes / 300
- 10.5 Free Vibration of a Shear Building Using COSMOS / 301
- 10.6 Summary / 304
Problems / 305

11 FORCED MOTION OF SHEAR BUILDING 310

- 11.1 Modal Superposition Method / 310
- 11.2 Response of a Shear Building to Base Motion / 317
- 11.3 Program 9—Response by Modal Superposition / 324

11.4	Harmonic Forced Excitation /	326
11.5	Program 10—Harmonic Response /	331
11.6	Combining Maximum Values of Modal Response /	334
11.7	Forced Motion of a Shear Building Using COSMOS /	335
11.8	Summary /	346
	Problems /	348
12	DAMPED MOTION OF SHEAR BUILDINGS	352
12.1	Equations for Damped Shear Building /	353
12.2	Uncoupled Damped Equations /	354
12.3	Conditions for Damping Uncoupling /	355
12.4	Program 11—Absolute Damping From Damping Ratios /	362
12.5	Summary /	364
	Problems /	364
13	REDUCTION OF DYNAMIC MATRICES	366
13.1	Static Condensation /	367
13.2	Static Condensation Applied to Dynamic Problems /	370
13.3	Dynamic Condensation /	380
13.4	Modified Dynamic Condensation /	387
13.5	Program 12—Reduction of the Dynamic Problem /	391
13.6	Summary /	393
	Problems /	393
PART III STRUCTURES MODELED AS DISCRETE MULTIDEGREE-OF-FREEDOM SYSTEMS 397		
14	DYNAMIC ANALYSIS OF BEAMS	399
14.1	Static Properties for a Beam Segment /	400
14.2	System Stiffness Matrix /	405
14.3	Inertial Properties—Lumped Mass /	408
14.4	Inertial Properties—Consistent Mass /	410
14.5	Damping Properties /	414
14.6	External Loads /	414
14.7	Geometric Stiffness /	416
14.8	Equations of Motion /	420
14.9	Element Forces at Nodal Coordinates /	427
14.10	Program 13—Modeling Structures as Beams /	430
14.11	Dynamic Analysis of Beams Using COSMOS /	433

14.12	Summary / 437
	Problems / 438
15	DYNAMIC ANALYSIS OF PLANE FRAMES 442
15.1	Element Stiffness Matrix for Axial Effects / 443
15.2	Element Mass Matrix for Axial Effects / 444
15.3	Coordinate Transformation / 449
15.4	Program 14—Modeling Structures as Plane Frames / 458
15.5	Dynamic Analysis of Frames Using COSMOS / 460
15.6	Summary / 465
	Problems / 466
16	DYNAMIC ANALYSIS OF GRIDS 469
16.1	Local and Global Coordinate Systems / 470
16.2	Torsional Effects / 471
16.3	Stiffness Matrix for a Grid Element / 472
16.4	Consistent Mass Matrix for a Grid Element / 473
16.5	Lumped Mass Matrix for a Grid Element / 473
16.6	Transformation of Coordinates / 474
16.7	Program 15—Modeling Structures as Grid Frames / 480
16.8	Dynamic Analysis of Grids Using COSMOS / 483
16.9	Summary / 487
	Problems / 488
17	THREE-DIMENSIONAL FRAMES 491
17.1	Element Stiffness Matrix / 491
17.2	Element Mass Matrix / 493
17.3	Element Damping Matrix / 494
17.4	Transformation of Coordinates / 494
17.5	Differential Equation of Motion / 503
17.6	Dynamic Response / 504
17.7	Program 16—Modeling Structures as Space Frames / 504
17.8	Dynamic Response of Three-Dimensional Frames Using COSMOS / 507
17.9	Summary / 510
	Problems / 510
18	DYNAMIC ANALYSIS OF TRUSSES 511
18.1	Stiffness and Mass Matrices for the Plane Truss / 512
18.2	Transformation of Coordinates / 514

18.3	Program 17—Modeling Structures as Plane Trusses /	520
18.4	Stiffness and Mass Matrices for Space Trusses /	522
18.5	Equation of Motion for Space Trusses /	525
18.6	Program 18—Modeling Structures as Space Trusses /	526
18.7	Dynamic Analysis of Trusses Using COSMOS /	528
18.8	Summary /	536
	Problems /	536
19	DYNAMIC ANALYSIS OF STRUCTURES USING THE FINITE ELEMENT METHOD	538
19.1	Plane Elasticity Problems /	539
19.1.1	Triangular Plate Element for Plane Elasticity Problems /	540
19.1.2	Library of Plane Elasticity Elements (2D Elements) /	552
19.2	Plate Bending /	555
19.2.1	Rectangular Finite Element for Plate Bending /	556
19.2.2	COSMOS Library of Plate and Shell Elements /	565
19.3	Summary /	573
	Problems /	575
20	TIME HISTORY RESPONSE OF MULTIDEGREE-OF-FREEDOM SYSTEMS	577
20.1	Incremental Equations of Motion /	578
20.2	The Wilson- θ Method /	579
20.3	Algorithm for Step-by-Step Solution of a Linear System Using the Wilson- θ Method /	582
20.3.1	Initialization /	582
20.3.2	For Each Time Step /	582
20.4	Program 19—Response by Step Integration /	587
20.5	Newmark Beta Method /	588
20.6	Elastoplastic Behavior of Framed Structures /	589
20.7	Member Stiffness Matrix /	590
20.8	Member Mass Matrix /	593
20.9	Rotation of Plastic Hinges /	595
20.10	Calculation of Member Ductility Ratio /	596
20.11	Time-History Response of Multidegree-of-Freedom Systems Using COSMOS /	597
20.12	Summary /	602
	Problems /	604

