1	Introduction	1
1.1	The Main Classes of Materials from the Point of View of Mechanical Properties	1
1.1.1	What Is a Material?	1
1.1.2	Industrial Importance	2
1.1.3	Importance of Mechanical Properties	7
1.1.4	Bond Types for the Main Classes of Materials	9
1.1.5	Main Types of Mechanical Behaviour	10
1.1.6	Modes of Failure	11
1.1.7	Mechanical Properties as Criteria for Choice of Materials. From Properties to Performances	13
1.1.8	As a Conclusion: The Structure of the Books	15
1.2	Microstructures of Materials	16
1.2.1	The Importance of Microstructural Observations	16
1.2.2	Scales of Observation. Available Means of Observation.....	17
1.2.3	Examples of Microstructures	35
1.3	Characterisation of Mechanical Properties	53
1.3.1	Aim of Mechanical Tests	53
1.3.2	Servo-Controlled Testing Machines.....	53
1.3.3	Tensile Test.....	54
1.3.4	Compression Test	60
1.3.5	Other Tests	60
1.3.6	Measurements of Elastic Characteristics.....	65
1.3.7	Tendencies in the Evolution of Methods for Studying Mechanical Properties of Materials	67
1.4	Constitutive Equations: General Considerations	67
1.4.1	Modelling.....	67
1.4.2	Constitutive Equations: Main Classes.....	68
1.4.3	General Formulation of the Constitutive Equations	70
1.4.4	Anisotropy and Heterogeneity.....	72

2 Elastic Behaviour	83
2.1 Elastic Potential	84
2.1.1 Strain Energy	84
2.1.2 Elastic Potential and the Complementary Energy	85
2.1.3 Thermodynamic Definition	86
2.1.4 Isothermal and Adiabatic Elastic Compliances	88
2.2 Two Major Classes of Elastic Behaviour	90
2.2.1 General Considerations	90
2.2.2 Rubber Elasticity	91
2.2.3 Cohesion Energy, Elastic Constants	97
2.3 Linear Elasticity	99
2.3.1 Elastic Moduli and Compliances	99
2.3.2 Anisotropy	103
2.3.3 Stability of the Equilibrium	109
2.3.4 Field Equations	110
2.3.5 Example: Propagation of Plane Sine Waves	110
2.4 Variational Methods: Introduction to the Finite Elements Method	112
2.4.1 Extremal Theorems in Linear Elasticity	113
2.4.2 Principle of the Finite Element Method	115
2.5 Heterogeneous Materials: Estimates and Bounds in Linear Elasticity	117
2.5.1 Effective Moduli and Compliances	118
2.5.2 The Case of Initial Deformations	119
2.5.3 Bounds for the Overall Moduli and Compliances	122
2.6 Elasticity of Heterogeneous Materials: Estimates for the Overall Moduli and Compliances	126
2.7 The Inclusion Problem	127
2.7.1 Inclusion with Uniform Stress-Free Strain in a Load-Free Infinite Matrix	127
2.7.2 The Case of Isotropic Elasticity	130
2.7.3 Other Problems Concerning Ellipsoidal Inclusions	132
2.7.4 Notes	136
2.8 Improved Bounds and Estimates for Elastic Inhomogeneous Materials	137
2.8.1 Methodology for Getting Sharper Bounds (Outline)	137
2.8.2 Improved Estimates	142
2.9 Systematic Theory of the Elasticity of Random Media (Outline)	146
2.9.1 General Equation for Heterogeneous Elastic Media	146
2.9.2 Properties of the Modified Green's Operator	148
2.9.3 Equation for the Effective Moduli	150
2.9.4 Bounds and Estimates for the Effective Moduli	151
