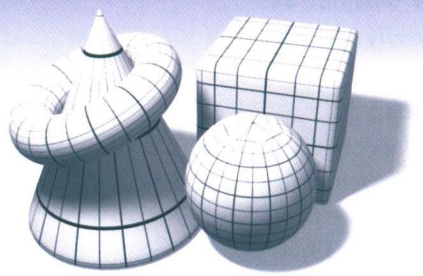
Table of Contents



Preface xvi

Introduction xviii

Module 1: Getting Started with EON Studio 1

Lesson 1.1: Introduction to Interactive 3D Environments 2

Visualization and Simulation, 2
- *Disciplines and Definitions, 3*
- *Simulations and Games, 4*
- *Models, 5*
- *Why Simulate?, 5*

Serious Games in the Real World, 5
- *Classifications and Subsets of Serious Games, 6*
- *Examples of Serious Games, 8*

What Does EON Bring to Simulation?, 10
- *EON Software, 10*
- *EON Display Systems, 14*
- *EON Plug-Ins, 16*

Navigating in EON Studio, 16
- *Navigating with a Game Controller, 19*

EON Development Workflow, 20

Simulation Creation Overview, 20

Lesson 1.2: EON Studio Workspace 24

EON Studio Terms, 24
- *Basic Explanation of Nodes, 25*
- *Basic Explanation of Prototypes, 25*

Main EON Studio Windows, 26
- *Basic Window Types, 27*
- *Simulation Tree Window, 28*
- *Components Window, 30*
- *Placing Nodes and Prototypes in the Simulation Tree, 31*
- *Routes Window, 34*

Other EON Studio Child Windows, 40
Property Bar, 40
Log Window, 42
Find Window, 44
Butterfly Window, 48
Toolbars, 51
Toolbar, 51
EON Zoom Extents Bar, 52
EONSelectionTools Bar, 52
VisualNodesTools Bar, 53
Status Bar, 53
Returning to the Default Layout, 53
Getting Help, 53
Context-Sensitive Help (F1 Key), 53
Help Topics, 54

Lesson 1.3: Introducing EON Nodes and Basic Prototypes 55

Data Types, 56
Fields, 57
Viewing Node Fields, 57
Viewing Field Properties, 58
Setting Field Values, 59
Property Bar Settings, 63
Nodes, 65
Node Libraries, 67
Node Functions, 70
Commonly Used Nodes, 74
2DText, 74
2DImage, 74
ClickSensor, 74
Converter, 75
Counter, 75
DirectSound, 75
Frame, 75
Group, 75
KeyboardSensor, 75
KeyFrame, 75
Latch, 76
Light, 76
Material2, 76
Mesh2, 76
MovieTexture, 77
Place, 77
PopupMenu, 77
Rotate, 78
SceneModifier, 78
Script, 78
SphereSensor, 78
TextBox, 78
Texture2, 78

TimeSensor, 79
ToolTip, 79
Viewport, 79
Walk, 79
WalkAbout, 79
General Guidelines for Using Nodes, 80
Copying and Moving Nodes, 80
Renaming Nodes, 81
Changing Node Properties, 81
Adding Prototypes to EON, 84
Definition and Instances, 86
Adding Prototypes to the Scene, 87
Commonly Used Prototypes, 90
Camera Functions Prototypes, 90
ObjectNav Prototypes, 91
OrbitNav Prototypes, 92
Useful Functions Prototypes, 93
Top Most-Used Prototypes, 94
Module 1: Simulation, 96

Module 2: Fundamentals of EON 99

Lesson 2.1: Fundamentals of Developing Interactive 3D Environments 100

Workflow for Creating EON Applications, 101
Before Importing to EON, 101
In EON Studio, 101
Distributing EON Applications, 102
Interactive Media Storyboarding and Project Planning, 102
Thumbnail Storyboard, 103
Graphic Storyboard, 104
External Resources, 105
Models, 105
Materials and Textures, 106
Audio and Video Files, 106
Pros and Cons of External Resources, 111
Raptor, 112
Rendering, 112
Establishing the Virtual World, 113
Visibility Determination, 114
Level of Detail, 114
Hidden Surface Removal, 116
Rasterization, 116
The Coordinate System, 117
Positioning 3D Objects in the Simulation Scene, 119
Translation, 119
Rotation, 119
Using the KeyMove Node to Place Objects, 120

