<i>Preface</i>	<i>page xi</i>
1 Introduction	1
1.1 Closed time contour	1
1.2 The outline of this book	6
2 Bosons	10
2.1 Bosonic coherent states	10
2.2 Partition function	12
2.3 Bosonic Gaussian integrals	14
2.4 Normalization and continuum notation	15
2.5 Green functions	17
2.6 Keldysh rotation	19
2.7 Keldysh action and its structure	22
2.8 External sources	24
3 Single-particle quantum mechanics	29
3.1 Harmonic oscillator	29
3.2 Quantum particle in contact with an environment	32
3.3 From Matsubara to Keldysh	34
3.4 Quantum tunneling in a time-dependent potential	36
3.5 Dissipative quantum tunneling	39
4 Classical stochastic systems	44
4.1 Classical dissipative action	44
4.2 Langevin equation	45
4.3 Multiplicative noise and Martin–Siggia–Rose method	46
4.4 Optimal path approximation	49
4.5 Fokker–Planck equation	53
4.6 Ito vs. Stratonovich	57
4.7 Noise with a finite correlation time	59

4.8	Kramers problem	60
4.9	Fluctuation relation	62
4.10	Reaction models	65
4.11	Time-dependent problems	69
4.12	Large deviations in multivariable systems	72
5	Bosonic fields	76
5.1	Complex bosonic fields	76
5.2	Interactions	78
5.3	Dyson equation	80
5.4	Real bosonic fields	83
5.5	Self-energy	86
5.6	Wigner transformation	87
5.7	Kinetic term	89
5.8	Collision integral	92
6	Dynamics of collisionless plasma	97
6.1	Plasma action	97
6.2	Plasmons and Landau damping	101
6.3	Acoustic modes in plasma	102
6.4	Random phase approximation	104
6.5	Beyond linearized dynamics	108
6.6	Non-linear Landau damping	112
7	Kinetics of Bose condensates	115
7.1	Gross-Pitaevskii equation	115
7.2	Quasiparticles	118
7.3	Collisionless relaxation of the condensate fluctuations	123
7.4	Condensate growth and collapse	126
7.5	Fluctuations	131
7.6	Semiclassical dynamics of the condensate	135
7.7	Quasiparticle collision integral	137
7.8	Dynamics of a quantum impurity in a superfluid	141
8	Dynamics of phase transitions	147
8.1	Dissipative chains and membranes	147
8.2	Equilibrium statistical mechanics	149
8.3	Critical nucleation in first order transitions	151
8.4	Critical dynamics near a classical second order transition	154
8.5	Hohenberg-Halperin classification	160
8.6	Quantum phase transitions	163
8.7	Absorbing state transitions in reaction-diffusion models	166
8.8	Dynamics of growing surfaces	176

9	Fermions	183
9.1	Grassmann variables, fermionic coherent states and Gaussian integrals	183
9.2	Partition function	186
9.3	Green functions and Keldysh rotation	188
9.4	Free fermionic fields and their action	190
9.5	External fields and sources	191
9.6	Free degenerate Fermi gas	196
9.7	Interactions	197
9.8	Kinetic equation	201
9.9	Stoner instability	205
10	Quantum transport	210
10.1	Landauer formula	210
10.2	Shot noise	213
10.3	Counting statistics	215
10.4	Fluctuation relation	221
10.5	Adiabatic pumping	222
10.6	Spin torque	225
11	Disordered fermionic systems	234
11.1	Kinetic equation approach	234
11.2	Averaging over the quenched disorder	237
11.3	Non-linear sigma-model	241
11.4	Stationary point and fluctuations	245
11.5	Sources and external fields	248
11.6	Kubo formula and linear response	250
11.7	Cooper channel	252
11.8	Weak localization and scaling	255
12	Mesoscopic effects	260
12.1	Spectral statistics	260
12.2	Wigner–Dyson statistics	264
12.3	Universal conductance fluctuations	267
12.4	Full counting statistics in a disordered wire	270
12.5	Tunneling action	274
12.6	Chaotic cavity	277
13	Electron–electron interactions in disordered metals	280
13.1	$\mathcal{K}$ -gauge	280
13.2	Non-linear sigma-model for interacting systems	284
13.3	Zero bias anomaly	286
13.4	Altshuler–Aronov effect	290
13.5	Kinetic equation	293

14	Dynamics of disordered superconductors	298
14.1	Cooper channel interactions	298
14.2	Usadel equation	301
14.3	Stationary superconductivity	305
14.4	SNS system	308
14.5	Collective modes of disordered superconductors	312
14.6	Time-dependent Ginzburg–Landau theory	319
14.7	Fluctuating superconductivity	328
