

TABLE OF CONTENTS

Chapter 1: General concepts	1
1. Dual hypergraphs	1
2. Degrees	3
3. Intersecting families	10
4. The coloured edge property and Chvátal's conjecture	15
5. The Helly property	21
6. Section of a hypergraph and the Kruskal-Katona Theorem	26
7. Conformal hypergraphs	30
8. Representative graphs	31
Exercises	39
Chapter 2: Transversal sets and matchings	43
1. Transversal hypergraphs	43
2. The coefficients τ and τ'	53
3. τ -critical hypergraphs	59
4. The König property	64
Exercises	72
Chapter 3: Fractional transversals	74
1. Fractional transversal number	74
2. Fractional matching of a graph	83
3. Fractional transversal number of a regularisable hypergraph	93
4. Greedy transversal number	99
5. Ryser's conjecture	103
6. Transversal number of product hypergraphs	105
Exercises	113
Chapter 4: Colourings	115
1. Chromatic number	115
2. Particular kinds of colourings	120
3. Uniform colourings	122
4. Extremal problems related to the chromatic number	130
5. Good edge-colourings of a complete hypergraph	137
6. An application to an extremal problem	146
7. Kneser's problem	148
Exercises	150

Chapter 5: Hypergraphs generalising bipartite graphs	155
1. Hypergraphs without odd cycles	155
2. Unimodular hypergraphs	162
3. Balanced hypergraphs	171
4. Arboreal hypergraphs	186
5. Normal hypergraphs	193
6. Mengerian hypergraphs	198
7. Paranormal hypergraphs	208
Exercises	213
Appendix: Matchings and colourings in matroids	217
References	237
