1	Introduction	1
1.1	The Intention	1
1.2	The Concept	1
1.3	Modelling	5
1.3.1	Modelling of Systems	5
1.3.2	Modelling of Uncertainties	11
1.3.3	Holistic Modelling	13
1.4	Summary	14
2	Review of Tools and Concepts of Diagnosis	15
2.1	Damage, Faults and their Descriptions	15
2.1.1	General Discussion	15
2.1.2	Parameter Modifications: Preliminary Examples . . .	18
2.1.3	Parameter Modifications: General Analysis	23
2.1.4	Model Structure Modifications	30
2.2	Symptoms	36
2.2.1	Introductory Remarks: Symptoms, Discriminants, Features	37
2.2.2	Symptoms of Linear Systems	37
2.2.3	Symptoms of Non-linear Systems	41
2.2.4	Features and Patterns, Classification	48
2.2.5	Remarks on the Decision Problem	51
2.2.6	Remarks on the Localization Problem	52
2.3	Damage Initiation and Evolution in Operating Systems . . .	56
2.3.1	The Physics of Structural Wear and Damage	56
2.3.2	The Energy Model of System Damage and its Measure	58
2.3.3	Damage and Symptom Evolution	60
2.3.4	Mechanical Properties of Operating Systems in the Holistic Approach	65
2.3.5	Damage Capacity and Symptom Reliability of Operating Systems and their Diagnostic Use	69
2.3.6	Application of the Damage Evolution Theory	76
2.4	Summary	80
3	Fault-Related Processes: Monitoring, Measurements, Processing of Signals	81
3.1	Monitoring	83
3.1.1	The Goal of Condition Monitoring	83
3.1.2	Symptoms, Processes and their Characteristics . . .	86
3.2	Measurements	90
3.2.1	The Goal of Measurements	91
3.2.2	Environmental and Boundary Conditions	92
3.2.3	Sensors: Properties, Calibration, Measuring Errors, Locations	93
3.2.4	Test/Measurement Set-up	102

3.3	Signal Pre-processing	102
3.3.1	Conditioning, Sampling, Pre-analysis	103
3.3.2	Filtering and Segmentation	106
3.4	Signal Processing	111
3.4.1	Increase of the Signal-to-noise Ratio	111
3.4.2	Information Condensation	112
3.4.3	Inverse Filtering	112
3.5	Summary	113
4	Model-Supported Diagnostics Via Parameter Estimation	115
4.1	The General Procedure	116
4.2	Model Adjustment – Preparations	117
4.2.1	Models	117
4.2.2	Tests	119
4.2.3	Residuals	121
4.2.4	Estimators	126
4.3	Model Adjustment – Methods	136
4.3.1	Subsystem Modelling	136
4.3.2	Adjustment Based on Eigenvalues	139
4.3.3	Adjustment with Identified Eigenvalues and Eigenvectors	147
4.3.4	Adjustment Based on Input/Output Measurements	149
4.3.5	State Observers	152
4.3.6	ARMA Models	154
4.3.7	Additional Methods	157
4.4	Algorithms	158
4.4.1	Linear Equation Solvers	159
4.4.2	Nonlinear Equation Solvers	159
4.4.3	Role of Regularization	160
4.5	Practical Hints	162
4.5.1	General	162
4.5.2	Incomplete Measurements	163
4.5.3	The Use of Order-Reduced Models	164
4.6	Use of the Knowledge Base for Diagnosis	165
4.6.1	Parameter Errors: Covariance Matrix and Confidence Regions	165
4.6.2	Dynamic Models	167
4.6.3	Static Models	167
4.6.4	Trend	168
4.7	Summary	168
5	Decision, Assessment, and System Modification Procedures	170
5.1	Fundamentals of Decision	171
5.1.1	Pseudo-deterministic Decision	171
5.1.2	Bayesian Decision Theory	174
5.1.3	Neyman-Pearson Rule	177
5.1.4	Fuzzy Logic and Decision	179
5.2	Symptom-based Decision	183

5.2.1	Deterministic Decision	184
5.2.2	Statistical Decision Based on Histograms	185
5.2.3	Statistical Decision Using Significance Tests	187
5.3	Model-based Decision	188
5.4	Assessment	188
5.4.1	Assessment of State Condition by Simulation	189
5.4.2	Cause Finding	189
5.4.3	Trend Prediction	190
5.4.4	Actions	190
5.5	System Modification Procedures	190
5.5.1	Sensitivity Analysis	191
5.5.2	Spectral Decomposition	191
5.5.3	Minimum Modification by the Application of Optimization	192
5.6	Summary	193
6	Examples and Remarks on Applications	195
6.1	An Academic Example: The FE-Model of a Satellite	195
6.1.1	The System and its Model	195
6.1.2	The Damaged System and the Simulation of the Dynamic Response	199
6.1.3	The Localization of Faults	202
6.1.4	The Adjusted Mathematical Model	206
6.2	Application in Mechanical Engineering	207
6.2.1	The Choice of Symptom Operator Shape	209
6.2.2	Model-Based Diagnostics for Rotor Machinery Including Turbosets	210
6.3	Application in Civil Engineering: Norderelb Bridge	213
6.3.1	The System and its Model	214
6.3.2	Identification of Eigenquantities	216
6.3.3	Comparison of Calculated and Estimated Eigenquantities	218
6.3.4	Simulated Damage	218
6.4	Conclusion	219
7	Concluding Remarks	221
	References	225
	Subject Index	239
