

Contents

- 1 Introduction and Basic Principles 1**
 - 1.1 What is Additive Manufacturing?..... 1
 - 1.2 What Are AM Parts Used For? 3
 - 1.3 The Generic AM Process..... 3
 - 1.3.1 Step 1: CAD.....4
 - 1.3.2 Step 2: Conversion to STL.....4
 - 1.3.3 Step 3: Transfer to AM Machine and STL
File Manipulation..... 5
 - 1.3.4 Step 4: Machine Setup 5
 - 1.3.5 Step 5: Build..... 5
 - 1.3.6 Step 6: Removal..... 5
 - 1.3.7 Step 7: Postprocessing..... 5
 - 1.3.8 Step 8: Application 5
 - 1.4 Why Use the Term Additive Manufacturing? 6
 - 1.4.1 Automated Fabrication (Autofab).....6
 - 1.4.2 Freeform Fabrication or Solid Freeform Fabrication.....7
 - 1.4.3 Additive Manufacturing or Layer-based Manufacturing7
 - 1.4.4 Stereolithography or 3D Printing7
 - 1.4.5 Rapid Prototyping8
 - 1.5 The Benefits of AM 8
 - 1.6 Distinction Between AM and CNC Machining..... 9
 - 1.6.1 Material.....9
 - 1.6.2 Speed 10
 - 1.6.3 Complexity 10
 - 1.6.4 Accuracy..... 11
 - 1.6.5 Geometry 11
 - 1.6.6 Programming 11
 - 1.7 Other Related Technologies..... 12
 - 1.7.1 Reverse Engineering Technology..... 12
 - 1.7.2 Computer-Aided Engineering 13
 - 1.7.3 Haptic-Based CAD..... 14

1.8 About This Book	15
1.9 Exercises.....	15
References	16
2 Development of Additive Manufacturing Technology	17
2.1 Introduction.....	17
2.2 Computers	17
2.3 Computer-Aided Design Technology.....	20
2.4 Other Associated Technologies	23
2.4.1 Lasers	23
2.4.2 Printing Technologies	24
2.4.3 Programmable Logic Controllers	24
2.4.4 Materials.....	25
2.4.5 Computer Numerically Controlled Machining	25
2.5 The Use of Layers.....	26
2.6 Classification of AM Processes	27
2.6.1 Liquid Polymer Systems	29
2.6.2 Discrete Particle Systems	30
2.6.3 Molten Material Systems.....	30
2.6.4 Solid Sheet Systems.....	31
2.6.5 New AM Classification Schemes	31
2.7 Metal Systems.....	32
2.8 Hybrid Systems.....	33
2.9 Milestones in AM Development	34
2.10 AM Around the World.....	35
2.11 The Future? Rapid Prototyping Develops into Direct Digital Manufacturing.....	37
2.12 Exercises	38
References	38
3 Generalized Additive Manufacturing Process Chain	41
3.1 Introduction.....	41
3.2 The Eight Steps in Additive Manufacture	42
3.2.1 Step 1: Conceptualization and CAD	42
3.2.2 Step 2: Conversion to STL.....	44
3.2.3 Step 3: Transfer to AM Machine and STL File Manipulation.....	45
3.2.4 Step 4: Machine Setup	45
3.2.5 Step 5: Build.....	46
3.2.6 Step 6: Removal and Cleanup.....	46
3.2.7 Step 7: Post-process	46
3.2.8 Step 8: Application.....	47
3.3 Variations from One AM Machine to Another	47
3.3.1 Photopolymer-Based Systems.....	48

