

Table of Contents

<i>Preface</i>	<i>xiii</i>
<i>Acknowledgments</i>	<i>xix</i>
Chapter 1 Graphical Presentation of Data	1
1.1 Introduction	1
1.2 Types of Data	1
1.3 Bar Charts	2
1.4 Histograms	3
1.5 Dotplots	4
1.6 Stem-and-Leaf Plots	4
1.7 Box-and-Whisker Plots	5
1.8 Scatter Plots	6
1.9 Multi-Vari Charts	7
1.10 An Introduction to MINITAB	9
1.10.1 Starting MINITAB	9
1.10.2 MINITAB Windows	9
1.10.3 Using the Command Prompt	11
1.10.4 Customizing MINITAB	11
1.10.5 Entering Data	12
1.10.6 Graphing Data	13
1.10.7 Printing Data and Graphs	13
1.10.8 Saving and Retrieving Information	14
1.10.9 MINITAB Macros	15
1.10.10 Summary of MINITAB Files	17
Chapter 2 Descriptive Statistics	19
2.1 Introduction	19
2.2 Selection of Samples	19
2.3 Measures of Location	20
2.3.1 The Median	20

2.3.2 The Mean	21
2.4 Measures of Variation	21
2.4.1 The Range	21
2.4.2 The Standard Deviation	22
2.4.3 Degrees of Freedom	24
2.4.4 The Calculating Form for the Standard Deviation	25
2.5 The Normal Distribution	26
2.6 Counting	30
2.6.1 Multiplication of Choices	30
2.6.2 Factorials	31
2.6.3 Permutations	31
2.6.4 Combinations	32
2.7 MINITAB Commands to Calculate Descriptive Statistics	34
Chapter 3 Inferential Statistics	37
3.1 Introduction	37
3.2 The Distribution of Sample Means (σ Known)	38
3.3 Confidence Interval for the Population Mean (σ Known)	41
3.4 Hypothesis Test for One Sample Mean (σ Known)	42
3.4.1 Hypothesis Test Rationale	42
3.4.2 Decision Limits Based on Measurement Units	44
3.4.3 Decision Limits Based on Standard (z) Units	45
3.4.4 Decision Limits Based on the p Value	46
3.4.5 Type 1 and Type 2 Errors	49
3.4.6 One-Tailed Hypothesis Tests	51
3.5 The Distribution of Sample Means (σ Unknown)	52
3.5.1 Student's t Distribution	52
3.5.2 A One-Sample Hypothesis Test for the Population Mean (σ Unknown)	54
3.5.3 A Confidence Interval for the Population Mean (σ Unknown)	55
3.6 Hypothesis Tests for Two Means	56
3.6.1 Two Independent Samples (σ_1^2 and σ_2^2 Known)	56
3.6.2 Two Independent Samples (σ_1^2 and σ_2^2 Unknown But Equal)	56
3.6.3 Two Independent Samples (σ_1^2 and σ_2^2 Unknown and Unequal)	58
3.6.4 Paired Samples	59
3.7 Inferences About One Variance (Optional)	61
3.7.1 The Distribution of Sample Variances	61
3.7.2 Hypothesis Test for One Sample Variance	63
3.7.3 Confidence Interval for the Population Variance	64
3.8 Hypothesis Tests for Two Sample Variances	65
3.9 Quick Tests for the Two-Sample Location Problem	68

3.9.1 Tukey's Quick Test	69
3.9.2 Boxplot Slippage Tests	71
3.10 General Procedure for Hypothesis Testing	73
3.11 Testing for Normality	75
3.11.1 Normal Probability Plots	75
3.11.2 Quantitative Tests for Normality	78
3.12 Hypothesis Tests and Confidence Intervals with MINITAB	79
3.12.1 Confidence Interval for μ When σ is Known	79
3.12.2 Hypothesis Tests for One Sample Mean (σ Known)	80
3.12.3 Normal Probability Plots with MINITAB	82
3.13 Sample-Size Calculations	82
3.13.1 Sample-Size Calculations for Confidence Intervals	83
3.13.2 Sample-Size Calculations for Hypothesis Tests	86
Chapter 4 DOE Language and Concepts	93
4.1 Introduction	93
4.2 Design of Experiments: Definition, Scope, and Motivation	93
4.3 Experiment Defined	94
4.4 Identification of Variables and Responses	94
4.5 Types of Variables	96
4.6 Types of Responses	97
4.7 Interactions	98
4.8 Types of Experiments	99
4.9 Types of Models	100
4.10 Selection of Variable Levels	105
4.10.1 Qualitative Variable Levels	105
4.10.2 Quantitative Variable Levels	105
4.11 Nested Variables	106
4.12 Covariates	107
4.13 Definition of <i>Design</i> in <i>Design of Experiments</i>	107
4.14 Types of Designs	108
4.15 Randomization	109
4.16 Replication and Repetition	113
4.17 Blocking	114
4.18 Confounding	117
4.19 Occam's Razor and Effect Heredity	118
4.20 Data Integrity and Ethics	119
4.21 General Procedure for Experimentation	120
4.21.1 Step 1: Cause-and-Effect Analysis	121
4.21.2 Step 2: Document the Process	123
4.21.3 Step 3: Write a Detailed Problem Statement	124
4.21.4 Step 4: Preliminary Experimentation	125
4.21.5 Step 5: Design the Experiment	126
4.21.6 Step 6: Sample Size, Randomization, and Blocking	127

