SECTION I Fundamentals and Analysis

1	Time-Domain Analysis	Clarence W. de Silva	1-1
1.1	Introduction		1-1
1.2	Undamped Oscillator		1-2
1.3	Heavy Springs		1-12
1.4	Oscillations in Fluid Systems		1-14
1.5	Damped Simple Oscillator		1-16
1.6	Forced Response		1-27
2	Frequency-Domain Analysis	Clarence W. de Silva	2-1
2.1	Introduction		2-1
2.2	Response to Harmonic Excitations		2-2
2.3	Transform Techniques		2-14
2.4	Mechanical Impedance Approach		2-25
2.5	Transmissibility Functions		2-31
2.6	Receptance Method		2-37
	Appendix 2A Transform Techniques		2-40
3	Modal Analysis	Clarence W. de Silva	3-1
3.1	Introduction		3-1
3.2	Degrees of Freedom and Independent Coordinates		3-2
3.3	System Representation		3-4
3.4	Modal Vibrations		3-10
3.5	Orthogonality of Natural Modes		3-14
3.6	Static Modes and Rigid-Body Modes		3-15
3.7	Other Modal Formulations		3-22
3.8	Forced Vibration		3-28
3.9	Damped Systems		3-32
3.10	State-Space Approach		3-36
	Appendix 3A Linear Algebra		3-41
4	Distributed-Parameter Systems	Clarence W. de Silva	4-1
4.1	Introduction		4-1
4.2	Transverse Vibration of Cables		4-2

4.3	Longitudinal Vibrations of Rods	4-13
4.4	Torsional Vibration of Shafts	4-19
4.5	Flexural Vibration of Beams	4-26
4.6	Damped Continuous Systems	4-50
4.7	Vibration of Membranes and Plates	4-52
5	Random Vibration <i>Haym Benaroya</i>	5-1
5.1	Random Vibration	5-1
5.2	Single Degree of Freedom: The Response to Random Loads	5-2
5.3	Response to Two Random Loads	5-7
5.4	Multi-Degree-of-Freedom Vibration	5-12
5.5	Multi-Degree-of-Freedom: The Response to Random Loads	5-17
5.6	Continuous System Random Vibration	5-29

SECTION II Computer Techniques

6	Numerical Techniques <i>Marie D. Dahleh</i>	6-1
6.1	Introduction	6-1
6.2	Single-Degree-of-Freedom System	6-2
6.3	Systems with Two or More Degrees of Freedom	6-8
6.4	Finite Difference Method for a Continuous System	6-11
6.5	Matrix Methods	6-14
6.6	Approximation Methods for the Fundamental Frequency	6-18
6.7	Finite Element Method	6-20
	Appendix 6A Introduction to MATLAB®	6-24
7	Vibration Modeling and Software Tools <i>Datong Song, Cheng Huang, and Zhong-Sheng Liu</i>	7-1
7.1	Introduction	7-1
7.2	Formulation	7-2
7.3	Vibration Analysis	7-9
7.4	Commercial Software Packages	7-13
7.5	The Basic Procedure of Vibration Analysis	7-16
7.6	An Engineering Case Study	7-19
7.7	Comments	7-21
8	Computer Analysis of Flexibly Supported Multibody Systems <i>Ibrahim Esat and M. Dabestani</i>	8-1
8.1	Introduction	8-1
8.2	Theory	8-2
8.3	A Numerical Example	8-7
8.4	An Industrial Vibration Design Problem	8-11
8.5	Programming Considerations	8-16
8.6	VIBRATIO	8-17
8.7	Analysis	8-24
8.8	Comments	8-31
	Appendix 8A VIBRATIO Output for Numerical Example in Section 8.3	8-32

9	Finite Element Applications in Dynamics	Mohamed S. Gadala	9-1
9.1	Problem and Element Classification		9-2
9.2	Types of Analysis		9-20
9.3	Modeling Aspects for Dynamic Analysis		9-23
9.4	Equations of Motion and Solution Methods		9-27
9.5	Various Dynamic Analyses		9-33
9.6	Checklist for Dynamic FE Analysis		9-41
10	Vibration Signal Analysis	Clarence W. de Silva	10-1
10.1	Introduction		10-1
10.2	Frequency Spectrum		10-2
10.3	Signal Types		10-7
10.4	Fourier Analysis		10-7
10.5	Analysis of Random Signals		10-18
10.6	Other Topics of Signal Analysis		10-26
10.7	Overlapped Processing		10-28
11	Wavelets — Concepts and Applications	Pol D. Spanos, Giuseppe Failla, and Nikolaos P. Politis	11-1
11.1	Introduction		11-1
11.2	Time–Frequency Analysis		11-2
11.3	Time-Dependent Spectra Estimation of Stochastic Processes		11-11
11.4	Random Field Simulation		11-14
11.5	System Identification		11-15
11.6	Damage Detection		11-17
11.7	Material Characterization		11-18
11.8	Concluding Remarks		11-19