- 3.3.2 Powder-Based Systems..... 48
 - 3.3.3 Molten Material Systems..... 49
 - 3.3.4 Solid Sheets 50
 - 3.4 Metal Systems 50
 - 3.4.1 The Use of Substrates 50
 - 3.4.2 Energy Density 50
 - 3.4.3 Weight 51
 - 3.4.4 Accuracy..... 51
 - 3.4.5 Speed 51
 - 3.5 Maintenance of Equipment..... 51
 - 3.6 Materials Handling Issues..... 52
 - 3.7 Design for AM 53
 - 3.7.1 Part Orientation..... 53
 - 3.7.2 Removal of Supports..... 53
 - 3.7.3 Hollowing Out Parts..... 54
 - 3.7.4 Inclusion of Undercuts and Other Manufacturing
Constraining Features 54
 - 3.7.5 Interlocking Features..... 55
 - 3.7.6 Reduction of Part Count in an Assembly 56
 - 3.7.7 Identification Markings/Numbers 56
 - 3.8 Application Areas That Don't Involve Conventional
CAD Modeling 56
 - 3.8.1 Medical Modeling..... 56
 - 3.8.2 Reverse Engineering Data..... 57
 - 3.8.3 Architectural Modeling..... 57
 - 3.9 Further Discussion..... 57
 - 3.9.1 Exercises..... 59
 - References 59
- 4 Photopolymerization Processes 61**
 - 4.1 Introduction..... 61
 - 4.2 Photopolymerization Materials..... 63
 - 4.2.1 UV Curable Photopolymers..... 63
 - 4.2.2 Overview of Photopolymer Chemistry..... 65
 - 4.2.3 Resin Formulations and Reaction Mechanisms..... 67
 - 4.3 Reaction Rates..... 70
 - 4.4 Vector Scan SL..... 71
 - 4.4.1 SL Process Overview..... 71
 - 4.4.2 SL Machines..... 72
 - 4.5 SL Resin Curing Process..... 75
 - 4.5.1 Irradiance and Exposure..... 76
 - 4.5.2 Laser-Resin Interaction 78
 - 4.5.3 Photospeed..... 81
 - 4.5.4 Time Scales..... 82

4.6	SL Scan Patterns	83
4.6.1	Layer-Based Build Phenomena and Errors	83
4.6.2	WEAVE	83
4.6.3	STAR-WEAVE	85
4.6.4	ACES Scan Pattern.....	87
4.7	Vector Scan Microstereolithography.....	91
4.8	Mask Projection Photopolymerization Technologies and Processes	92
4.8.1	Mask Projection SL Technology.....	92
4.8.2	Commercial MPSL Systems	94
4.8.3	MPSL Modeling.....	95
4.9	Two-Photon SL.....	96
4.10	Summary	98
4.11	Exercises	99
	References	100
5	Powder Bed Fusion Processes	103
5.1	Introduction.....	103
5.2	SLS Process Description	103
5.3	Powder Fusion Mechanisms	105
5.3.1	Solid-state Sintering.....	105
5.3.2	Chemically-induced Sintering.....	108
5.3.3	Liquid-phase Sintering and Partial Melting.....	108
5.3.4	Full Melting	112
5.4	Powder Handling	113
5.4.1	Powder Handling Challenges	113
5.4.2	Powder Handling Systems	115
5.4.3	Powder Recycling	116
5.5	Approaches to Metal and Ceramic Part Creation.....	117
5.5.1	Metal Parts.....	117
5.5.2	Ceramic Parts.....	119
5.6	Variants of Powder Bed Fusion Processes.....	120
5.6.1	Laser-based Systems for Low-temperature Processing	120
5.6.2	Laser-based Systems for Metals and Ceramics	123
5.6.3	Electron Beam Melting.....	126
5.6.4	Line-wise and Layer-wise PBF Processes	130
5.7	Process Parameters	133
5.8	Applied Energy Correlations and Scan Patterns.....	135
5.9	Typical Materials and Applications.....	138
5.10	Materials	138
5.10.1	Capabilities and Limitations	140
5.11	Conclusions	141
5.12	Exercises	141
	References	142

