

Contents

1	Product Development – Product Formation – Rapid Product Development	1
1.1	New Demands – New Processes	1
1.1.1	Changing Conditions for Product Development – Critical Factors Affecting Success	1
1.1.2	Consequences for Product Development	4
1.1.3	Critical Factors for Success and Competitive Strategies	5
1.1.4	The Key Factor of Time	6
1.2	Simultaneous Engineering – Concurrent Engineering	10
1.2.1	Classical Steps of Product Development	10
1.2.2	Requirements for New Product-Development Strategies	11
1.2.3	The Principle of Simultaneous Engineering	12
1.3	Models	15
1.3.1	Model Classes	15
1.3.2	Influence of Models to Speed Up Product Development	18
1.4	Model Making by Rapid Prototyping as an Element of Simultaneous Engineering	21
1.4.1	Rapid Prototyping Models as Guarantors of a Defined Database	21
1.4.2	Definition: Rapid Prototyping – Rapid Tooling – Rapid Manufacturing	23
1.4.3	Relating Rapid Prototyping Models to Product Development Phases	27
2	Characteristics of Generative Manufacturing Processes	29
2.1	Basic Principles of Rapid Prototyping Processes	29
2.2	Generation of Layer Information	31
2.2.1	Description of the Geometry by a 3D Data Record	32
2.2.1.1	Data Flow	32
2.2.1.2	Modeling 3D Bodies in a Computer by Means of 3D CAD	34
2.2.2	Generation of Geometrical Layer Information on Single Layers	44
2.2.3	Projection of Geometrical Layer Information on the Layer	48
2.3	Generation of the Physical Layer Model	50
2.3.1	Solidification of Liquid Materials Photopolymerization – Stereo- lithography (SL)	50
2.3.2	Generation from the Solid Phase	61
2.3.2.1	Melting and Solidification of Powders and Granules – Laser Sintering (LS)	61
2.3.2.2	Cutting from Foils – Layer Laminate Manufacturing (LLM)	65
2.3.2.3	Melting and Solidification Out of the Solid Phase – Fused Layer Modeling (FLM)	67

2.3.2.4	Conglutination of Granules and Binders – 3D Printing	68
2.3.3	Solidification from the Gaseous Phase – Laser Chemical Vapor Deposition (LCVD)	69
2.3.4	Other Processes	70
2.4	Classification of Generative Production Processes	71
2.5	Summarizing Evaluation of the Theoretical Potentials of Rapid Prototyping Processes	72
3	Industrial Rapid Prototyping Systems	75
3.1	Rapid Prototyping Process Chain	76
3.2	Data Technique	77
3.3	Prototyper	82
3.3.1	Photopolymerization – Stereolithography (SL)	83
3.3.1.1	Machine Specific Basic Principles	83
3.3.1.2	StereoLithography Apparatus (SLA) – 3D Systems	89
3.3.1.3	STEREOS – EOS	98
3.3.1.4	Stereolithography – Fockele & Schwarze (F&S)	103
3.3.1.5	Solid Ground Curing – Cubital	105
3.3.1.6	Micro-stereolithography – MicroTEC	109
3.3.1.7	Stereolithography – EnvisionTechnologies	111
3.3.1.8	Stereolithography – PolyJet – Objet	114
3.3.2	Laser Sintering	116
3.3.2.1	Machine-Specific Basic Principles	116
3.3.2.2	Selective Laser Sintering – 3D Systems / DTM	119
3.3.2.3	Laser Sintering – EOS	127
3.3.2.4	Selective Laser Melting – Fockele & Schwarze	134
3.3.2.5	Laser Cusing , Concept Laser	136
3.3.3	Layer Laminate Manufacturing (LLM))	139
3.3.3.1	Machine-Specific Basic Principles	139
3.3.3.2	Laminated Object Manufacturing (LOM) – Cubic Technologies / Helisys	143
3.3.3.3	Rapid Prototyping System – Kinergy	149
3.3.3.4	Selective Adhesive and Hot Press Process (SAHP) – Kira	151
3.3.3.5	JP Systems 5 – Schroff Development Corp.	153
3.3.3.6	Layer Milling Process (LMP) – Zimmermann	155
3.3.3.7	Stratoconception – Charlyrobot	158
3.3.3.8	Stratified Object Manufacturing (SOM) – ERATZ/MEC	159
3.3.4	Extrusion Processes	162
3.3.4.1	Fused Deposition Modeling (FDM) – Stratasys	162
3.3.4.2	Multiphase Jet Solidification (MJS) – ITP	171
3.3.4.3	3D Plotter – Stratasys	173
3.3.4.4	ModelMaker – Solidscape / Sanders Prototype, Inc.	174
3.3.4.5	Multijet Modeling (MJM) – 3D Systems	176
3.3.5	Three-Dimensional Printing (3DP) Processes	178