SECTION III Shock and Vibration

12	Mechanical Shock	Christian Lalanne	12-1
12.1	Definitions		12-2
12.2	Description in the Time Domain		12-3
12.3	Shock Response Spectrum		12-4
12.4	Pyroshocks		12-17
12.5	Use of Shock Response Spectra		12-18
12.6	Standards		12-24
12.7	Damage Boundary Curve		12-26
12.8	Shock Machines		12-28
12.9	Generation of Shock Using Shakers		12-44
12.10	Control by a Shock Response Spectrum		12-52
12.11	Pyrotechnic Shock Simulation		12-58
13	Vibration and Shock Problems of Civil Engineering Structures	Priyan Mendis and Tuan Ngo	13-1
13.1	Introduction		13-2
13.2	Earthquake-Induced Vibration of Structures		13-3

13.3	Dynamic Effects of Wind Loading on Structures	13-22
13.4	Vibrations Due to Fluid–Structure Interaction	13-33
13.5	Blast Loading and Blast Effects on Structures	13-34
13.6	Impact Loading	13-47
13.7	Floor Vibration	13-51
14	Reinforced Concrete Structures <i>Y.L. Mo</i>	14-1
14.1	Introduction	14-1
14.2	Analytical Models	14-6
14.3	Beams under Harmonic Excitations	14-18
14.4	Design for Explosions/Shocks	14-21

SECTION IV Instrumentation and Testing

15	Vibration Instrumentation <i>Clarence W. de Silva</i>	15-1
15.1	Introduction	15-1
15.2	Vibration Exciters	15-3
15.3	Control System	15-15
15.4	Performance Specification	15-21
15.5	Motion Sensors and Transducers	15-27
15.6	Torque, Force, and Other Sensors	15-50
	Appendix 15A Virtual Instrumentation for Data Acquisition, Analysis, and Presentation	15-73
16	Signal Conditioning and Modification <i>Clarence W. de Silva</i>	16-1
16.1	Introduction	16-2
16.2	Amplifiers	16-2
16.3	Analog Filters	16-15
16.4	Modulators and Demodulators	16-29
16.5	Analog–Digital Conversion	16-37
16.6	Bridge Circuits	16-43
16.7	Linearizing Devices	16-49
16.8	Miscellaneous Signal Modification Circuitry	16-56
16.9	Signal Analyzers and Display Devices	16-62
17	Vibration Testing <i>Clarence W. de Silva</i>	17-1
17.1	Introduction	17-1
17.2	Representation of a Vibration Environment	17-3
17.3	Pretest Procedures	17-24
17.4	Testing Procedures	17-37
17.5	Some Practical Information	17-52
18	Experimental Model Analysis <i>Clarence W. de Silva</i>	18-1
18.1	Introduction	18-1
18.2	Frequency-Domain Formulation	18-2
18.3	Experimental Model Development	18-8
18.4	Curve Fitting of Transfer Functions	18-10

18.5	Laboratory Experiments	18-18
18.6	Commercial EMA Systems	18-24

SECTION V **Vibration Suppression and Control**

19	Vibration Damping <i>Clarence W. de Silva</i>	19-1
19.1	Introduction	19-1
19.2	Types of Damping	19-2
19.3	Representation of Damping in Vibration Analysis	19-9
19.4	Measurement of Damping	19-16
19.5	Interface Damping	19-26
20	Damping Theory <i>Randall D. Peters</i>	20-1
20.1	Preface	20-2
20.2	Introduction	20-4
20.3	Background	20-12
20.4	Hysteresis — More Details	20-19
20.5	Damping Models	20-20
20.6	Measurements of Damping	20-23
20.7	Hysteretic Damping	20-27
20.8	Failure of the Common Theory	20-29
20.9	Air Influence	20-30
20.10	Noise and Damping	20-31
20.11	Transform Methods	20-34
20.12	Hysteretic Damping	20-36
20.13	Internal Friction	20-41
20.14	Mathematical Tricks — Linear Damping Approximations	20-43
20.15	Internal Friction Physics	20-44
20.16	Zener Model	20-45
20.17	Toward a Universal Model of Damping	20-48
20.18	Nonlinearity	20-58
20.19	Concluding Remark	20-65
21	Experimental Techniques in Damping <i>Randall D. Peters</i>	21-1
21.1	Electronic Considerations	21-2
21.2	Data Processing	21-3
21.3	Sensor Choices	21-7
21.4	Damping Examples	21-8
21.5	Driven Oscillators with Damping	21-19
21.6	Oscillator with Multiple Nonlinearities	21-21
21.7	Multiple Modes of Vibration	21-24
21.8	Internal Friction as Source of Mechanical Noise	21-28
21.9	Viscous Damping — Need for Caution	21-29
21.10	Air Influence	21-31
22	Structure and Equipment Isolation <i>Y.B. Yang, L.Y. Lu, and J.D. Yau</i>	22-1
22.1	Introduction	22-2
22.2	Mechanisms of Base-Isolated Systems	22-4

