Preface	xiii
Introduction	xvi
<b>Part I Six Sigma Implementation and Management</b>	<b>1</b>
<b>Chapter 1 Building the Six Sigma Infrastructure</b>	<b>3</b>
What is Six Sigma?	3
Why Six Sigma?	4
The Six Sigma philosophy	6
The change imperative	11
Change agents and their effects on organizations	13
Implementing Six Sigma	20
Timetable	22
Infrastructure	25
Six Sigma deployment and management	31
Six Sigma communication plan	31
Six Sigma organizational roles and responsibilities	35
Selecting the “Belts”	38
Integrating Six Sigma and related initiatives	49
Deployment to the supply chain	51
Change agent compensation and retention	54
<b>Chapter 2 Six Sigma Goals and Metrics</b>	<b>56</b>
Attributes of good metrics	56
Six Sigma versus traditional three sigma performance	58
The balanced scorecard	61
Measuring causes and effects	62
Information systems	64

Customer perspective	65
Internal process perspective	67
Innovation and learning perspective	69
Financial perspective	70
Strategy deployment plan	71
Information systems requirements	74
Integrating Six Sigma with other information systems technologies	74
OLAP, data mining, and Six Sigma	79
Dashboard design	79
Dashboards for scale data	81
Dashboards for ordinal data	84
Dashboards for nominal data	87
Setting organizational key requirements	89
Benchmarking	91
<b>Chapter 3 Creating Customer-Driven Organizations</b>	<b>97</b>
Elements of customer-driven organizations	97
Becoming a customer- and market-driven enterprise	98
Elements of the transformed organization	98
Surveys and focus groups	102
Strategies for communicating with customers and employees	102
Surveys	103
Focus groups	113
Other customer information systems	114
Calculating the value of retention of customers	116
Complaint handling	118
Kano model of customer expectations	119
Customer expectations, priorities, needs, and “voice”	119
Garden variety Six Sigma only addresses half of the Kano customer satisfaction model	120
Quality function deployment (QFD)	121
Data collection and review of customer expectations, needs, requirements, and specifications	123
The Six Sigma process enterprise	125
Examples of processes	126
The source of conflict	128
A resolution to the conflict	129
Process excellence	130
Using QFD to link Six Sigma projects to strategies	132
The strategy deployment matrix	133
Deploying differentiators to operations	136

---

Deploying operations plans to projects	138
Linking customer demands to budgets	140
Structured decision-making	140
Category importance weights	145
Subcategory importance weights	146
Global importance weights	147
<b>Chapter 4 Training for Six Sigma</b>	<b>150</b>
Training needs analysis	150
The strategic training plan	152
Training needs of various groups	153
Post-training evaluation and reinforcement	162
<b>Chapter 5 Six Sigma Teams</b>	<b>167</b>
Six Sigma teams	167
Process improvement teams	168
Work groups	169
Quality circles	169
Other self-managed teams	170
Team dynamics management, including conflict resolution	171
Stages in group development	172
Common problems	173
Member roles and responsibilities	173
Facilitation techniques	178
When to use an outside facilitator	178
Selecting a facilitator	178
Principles of team leadership and facilitation	179
Facilitating the group task process	181
Facilitating the group maintenance process	182
Team performance evaluation	182
Team recognition and reward	184
<b>Chapter 6 Selecting and Tracking Six Sigma Projects</b>	<b>187</b>
Choosing the right projects	188
Customer value projects	188
Shareholder value projects	189
Other Six Sigma projects	189
Analyzing project candidates	189
Benefit-cost analysis	189
A system for assessing Six Sigma projects	190
Other methods of identifying promising projects	198
Throughput-based project selection	201
Multi-tasking and project scheduling	205
Summary and preliminary project selection	208