Lesson 2.2: Organizing, Running, and Saving an EON Application 125

Simulation Tree and Node Hierarchy Relationships, 125
Using the Frame Node, 128
Using the Group Node for Organization, 130
Accessing and Changing Node Properties, 132
Connecting Nodes Using the Routes Window, 133
Receiving External Data via inEvent Nodes, 133
Sending Internal Data via outEvent Nodes, 135
Receiving and Sending Events, 136
Saving EON Project Files, 137
EON File Formats, 137
Internal and External Resources, 139
Viewing the EON Application in Real Time, 140
EON Studio, 140
EON Viewer, 140
Configuration Setting for Rendering Engine, 140
Driver Options, 141
Rendering Quality Options, 143
CPU Time, 144
Module 2: Simulation, 146

Module 3: Importing into EON 157

Lesson 3.1: Model Export Considerations 158

Grouping, Hierarchy, and Naming, 159
Pivot Points, 161
Geometry Optimization, 164
Camera Views and Animations, 167
Camera Positions, 167
Animations, 167
Lights, 170

Lesson 3.2: Import and Place 3D Objects 172

Procedures for Importing 3D Objects into EON, 173
Importing Compatible 3D Object File Formats, 173
Using File Format Importer, 174
EON Raptor, 179
VRML, 179
Importing Noncompatible 3D Object File Formats, 181
Positioning Prototypes, 181
MoveRotateArrows3D Prototype vs. DragManager and DragSelector Prototypes, 181
Mover Prototype, 183
StickyMover Prototype, 183
QuickPos Prototype, 183
DegreeOfFreedom Node, 183

Improving Performance and Appearance, 190
Module 3: Simulation, 192

Module 4: Object Properties 195

Lesson 4.1: Object Fundamentals 196

Texture and Materials Basics, 196
Texture Mapping, 197
Texture Projection, 198
Meshes and Materials in EON, 202
Composition of a Shape, 202
Meshes in EON, 202
Materials in EON, 203
Resources Node in EON, 203
Making the Resource Visible, 203

Lesson 4.2: Visual Nodes Library 205

Introduction to the Visual Nodes Library, 205
Resource Database, 207
Materials, 207
Textures, 208
TextureResourceGroup, 209
Meshes, 212
MeshResourceGroup, 213
Light Map Rendering, 215
Light Types, 216
Ambient Light, 216
Diffuse Light, 216
Specular Light, 216
Emissive Light, 217

Lesson 4.3: 3D Edit Tools 223

Zoom Extents Tool, 223
Selection Tools, 224
Shape Selection, 225
Geometry Selection, 225
Material Selection, 225
Texture Selection, 226
Reverse Selection, 226
Visual Nodes Tools, 228
Convert 3.1 Visual Nodes, 228
Merge Shapes with the Same Material, 228
Display Info of a Node, 230
Make Texture Compression/Resize Permanent, 230
Remove Duplicated Resources, 230
Face Fixing Tool, 232
Paint Material Tool, 232
Module 4: Simulation, 234

Module 5: Object Appearance, Behavior, and Interactivity 237

Lesson 5.1: Modify Object Appearance 238

Adding Light, 238
Light Modes, 239
Light Node Parameters, 239
Default Light Nodes, 242
Adding Textures, 243
Texture2 Node Properties, 244
Material2 Node, 244
Object Appearance, 244
Scaling: Changing the Size of Objects, 244
Shape Node, 245
Transparency, 245
Modifying Render Settings, 246
Driver, 247
Rendering Quality, 248

Lesson 5.2: Add Behavior and Interactivity to Simulations 250

Adding Motion, 250
Scene Navigation Using the Camera, 251
Object Navigation Model, 251
Walk Navigation Model, 251
Methods of Movement, 251
OrbitNav Prototype, 251
Walk Node, 251
Joystick Node, 254
WalkAbout Node, 255
KeyMove Node, 255
SuperMan Prototype, 256
Object Movement in 3D Space, 256
Movement Along a Predefined Path, 257
Sensor Nodes, 264
Interactive Movement, 267
Handling Collisions, 267
Base Nodes Overview, 267
Collision Geometry Types, 268
Collision Response, 270
Module 5: Simulation, 272

Module 6: EON Views and User Interfaces 275

Lesson 6.1: Viewports and Cameras 276

Understanding Viewports in EON, 276
EON Viewport Elements, 277
EON Viewport Properties, 279

Understanding Cameras in EON, 282
Creating Camera Views in EON, 282
Collision on a Camera, 284

Lesson 6.2: User Interfaces 287

Understanding GUI, 287
Usability, 288
User Interfaces, 288
Exploring Interfaces in EON, 289
GUI Controls and Buttons Prototypes, 293
GUIControls Nodes, 294
Buttons Prototypes, 295
Creating an Interface in EON, 297
Adding Interactivity to the Interface, 300
Add Buttons to the Interface, 303
Module 6: Simulation, 307

