Preface	xiii
1 Introduction	1
1.1 Scope and Organization	2
1.2 Software	4
1.2.1 Installing <i>ProPac</i>	4
1.2.2 Package Content	5
2 Introduction to Dynamical Systems	7
2.1 Introduction	7
2.2 Preliminaries	7
2.3 Ordinary Differential Equations	10
2.4 Lyapunov Stability	17
2.4.1 Autonomous Systems	17
2.4.2 Basic Stability Theorems	19
2.4.3 Stable, Unstable, and Center Manifolds	29
2.5 Problems	33
2.6 References	35
3 Introduction to Differential Geometry	37
3.1 Introduction	37
3.2 Manifolds	38
3.3 Tangent Spaces and Vector Fields	50

3.3.1	The Tangent Space and Tangent Bundle	50
3.3.2	The Differential Map	54
3.3.3	Cotangent Spaces	56
3.3.4	Vector Fields and Flows	57
3.3.5	Lie Bracket	60
3.3.6	Covector Fields	62
3.4	Distributions and the Frobenius Theorem	65
3.4.1	Distributions	65
3.4.2	Codistributions	70
3.4.3	Invariant Distributions	74
3.4.4	Transformation of Vector Fields	74
3.4.5	Involutive Closure	77
3.5	Lie Groups and Algebras	80
3.6	Problems	89
3.7	References	89
4	Kinematics of Tree Structures	91
4.1	Introduction	91
4.2	Kinematics of Joints	92
4.2.1	The Geometry of Joints	92
4.2.2	Simple Kinematic Joints	95
4.2.3	Compound Kinematic Joints	99
4.2.4	Joint Computations	101
4.2.5	Remarks on Configuration Coordinates	104
4.3	Chain and Tree Configurations	105
4.3.1	Configuration Relations	108
4.3.2	Velocity Relations in Chains	109
4.3.3	Configuration and Velocity Computations	110
4.4	Problems	113
4.5	References	115

5	Dynamics	117
5.1	Introduction	117
5.2	Poincaré's Equations	118
5.2.1	Preliminaries	118
5.2.2	Poincaré's Form of Lagrange's Equations	120
5.3	Chain and Tree Configurations	128
5.3.1	Kinetic Energy and Poincaré's Equations	128
5.3.2	Generalized Force Calculations	132
5.4	Systems with Constraints	143
5.4.1	Differential Constraints	143
5.4.2	Holonomy and Integrability	153
5.4.3	Configuration Constraints	154
5.5	Simulation	157
5.5.1	Computing with <i>Mathematica</i>	157
5.5.2	Computing with SIMULINK	158
5.6	Problems	160
5.7	References	163
6	Smooth Affine Control Systems	165
6.1	Introduction	165
6.2	Controllability	166
6.3	Observability	177
6.4	Local Decompositions	183
6.5	Input-Output Linearization	185
6.5.1	SISO Case	185
6.5.2	MIMO Case	192
6.6	Exact (Input-State) Linearization	201
6.7	Control via Dynamic Inversion	206
6.7.1	Tracking Control	211
6.7.2	Dynamic Decoupling Control	213
6.8	Dynamic Extension	214

6.9	Nonlinear Observers	218
6.9.1	Basics of Nonlinear Observers	218
6.9.2	Exponential Detectability	219
6.10	Problems	220
6.10.1	Controllability	220
6.10.2	Feedback Linearization	222
6.11	References	225
7	Robust and Adaptive Control Systems	227
7.1	Introduction	227
7.2	Perturbations of Feedback Linearizable Systems	228
7.2.1	SISO Case	228
7.2.2	MIMO Case	235
7.3	Lyapunov Redesign for Matched Uncertainty	237
7.4	Robust Stabilization via Backstepping	244
7.5	Adaptive Control of Linearizable Systems	248
7.6	Adaptive Control via Backstepping	258
7.7	Adaptive Tracking via Dynamic Inversion	262
7.8	Problems	264
7.9	References	266
8	Variable Structure Control	267
8.1	Introduction	267
8.2	Basic Properties of Discontinuous Systems	268
8.3	Sliding	272
8.4	Reaching	274
8.4.1	Bounded Controls	274
8.4.2	Unconstrained Controls	275
8.4.3	A Variation for Unconstrained Controls	275
8.4.4	Closed Loop Stability	276

8.5 Robustness With Respect to Matched
Uncertainties 278

8.6 Chattering Reduction 279

8.7 Computing Tools 282

8.7.1 Sliding Surface Computations 283

8.7.2 Switching Control 283

8.8 Backstepping Design of VS Controls 285

8.9 Problems 302

8.10 References 305

Appendix

A *ProPac* 307

A.1 Getting Help 307

A.2 Quick Reference Tables 307