Tracking Six Sigma project results	208
Financial results validation	211
Financial analysis	212
Lessons learned capture and replication	233
<b>Part II Six Sigma Tools and Techniques</b>	<b>235</b>
<b>Chapter 7 Introduction to DMAIC and Other Improvement Models</b>	<b>237</b>
DMAIC, DMADV and learning models	237
Design for Six Sigma project framework	239
Learning models	241
PDCA	243
Dynamic models of learning and adaptation	245
<b>The Define Phase</b>	
<b>Chapter 8 Problem Solving Tools</b>	<b>252</b>
Process mapping	252
Cycle time reduction through cross-functional process mapping	253
Flow charts	254
Check sheets	255
Process check sheets	256
Defect check sheets	257
Stratified defect check sheets	257
Defect location check sheets	258
Cause and effect diagram check sheets	259
Pareto analysis	259
How to perform a Pareto analysis	259
Example of Pareto analysis	260
Cause and effect diagrams	261
7M tools	264
Affinity diagrams	264
Tree diagrams	265
Process decision program charts	265
Matrix diagrams	268
Interrelationship digraphs	268
Prioritization matrices	269
Activity network diagram	273
Other continuous improvement tools	273

## The Measure Phase

<b>Chapter 9 Basic Principles of Measurement</b>	<b>277</b>
Scales of measurement	277
Reliability and validity of data	280
Definitions	280
Overview of statistical methods	283
Enumerative versus analytic statistical methods	283
Enumerative statistical methods	287
Assumptions and robustness of tests	290
Distributions	291
Probability distributions for Six Sigma	293
Statistical inference	310
Hypothesis testing/Type I and Type II errors	315
Principles of statistical process control	318
Terms and concepts	318
Objectives and benefits	319
Common and special causes of variation	321
<b>Chapter 10 Measurement Systems Analysis</b>	<b>325</b>
R&R studies for continuous data	325
Discrimination, stability, bias, repeatability, reproducibility, and linearity	325
Gage R&R analysis using Minitab	337
Output	338
Linearity	341
Attribute measurement error analysis	346
Operational definitions	348
Example of attribute inspection error analysis	350
Repeatability and pairwise reproducibility	352
Minitab attribute gage R&R example	356

## The Analyze Phase

<b>Chapter 11 Knowledge Discovery</b>	<b>361</b>
Knowledge discovery tools	361
Run charts	361
Descriptive statistics	368
Histograms	371
Exploratory data analysis	381
Establishing the process baseline	385
Describing the process baseline	387

SIPOC	383
Process for creating a SIPOC diagram	389
SIPOC example	390
<b>Chapter 12 Statistical Process Control Techniques</b>	<b>393</b>
Statistical process control (SPC)	393
Types of control charts	393
average and range, average and sigma, control charts for individual measurements, control charts for proportion defective, control chart for count of defectives, control charts for average occurrences-per-unit, control charts for counts of occurrences-per unit	
Short-run SPC	430
control chart selection, rational subgroup sampling, control charts interpretation	
EWMA	453
EWMA charts	453
SPC and automatic process control	465
Minitab example of EWMA	
<b>Chapter 13 Process Capability Analysis</b>	<b>467</b>
Process capability analysis (PCA)	467
How to perform a process capability study	467
Statistical analysis of process capability data	471
Process capability indexes	472
Interpreting capability indexes	473
Example of capability analysis using normally distributed variables data	475
Estimating process yield	484
Rolled throughput yield and sigma level	484
Normalized yield and sigma level	487
<b>Chapter 14 Statistical Analysis of Cause and Effect</b>	<b>490</b>
Testing common assumptions	490
Continuous versus discrete data	490
Independence assumption	492
Normality assumption	493
Equal variance assumption	496
Regression and correlation analysis	496
Scatter plots	496
Correlation and regression	502
Analysis of categorical data	514
Chi-square, tables	514

---

Logistic regression	516
binary logistic regression, ordinal logistic regression, and nominal logistic regression	
Non-parametric methods	528
Guidelines on when to use non-parametric tests	533
Minitab's nonparametric tests	

## The Improve Phase

<b>Chapter 15 Managing Six Sigma Projects</b>	534
Useful project management tools and techniques	535
Project planning	536
Project charter	538
Work breakdown structures	541
Feedback loops	543
Performance measures	544
Gantt charts	544
Typical DMAIC project tasks and responsibilities	545
PERT-CPM-type project management systems	545
Resources	552
Resource conflicts	552
Cost considerations in project scheduling	552
Relevant stakeholders	556
Budgeting	558
Project management implementation	560
Management support and organizational roadblocks	560
Short-term (tactical) plans	565
Cross-functional collaboration	566
Continuous review and enhancement of quality process	567
Documentation and procedures	568
<b>Chapter 16 Risk Assessment</b>	571
Reliability and safety analysis	571
Reliability analysis	571
Risk assessment tools	590
Fault free analysis	591
Safety analysis	591
Failure mode and effect analysis (FMEA)	596
FMEA process	597
Statistical tolerancing	600
Assumptions of formula	605
Tolerance intervals	606