4.21.7 Step 7: Run the Experiment	128
4.21.8 Step 8: Analyze the Data	129
4.21.9 Step 9: Interpret the Results	130
4.21.10 Step 10: Run a Confirmation Experiment	130
4.21.11 Step 11: Report the Experiment	131
4.22 Experiment Documentation	136
4.23 Why Experiments Go Bad	139
Chapter 5 Experiments for One-Way Classifications	143
5.1 Introduction	143
5.2 Analysis by Comparison of All Possible Pairs Means	144
5.3 The Graphical Approach to ANOVA	145
5.4 Introduction to ANOVA	147
5.4.1 The ANOVA Rationale	147
5.4.2 ANOVA Assumptions and Validation	150
5.4.3 The ANOVA Table	154
5.5 The Sum of Squares Approach to ANOVA Calculations	155
5.6 The Calculating Forms for the Sums of Squares	159
5.7 ANOVA for Unbalanced Experiments	160
5.8 After ANOVA: Comparing the Treatment Means	161
5.8.1 Introduction	161
5.8.2 Bonferroni's Method	161
5.8.3 Sidak's Method	163
5.8.4 Duncan's Multiple Range Test	164
5.8.5 Tukey's Multiple Comparisons Test	166
5.8.6 Dunnett's Test	167
5.9 ANOVA with MINITAB	167
5.10 The Completely Randomized Design	172
5.11 Analysis of Means	176
5.12 Response Transformations	177
5.12.1 Introduction	177
5.12.2 The Logarithmic Transform	179
5.12.3 Transforming Count Data	182
5.12.4 Transforming Fraction Data	183
5.12.5 The Rank Transform	184
5.13 Sample Size for One-Way ANOVA	185
5.14 Design Considerations for One-Way Classification Experiments	188
Chapter 6 Experiments for Multi-Way Classifications	191
6.1 Introduction	191
6.2 Rationale for the Two-Way ANOVA	192
6.2.1 No-Way Classification	192
6.2.2 One-Way Classification	193
6.2.3 Two-Way Classification	196

6.3 The Sums of Squares Approach for Two-Way ANOVA (One Replicate)	202
6.4 Interactions	203
6.5 Interpretation of Two-Way Experiments	210
6.5.1 Introduction	210
6.5.2 The Randomized Complete Block Design	211
6.5.3 $a \times b$ Factorial Experiments	212
6.6 Factorial Designs	213
6.7 Multi-Way Classification ANOVA with MINITAB	215
6.7.1 Two-Way ANOVA with MINITAB	215
6.7.2 Creating and Analyzing Factorial Designs in MINITAB	221
6.8 Design Considerations for Multi-Way Classification Designs	227
Chapter 7 Advanced ANOVA Topics	231
7.1 Incomplete Factorial Designs	231
7.2 Latin Squares and Other Squares	232
7.3 Fixed and Random Variables	235
7.3.1 One-Way Classification (Fixed Variable)	235
7.3.2 Two-Way Classification (Both Variables Fixed)	237
7.3.3 One-Way Classification (Random Variable)	238
7.3.4 Two-Way Classification (One Fixed and One Random Variable)	241
7.3.5 Two-Way Classification (Both Variables Random)	242
7.4 Nested Designs	248
7.4.1 Nested Variables	248
7.4.2 Two-Stage Nested Design: $B(A)$	248
7.4.3 Analysis of Nested Designs in MINITAB	249
7.5 Power Calculations	250
7.5.1 Comments on Notation	250
7.5.2 General Introduction to Power Calculations	252
7.5.3 Factorial Designs with All Variables Fixed	254
7.5.4 Factorial Designs with Random Variables	256
7.5.5 Nested Designs	261
7.5.6 General Method to Determine the Power for a Fixed Variable	263
7.5.7 General Method to Determine the Power for a Random Variable	266
Chapter 8 Linear Regression	273
8.1 Introduction	273
8.2 Linear Regression Rationale	273
8.3 Regression Coefficients	277
8.4 Linear Regression Assumptions	282
8.5 Hypothesis Tests for Regression Coefficients	285