PART IV STRUCTURES MODELED WITH DISTRIBUTED PROPERTIES 607

21 DYNAMIC ANALYSIS OF SYSTEMS WITH DISTRIBUTED PROPERTIES 609

- 21.1 Flexural Vibration of Uniform Beams / 610
- 21.2 Solution of the Equation of Motion in Free Vibration / 611
- 21.3 Natural Frequencies and Mode Shapes for Uniform Beams / 613
 - 21.3.1 Both Ends Simply Supported / 613
 - 21.3.2 Both Ends Free (Free Beam) / 617
 - 21.3.3 Both Ends Fixed / 618
 - 21.3.4 One End Fixed and the other End Free (Cantilever Beam) / 620
 - 21.3.5 One End Fixed and the other End Simply Supported / 622
- 21.4 Orthogonality Condition Between Normal Modes / 622
- 21.5 Forced Vibration of Beams / 624
- 21.6 Dynamic Stresses in Beams / 630
- 21.7 Summary / 632
Problems / 633

22 DISCRETIZATION OF CONTINUOUS SYSTEMS 635

- 22.1 Dynamic Matrix for Flexural Effects / 636
- 22.2 Dynamic Matrix for Axial Effects / 638
- 22.3 Dynamic Matrix for Torsional Effects / 641
- 22.4 Beam Flexure Including Axial-Force Effect / 642
- 22.5 Power Series Expansion of the Dynamic Matrix for Flexural Effects / 646
- 22.6 Power Series Expansion of the Dynamic Matrix for Axial and for Torsional Effects / 648
- 22.7 Power Series Expansion of the Dynamic Matrix Including the Effect of Axial Forces / 649
- 22.8 Summary / 650

PART V RANDOM VIBRATION 651

23 RANDOM VIBRATION 653

- 23.1 Statistical Description of Random Functions / 654
- 23.2 Probability Density Function / 657
- 23.3 The Normal Distribution / 659
- 23.4 The Rayleigh Distribution / 660

- 23.5 Correlation / 662
- 23.6 The Fourier Transform / 666
- 23.7 Spectral Analysis / 668
- 23.8 Spectral Density Function / 672
- 23.9 Narrow-Band and Wide-Band Random Processes / 675
- 23.10 Response to Random Excitation: Single-Degree-of-Freedom System / 679
- 23.11 Response to Random Excitation: Multiple-Degree-of-Freedom System / 685
- 23.12 Random Vibration Using COSMOS / 696
- 23.13 Summary / 700

PART VI EARTHQUAKE ENGINEERING 705

- 24 UNIFORM BUILDING CODE 1994: EQUIVALENT STATIC LATERAL FORCE METHOD 707
 - 24.1 Earthquake Ground Motion / 708
 - 24.2 Equivalent Seismic Lateral Force / 712
 - 24.3 Earthquake-Resistant Design Methods / 712
 - 24.4 Static Lateral Force Method / 713
 - 24.5 Distribution of Lateral Forces / 718
 - 24.6 Story Shear Force / 718
 - 24.7 Horizontal Torsional Moment / 719
 - 24.8 Overturning Moment / 720
 - 24.9 Story Drift Limitation / 720
 - 24.10 P-Delta Effect ($P-\Delta$) / 721
 - 24.11 Diaphragm Design Force / 723
 - 24.12 Program 23 UBC-94 Equivalent Static Lateral Force Method / 732
 - 24.13 Simplified Three Dimensional Earthquake Resistant Design of Buildings / 739
 - 24.13.1 Modeling the Building / 739
 - 24.13.2 Transformation of Stiffness Coefficients / 740
 - 24.13.3 Center of Rigidity / 742
 - 24.13.4 Story Eccentricity / 743
 - 24.13.5 Rotational Stiffness / 744
 - 24.13.6 Fundamental Period / 745
 - 24.13.7 Seismic Factors / 745
 - 24.13.8 Base Shear Force / 746
 - 24.13.9 Equivalent Lateral Seismic Forces / 746
 - 24.13.10 Overturning Moments / 747

24.13.10	Story Shear Force /	747
24.13.12	Torsional Moments /	747
24.13.13	Story Drift and Lateral Displacements /	748
24.13.14	Forces and Moments on Structural Elements /	749
24.13.15	Computer Program /	750
24.14	Equivalent Static Lateral Force Method Using COSMOS /	756
24.15	Summary /	761
25	UNIFORM BUILDING CODE 1994: DYNAMIC METHOD	766
25.1	Modal Seismic Response of Buildings /	766
25.1.1	Modal Equation and Participation Factor /	767
25.1.2	Modal Shear Force /	768
25.1.3	Effective Modal Weight /	770
25.1.4	Modal Lateral Forces /	771
25.1.5	Modal Displacements /	771
25.1.6	Modal Drift /	772
25.1.7	Modal Overturning Moment /	772
25.1.8	Modal Torsional Moment /	772
25.2	Total Design Values /	773
25.3	Provisions of UBC-94: Dynamic Method /	774
25.4	Scaling of Results /	776
25.5	Program 24-UBC 1994 Dynamic Lateral Force Method /	783
25.6	Summary /	787
	Problems /	788
APPENDICES / 789		
Appendix I: Answers to Problems in Part I / 791		
Appendix II: Computer Programs / 801		
Appendix III: Organization and their Acronyms / 804		
Glossary / 807		
Selected Bibliography / 815		
Index / 819		
Diskette Order Form / 825