<b>Chapter 17 Design of Experiments (DOE)</b>	<b>607</b>
Terminology	608
Definitions	608
Power and sample size	610
Example	610
Design characteristics	610
Types of design	611
One-factor	614
Examples of applying common DOE methods using software	616
Two-way ANOVA with no replicates	617
Two-way ANOVA with replicates	618
Full and fractional factorial	621
Empirical model building and sequential learning	624
Phase 0: Getting your bearings	626
Phase I: The screening experiment	627
Phase II: Steepest ascent (descent)	631
Phase III: The factorial experiment	633
Phase IV: The composite design	636
Phase V: Robust product and process design	640
Data mining, artificial neural networks and virtual process mapping	644
Example	646

## The Control Phase

<b>Chapter 18 Maintaining Control After the Project</b>	<b>649</b>
Business process control planning	649
How will we maintain the gains made?	649
Tools and techniques useful for control planning	651
Using SPC for ongoing control	652
Process control planning for short and small runs	655
Strategies for short and small runs	655
Preparing the short run process control plain (PCP)	656
Process audit	658
Selecting process control elements	658
The single part process	660
Other elements of the process control plan	661
PRE-Control	661
Setting up PRE-Control	662
Using PRE-Control	663

## Beyond DMAIC

<b>Chapter 19 Design for Six Sigma (DFSS)</b>	<b>665</b>
Preliminary steps	665
Define	667
Identify CTQs	667
Beyond customer requirements—identifying “delighters”	667
Using AHP to determine the relative importance of the CTQs	668
Measure	670
Measurement plan	671
Analyze	671
Using customer demands to make design decisions	674
Using weighted CTQs in decision-making	678
Pugh concept selection method	681
Design	682
Predicting CTQ performance	682
Process simulation	685
Virtual DOE using simulation software	699
Design phase cross-references	703
Verify	703
Pilot run	704
Transition to full-scale operations	704
Verify phase cross-references	704
<b>Chapter 20 Lean Manufacturing and Six Sigma</b>	<b>705</b>
Introduction to Lean and <i>muda</i>	705
What is value to the customer?	706
Example: Weld dents	706
The value definition	707
Kinds of waste	708
What is the value stream?	708
Value stream mapping	710
How do we make value flow?	711
Example of Takt time calculation	712
Spaghetti charts	712
How do we make value flow at the pull of the customer?	713
Tools to help improve flow	714
5S; constraint management; level loading; pull systems; flexible process; lot size reduction	
How can we continue towards perfection?	716
KAIZEN	717
Becoming Lean: A tactical perspective	720
Six Sigma and Lean	721

<b>Appendix</b>	724
Table 1—Glossary of basic statistical terms	724
Table 2—Area under the standard normal curve	730
Table 3—Critical values of the <i>t</i> -distribution	733
Table 4—Chi-square distribution	735
Table 5— <i>F</i> distribution ( $\alpha = 1\%$ )	738
Table 6— <i>F</i> distribution ( $\alpha = 5\%$ )	740
Table 7—Poisson probability sums	742
Table 8—Tolerance interval factors	746
Table 9—Durbin-Watson test bounds	750
Table 10— <i>y</i> factors for computing AOQL	754
Table 11—Control chart constants	755
Table 12—Control chart equations	757
Table 13—Table of $d_2^*$ values	759
Table 14—Power functions for ANOVA	761
Table 15—Factors for short run control charts for individuals, X-bar, and R charts	770
Table 16—Significant number of consecutive highest or lowest values from one stream of a multiple-stream process	772
Table 17—Sample customer survey	773
Table 18—Process $\sigma$ levels and equivalent PPM quality levels	777
Table 19—Black Belt effectiveness certification	778
Table 20—Green Belt effectiveness certification	791
Table 21—AHP using Microsoft Excel <sup>TM</sup>	804
<b>References</b>	806
<b>Index</b>	814