- 6 Extrusion-Based Systems** 143
 - 6.1 Introduction..... 143
 - 6.2 Basic Principles 144
 - 6.2.1 Material Loading 144
 - 6.2.2 Liquification 145
 - 6.2.3 Extrusion 146
 - 6.2.4 Solidification 149
 - 6.2.5 Positional Control 150
 - 6.2.6 Bonding..... 151
 - 6.2.7 Support Generation..... 152
 - 6.3 Plotting and Path Control 153
 - 6.4 Fused Deposition Modeling from Stratasys..... 157
 - 6.4.1 FDM Machine Types..... 157
 - 6.5 Materials..... 159
 - 6.6 Limitations of FDM 160
 - 6.7 Bioextrusion 162
 - 6.7.1 Gel Formation 162
 - 6.7.2 Melt Extrusion..... 162
 - 6.7.3 Scaffold Architectures..... 164
 - 6.8 Other Systems 165
 - 6.8.1 Contour Crafting 165
 - 6.8.2 Nonplanar Systems..... 165
 - 6.8.3 FDM of Ceramics 166
 - 6.8.4 Reprap and Fab@home 167
 - 6.9 Exercises..... 168
 - References 168
- 7 Printing Processes** 171
 - 7.1 Evolution of Printing as an Additive Manufacturing Process 171
 - 7.1.1 Historical Development of 3D Printing..... 172
 - 7.1.2 Commercially Available Printing Machines..... 172
 - 7.1.3 Advantages of Printing..... 174
 - 7.2 Research Achievements in Printing Deposition 176
 - 7.2.1 Polymers..... 176
 - 7.2.2 Ceramics..... 178
 - 7.2.3 Metals..... 179
 - 7.3 Technical Challenges of Printing 181
 - 7.3.1 Droplet Formation Technologies..... 183
 - 7.3.2 Continuous Mode..... 184
 - 7.3.3 Drop-on-Demand Mode 186
 - 7.3.4 Other Droplet Formation Methods..... 187
 - 7.4 Printing Process Modeling 188
 - 7.5 Material Modification Methods 192
 - 7.5.1 Hot Melt Deposition..... 193

7.5.2	Solution- and Dispersion-Based Deposition	193
7.5.3	Prepolymer Deposition	194
7.6	Three-Dimensional Printing	195
7.6.1	Technology	195
7.6.2	Commercial Machines	196
7.6.3	Other Materials	199
7.7	Advantages of Binder Printing	201
7.8	Exercises	201
	References	203
8	Sheet Lamination Processes	207
8.1	Gluing or Adhesive Bonding	207
8.1.1	Bond-then-Form Processes	208
8.1.2	Form-then-Bond Processes	210
8.2	Thermal Bonding	212
8.3	Processes Based on Sheet Metal Clamping	214
8.4	Ultrasonic Consolidation	214
8.4.1	UC Bond Quality	216
8.4.2	UC Process Fundamentals	216
8.4.3	UC Process Parameters and Process Optimization	220
8.4.4	Microstructures and Mechanical Properties of UC Parts	222
8.4.5	Modeling of UC	226
8.4.6	UC Applications	231
8.5	Conclusions	234
8.6	Exercises	235
	References	235
9	Beam Deposition Processes	237
9.1	Introduction	237
9.2	General Beam Deposition Process Description	239
9.3	Material Delivery	240
9.3.1	Powder Feeding	240
9.3.2	Wire Feeding	243
9.4	BD Systems	244
9.5	Process Parameters	248
9.6	Typical Materials and Microstructure	248
9.7	Processing–Structure–Properties Relationships	252
9.8	BD Benefits and Drawbacks	256
9.9	Exercises	258
	References	258
10	Direct Write Technologies	259
10.1	Direct Write Technologies	259
10.2	Background	259

10.3 Ink-Based DW	260
10.3.1 Nozzle Dispensing Processes	261
10.3.2 Quill-Type Processes	264
10.3.3 Inkjet Printing Processes	265
10.3.4 Aerosol DW	266
10.4 Laser Transfer DW	267
10.5 Thermal Spray DW	270
10.6 Beam Deposition DW	272
10.6.1 Laser CVD	272
10.6.2 Focused Ion Beam CVD	274
10.6.3 Electron Beam CVD	275
10.7 Liquid-Phase Direct Deposition	275
10.8 Beam Tracing Approaches to Additive/Subtractive DW	276
10.8.1 Electron Beam Tracing	277
10.8.2 Focused Ion Beam Tracing	277
10.8.3 Laser Beam Tracing	277
10.9 Hybrid Technologies	278
10.10 Applications of Direct Write Technologies	278