8.6	Confidence Limits for the Regression Line	289
8.7	Prediction Limits for the Observed Values	290
8.8	Correlation	293
8.8.1	The Coefficient of Determination	293
8.8.2	The Correlation Coefficient	294
8.8.3	Confidence Interval for the Correlation Coefficient	295
8.8.4	The Adjusted Correlation Coefficient	298
8.9	Linear Regression with MINITAB	299
8.10	Transformations to Linear Form	301
8.11	Polynomial Models	306
8.12	Goodness of Fit Tests	309
8.12.1	The Quadratic Model as a Test of Linear Goodness of Fit	309
8.12.2	The Linear Lack of Fit Test	312
8.13	Errors in Variables	316
8.14	Weighted Regression	317
8.15	Coded Variables	318
8.16	Multiple Regression	320
8.17	General Linear Models	327
8.18	Sample Size Calculations for Linear Regression	337
8.18.1	Sample Size to Determine the Slope with Specified Confidence	337
8.18.2	Sample Size to Determine the Regression Constant with Specified Confidence	341
8.18.3	Sample Size to Determine the Predicted Value of the Response with Specified Confidence	342
8.18.4	Sample Size to Detect a Slope Different From Zero	343
8.19	Design Considerations for Linear Regression	345
Chapter 9	Two-Level Factorial Experiments	347
9.1	Introduction	347
9.2	The 2^1 Factorial Experiment	347
9.3	The 2^2 Factorial Experiment	351
9.4	The 2^3 Factorial Design	362
9.5	The Addition of Center Cells to 2^k Designs	367
9.6	General Procedure for Analysis of 2^k Designs	370
9.7	2^k Factorial Designs in MINITAB	372
9.7.1	Creating the 2^k Designs in MINITAB	372
9.7.2	Analyzing the 2^k Factorial Designs with MINITAB	375
9.8	Extra and Missing Values	389
9.9	Propagation of Error	390
9.10	Sample Size and Power	392
9.10.1	Sample Size and Power to Detect Significant Effects	392
9.10.2	Sample Size to Quantify Effects	396
9.11	Design Considerations for 2^k Experiments	397

Chapter 10 Fractional Factorial Experiments	399
10.1 Introduction	399
10.2 The 2^{5-1} Half-Fractional Factorial Design	400
10.3 Other Fractional Factorial Designs	406
10.4 Design Resolution	407
10.5 The Consequences of Confounding	411
10.6 Fractional Factorial Designs in MINITAB	415
10.6.1 Creating Fractional Factorial Designs in MINITAB	415
10.6.2 Analysis of Fractional Factorial Designs with MINITAB	417
10.7 Interpretation of Fractional Factorial Designs	421
10.7.1 Resolution V Designs	421
10.7.2 Resolution IV Designs	422
10.7.3 Resolution III Designs	429
10.7.4 Designs of Resolution VI and Higher	430
10.8 Plackett–Burman Designs	432
10.9 Sample-Size Calculations	432
10.10 Design Considerations for Fractional Factorial Experiments	434
Chapter 11 Response-Surface Experiments	437
11.1 Introduction	437
11.2 Terms in Quadratic Models	438
11.3 2^k Designs with Centers	441
11.4 3^k Factorial Designs	443
11.5 Box–Behnken Designs	444
11.6 Central Composite Designs	448
11.7 Comparison of the Response-Surface Designs	453
11.7.1 Number of Observations and Error Degrees of Freedom	454
11.7.2 Number of Levels of Each Variable	455
11.7.3 Uncertainty About the Safety of Variable Levels	456
11.8 Response Surface Designs in MINITAB	458
11.8.1 Creating Response-Surface Designs in MINITAB	458
11.8.2 Analysis of Response-Surface Designs in MINITAB	458
11.9 Sample-Size Calculations	466
11.9.1 Sample Size for 2^k and 2^{k-p} Plus Centers Designs	467
11.9.2 Sample Size for 3^k Designs	470
11.9.3 Sample Size for Box–Behnken Designs	471
11.9.4 Sample Size for Central Composite Designs	473
11.10 Design Considerations for Response-Surface Experiments	474
Appendix A Statistical Tables	477
A.1 Greek Characters	477
A.2 Normal Distribution: Values of $p = \Phi(-\infty < z < z_p)$	478
A.3 Student's t Distribution: Values of t_p where $P(t_p < t < \infty) = p$	480
A.4 χ^2 Distribution: Values of χ_p^2 where $P(0 < \chi^2 < \chi_p^2) = p$	481

A.5 *F* Distribution: Values of F_p where $P(F_p < F < \infty) = p$ 482

A.6 Critical Values for Duncan’s Multiple Range Test ($r_{0.05,p,df_e}$) 484

A.7 Critical Values of the Studentized Range Distribution ($Q_{0.05}(k)$) 485

A.8 Critical Values for the One-Way Analysis of Means ($h_{0.05,k,df_e}$) 486

A.9 Fisher’s *Z* Transformation: Values of $Z = \frac{1}{2} \ln \left(\frac{1+r}{1-r} \right)$ 487