22.3	Structure–Equipment Systems with Elastomeric Bearings	22-9
22.4	Sliding Isolation Systems	22-17
22.5	Sliding Isolation Systems with Resilient Mechanism	22-36
22.6	Issues Related to Seismic Isolation Design	22-50
23	Vibration Control <i>Nader Jalili and Ebrahim Esmailzadeh</i>	23-1
23.1	Introduction	23-1
23.2	Vibration-Control Systems Concept	23-4
23.3	Vibration-Control Systems Design and Implementation	23-12
23.4	Practical Considerations and Related Topics	23-38
24	Helicopter Rotor Tuning <i>Kourosh Danai</i>	24-1
24.1	Introduction	24-1
24.2	Neural Network-Based Tuning	24-4
24.3	Probability-Based Tuning	24-5
24.4	Adaptive Tuning	24-8
24.5	Case Study	24-12
24.6	Conclusion	24-17

SECTION VI Monitoring and Diagnosis

25	Machine Condition Monitoring and Fault Diagnostics <i>Chris K. Mechefske</i>	25-1
25.1	Introduction	25-2
25.2	Machinery Failure	25-2
25.3	Basic Maintenance Strategies	25-4
25.4	Factors which Influence Maintenance Strategy	25-7
25.5	Machine Condition Monitoring	25-8
25.6	Transducer Selection	25-10
25.7	Transducer Location	25-14
25.8	Recording and Analysis Instrumentation	25-14
25.9	Display Formats and Analysis Tools	25-16
25.10	Fault Detection	25-21
25.11	Fault Diagnostics	25-25
26	Vibration-Based Tool Condition Monitoring Systems <i>C. Scheffer and P.S. Heyns</i>	26-1
26.1	Introduction	26-1
26.2	Mechanics of Turning	26-2
26.3	Vibration Signal Recording	26-7
26.4	Signal Processing for Sensor-Based Tool Condition Monitoring	26-11
26.5	Wear Model/Decision-Making for Sensor-Based Tool Condition Monitoring	26-15
26.6	Conclusion	26-20
27	Fault Diagnosis of Helicopter Gearboxes <i>Kourosh Danai</i>	27-1
27.1	Introduction	27-1
27.2	Abnormality Scaling	27-5
27.3	The Structure-Based Connectionist Network	27-8
27.4	Sensor Location Selection	27-11

27.5	A Case Study	27-14
27.6	Conclusion	27-23
28	Vibration Suppression and Monitoring in Precision Motion Systems <i>K.K. Tan, T.H. Lee, K.Z. Tang, S. Huang, S.Y. Lim, W. Lin, and Y.P. Leow</i>	28-1
28.1	Introduction	28-1
28.2	Mechanical Design to Minimize Vibration	28-2
28.3	Adaptive Notch Filter	28-10
28.4	Real-Time Vibration Analyzer	28-17
28.5	Practical Insights and Case Study	28-29
28.6	Conclusions	28-35

SECTION VII Seismic Vibration

29	Seismic Base Isolation and Vibration Control <i>Hirokazu Iemura, Sarvesh Kumar Jain, and Mulyo Harris Pradono</i>	29-1
29.1	Introduction	29-1
29.2	Seismic Base Isolation	29-4
29.3	Seismic Vibration Control	29-33
30	Seismic Random Vibration of Long-Span Structures <i>Jiahao Lin and Yahui Zhang</i>	30-1
30.1	Introduction	30-2
30.2	Seismic Random Excitation Fields	30-11
30.3	Pseudoexcitation Method for Structural Random Vibration Analysis	30-16
30.4	Long-Span Structures Subjected to Stationary Random Ground Excitations	30-27
30.5	Long-Span Structures Subjected to Nonstationary Random Ground Excitations	30-34
30.6	Conclusions	30-39
31	Seismic Qualification of Equipment <i>Clarence W. de Silva</i>	31-1
31.1	Introduction	31-1
31.2	Distribution Qualification	31-1
31.3	Seismic Qualification	31-6