3.3.5.1	Rapid Prototyping System– Z Corporation	178
3.3.5.2	Rapid Tooling System – ExtrudeHone	181
3.3.5.3	Direct Shell Production Casting (DSPC) – Soligen	183
3.3.6	Laser Generation	186
3.3.6.1	Laser Engineered Net Shaping (LENS) – Optomec	186
3.3.7	Conventional Prototype Processes and Hybrid Processes	189
3.3.7.1	Conventional Processes: High-Speed Cutting (HSC)	190
3.3.7.2	Hybrid Processes: Controlled Metal Buildup (CMB)	192
3.3.7.3	Comparison of Rapid Prototyping Processes and Conventional Processes	193
3.3.8	Summarizing Evaluation of Rapid Prototyping Processes	195
3.3.8.1	Model Accuracy	196
3.3.8.2	Surfaces	199
3.3.8.3	Benchmark Tests and User Parts	201
3.3.8.4	Comparative Evaluation of Prototypers for Functional Prototypes by Comparing Build Chambers, Accuracy, and Build Times	203
3.3.8.5	Categorization of Prototypers in Model Classes	205
3.3.8.6	Development Targets	207
3.4	Follow-Up Processes	208
3.4.1	Target Material Plastic	208
3.4.2	Target Material Metal	211
4	Rapid Tooling	219
4.1	Principal Ways to Metal Tools	220
4.2	Metal Tools Based on Plastic Rapid Prototyping Models	222
4.2.1	Precision Casting of Rapid Prototyping Master Models	222
4.2.2	Castings from Stereolithography Models	222
4.2.2.1	Direct Use of Stereolithography	222
4.2.2.2	Indirect Use of Stereolithography	223
4.3	Metal Tools Based on Plastic Rapid Prototyping Processes	227
4.4	Metal Tools Based on Metal Rapid Prototyping Processes	229
4.4.1	Multi-Component Metal Powder LASER Sintering	229
4.4.2	Single-Component Metal Powder Laser Sintering	230
4.4.3	Laser Generation	232
4.5	Summary and Perspectives	233
5	Applications	235
5.1	Rapid Prototyping in Industrial Product Development	235
5.1.1	Example: Pump Housing	235
5.1.2	Example: Office Lamp	237
5.1.3	Example: Integrated Lamp Socket	241
5.1.4	Example: Model Digger Arm	242
5.1.5	Example: LCD Projector	246

5.1.6	Example: Capillary Bottom for Flower Pots	247
5.1.7	Example: Casing for a Coffeemaker	248
5.1.8	Example: Intake Manifold of a Four-Cylinder Engine	249
5.2	Rapid Tooling in Industrial Product Development	251
5.2.1	Example: Turbocharger Casing	251
5.2.2	Example: Two-Piece Electric Connector	253
5.2.3	Example: Injection Mold Headlight Dipper Arm	257
5.2.4	Example: Permanent Mold for Precision Casting Models	258
5.3	Rapid Prototyping for the Evaluation of Calculating Methods	259
5.3.1	Models to Be Used in Calculating Methods – General	259
5.3.2	Example: Photoelastic Stress Analysis for a Cam Rod of a Truck Engine	262
5.3.3	Example: Thermoelastic Stress Analysis for Verifying the Stability of a Car Wheel Rim	264
5.4	Rapid Prototyping in Medicine	267
5.4.1	Anatomic Facsimile Models	267
5.4.2	Taylored Implants	269
5.4.3	Characteristics of Medical Models	269
5.4.4	Example: Anatomic Facsimilies for a Reconstructive Osteotomy	271
5.4.5	Example: Covering of a Cranium Defect by Titanium Implant (Cranioplasty)	273
5.5	Rapid Prototyping in Art, Archaeology and Architecture	276
5.5.1	Model Making in Art and Design	276
5.5.2	Example Art: Computer Sculpture, Georg Glückman	276
5.5.3	Example Design: Bottle Opener	277
5.5.4	Example Archaeology: Bust of Queen Teje	279
5.5.5	Model Building in Architecture	280
5.5.6	Example Architecture: German Pavilion at Expo '92	281
5.5.7	Example Architecture: House building Project	282
6	Economic Aspects	283
6.1	Strategic Aspects	284
6.2	Operative Aspects	287
6.2.1	Establishing the Optimal Rapid Prototyping Process or Processes	287
6.2.2	Establishing the Costs of Rapid Prototyping Processes	288
6.3	Service	291
6.4	Make or Buy?	292
7	Future Rapid Prototyping Processes	295
7.1	Selected Trends in Material Development	295
7.1.1	Application: Precision Casting	296
7.1.2	Application: Simulation of Series Materials	297
7.2	Selected Trends of Process Development	298
7.2.1	Laser Sintering of One-Component Materials	298
7.2.2	Laser Sintering in a Powder Bed – Selective Laser Powder Remelting (SLPR)	298

7.2.2.1	Process Principle	298
7.2.2.2	Characteristics of Quality	299
7.2.2.3	Examples of Applications	302
7.2.3	Laser Generation	303
7.2.3.1	Principle of Process	303
7.2.3.2	Quality Characteristics	306
7.2.3.3	Examples of Application	309
Appendix		315
A1 Economic Model by Siegart and Singer		315
A2 Properties and Technical Data of Rapid Prototyping Systems and -Materials		320
A3 Abbreviations		364
References, Bibliography		365
Index		371