SECTION VIII Design and Applications

32	Vibration Design and Control <i>Clarence W. de Silva</i>	32-1
32.1	Introduction	32-2
32.2	Specification of Vibration Limits	32-3
32.3	Vibration Isolation	32-5
32.4	Balancing of Rotating Machinery	32-15
32.5	Balancing of Reciprocating Machines	32-26
32.6	Whirling of Shafts	32-33
32.7	Design through Modal Testing	32-39
32.8	Passive Control of Vibration	32-45

32.9	Active Control of Vibration	32-61
32.10	Control of Beam Vibrations	32-67
	Appendix 32A MATLAB Control Systems Toolbox	32-73
33	Structural Dynamic Modification and Sensitivity Analysis <i>Su Huan Chen</i>	33-1
33.1	Introduction	33-2
33.2	Structural Dynamic Modification of Finite Element Model	33-2
33.3	Perturbation Method of Vibration Modes	33-4
33.4	Design Sensitivity Analysis of Structural Vibration Modes	33-8
33.5	High-Accuracy Modal Superposition for Sensitivity Analysis of Modes	33-11
33.6	Sensitivity of Eigenvectors for Free-Free Structures	33-13
33.7	Matrix Perturbation Theory for Repeated Modes	33-14
33.8	Matrix Perturbation Method for Closely Spaced Eigenvalues	33-16
33.9	Matrix Perturbation Theory for Complex Modes	33-22
34	Vibration in Rotating Machinery <i>H. Sam Samarasekera</i>	34-1
34.1	Introduction	34-1
34.2	Vibration Basics	34-6
34.3	Rotordynamic Analysis	34-18
34.4	Vibration Measurement and Techniques	34-39
34.5	Vibration Control and Diagnostics	34-39
35	Regenerative Chatter in Machine Tools <i>Robert G. Landers</i>	35-1
35.1	Introduction	35-1
35.2	Chatter in Turning Operations	35-3
35.3	Chatter in Face-Milling Operations	35-9
35.4	Time-Domain Simulation	35-14
35.5	Chatter Detection	35-18
35.6	Chatter Suppression	35-20
35.7	Case Study	35-24
36	Fluid-Induced Vibration <i>Seon M. Han</i>	36-1
36.1	Description of the Ocean Environment	36-1
36.2	Fluid Forces	36-16
36.3	Examples	36-23

SECTION IX **Acoustics**

37	Sound Levels and Decibels <i>S. Akishita</i>	37-1
37.1	Introduction	37-1
37.2	Sound Wave Characteristics	37-1
37.3	Levels and Decibels	37-3
38	Hearing and Psychological Effects <i>S. Akishita</i>	38-1
38.1	Introduction	38-1
38.2	Structure and Function of the Ear	38-1
38.3	Frequency and Loudness Response	38-2

38.4	Hearing Loss	38-4
38.5	Psychological Effects of Noise	38-4
39	Noise Control Criteria and Regulations <i>S. Akishita</i>	39-1
39.1	Introduction	39-1
39.2	Basic Ideas behind Noise Policy	39-1
39.3	Legislation	39-2
39.4	Regulation	39-4
39.5	Measures of Noise Evaluation	39-5
40	Instrumentation <i>Kiyoshi Nagakura</i>	40-1
40.1	Sound Intensity Measurement	40-1
40.2	Mirror-Microphone System	40-4
40.3	Microphone Array	40-6
41	Source of Noise <i>S. Akishita</i>	41-1
41.1	Introduction	41-1
41.2	Radiation of Sound	41-1
42	Design of Absorption <i>Teruo Obata</i>	42-1
42.1	Introduction	42-1
42.2	Fundamentals of Sound Absorption	42-2
42.3	Sound-Absorbing Materials	42-3
42.4	Acoustic Characteristic Computation of Compound Wall	42-6
42.5	Attenuation of Lined Ducts	42-10
42.6	Attenuation of Dissipative Mufflers	42-12
42.7	General Considerations	42-15
42.8	Practical Example of Dissipative Muffler	42-17
43	Design of Reactive Mufflers <i>Teruo Obata</i>	43-1
43.1	Introduction	43-1
43.2	Fundamental Equations	43-2
43.3	Effects of Reactive Mufflers	43-3
43.4	Calculation Procedure	43-5
43.5	Application Range of Model	43-6
43.6	Practical Example	43-13
44	Design of Sound Insulation <i>Kiyoshi Okura</i>	44-1
44.1	Theory of Sound Insulation	44-1
44.2	Application of Sound Insulation	44-13
45	Statistical Energy Analysis <i>Takayuki Koizumi</i>	45-1
45.1	Introduction	45-1
45.2	Power Flow Equations	45-2
45.3	Estimation of Sea Parameters	45-4
45.4	Application in Structures	45-7
	Glossary	G-1
	Index	I-1