Module 7: Add Media 311

Lesson 7.1: Fundamentals of Media 312

Media in the Real World, 312
Media Nodes in EON, 314
Fundamentals of Sound, 314
Sound from Science Class, 314
Sound Attenuation, 315
Orientation of Sound, 315
Stereo Sound, 316
3D Sound in EON, 316
Microsoft's DirectSound® Component of DirectX, 316
DirectSound Node, 316
Volume of Sound, 317
Fundamentals of Video, 321
File Types, 321
Microsoft DirectShow, 322
Quality vs. File Size, 323

Lesson 7.2: Adding Sound to a Simulation 325

Sound in a Simulation, 325
DirectSound Node, 326
DirectSound Node Properties, 326
DirectSound Node Fields, 328
Media File Storage, 328
Sound Node, 334
Sound Node Properties, 334
Creating Realistic Sound, 338
SimultaneousSound Prototype, 341

SmoothOperator Prototype, 343
Event Properties, 345
Using Keys, 345

Lesson 7.3: Adding Video to a Simulation 348

Video in a Simulation, 348
MovieTexture Node, 349
MovieTexture Node Properties, 349
MovieTexture Node in Context, 354
Many Ways to Use the MovieTexture Node, 356
TVChannelSwitcher Prototype, 357
Setting Up a TVChannelSwitcher Prototype, 357
Fields, 358
Module 7: Simulation, 360

Module 8: EON Prototypes 363

Lesson 8.1: Fundamentals of Prototypes 364

What Are Prototypes?, 364
Why Use Prototypes?, 365
What Is an EON Prototype?, 365
Prototype Definition vs. Prototype Instance, 366
Prototype Library Files, 367
Object vs. Functional Prototypes, 368
Parts of a Prototype, 369
Local Prototypes Window, 370
Open Source Development, 370
Dynamic Prototypes, 371
How Prototypes Work in EON, 371
What Happens in a Prototype When You Run the Simulation?, 373
Simulation Startup, 373
Simulation Runtime, 373
Simulation Shutdown, 373

Lesson 8.2: Using EON-Supplied Prototypes 376

Introduction to the EON-Supplied Prototypes, 376
How Are Prototypes Different from Nodes?, 376
Most Versatile Prototypes, 377
Most Frequently Used Prototypes, 377
Derivative Prototypes, 378
Prototype Libraries, 378
Selecting a Prototype Library, 379
Using Selected Prototypes, 380
General Tips for Using EON-Supplied Prototypes, 396
Copying Node References to SFNode Fields, 396
Some Prototypes Automatically Find Node References, 397

Prototypes Provide a Convenient Way to Send Events, 397
IsActive and IsNotActive Fields, 398
Placing Prototypes in the Simulation Tree, 399
How Can You Tell That a Node Is a Prototype Instance?, 399
Inserting Additional Prototype Instances, 400
ClickSensors Can Reside Inside Prototypes, 400
Some Prototypes Need Other Prototypes, 400
Common Fields Used by Prototypes, 400
DisableWhenMoving Field, 400
Refresh Field, 401
MouseButton Values Fields, 401
Getting Help to Set Up and Use Prototypes, 401
Using 3D View Prototypes, 403
Using 2D View Prototypes, 419

Lesson 8.3: Developing EON Prototypes 435

Creating Prototypes, 435
Creation Methods, 436
Start Prototype Creation with a Frame, 436
Naming a New Prototype, 436
Preserving Routes and Node References, 436
Resolve Resource References, 437
Nested Prototypes, 440
Adding or Inserting Prototype Instances, 440
Editing Prototypes, 441
Customizing Prototypes, 442
Editing Prototype Definitions, 442
Editing the Subtree, 442
Editing the General Properties, 444
Editing the Exported Fields, 447
Deleting Prototypes, 450
Instance Counter, 450
Deleting a Prototype Instance, 450
Working with Prototype Libraries, 451
Creating a Prototype Library, 451
Storing Prototypes, 452
EOP File Format, 453
Adding Prototypes to a Library, 453
Removing Prototypes from a Library, 453
Moving Prototypes, 453
Deleting Prototype Libraries, 454
EDP File Format, 454
Prototype Development Example, 454
Prototype Optimization Example, 467
Scripting for Prototypes, 468
Rearranging the Sequence of Exported Fields, 469
Using Prototypes to Create or Delete Nodes, 471
Module 8: Simulation, 472

Module 9: Scripting and Dynamic Load 477

Lesson 9.1: Fundamentals of Scripting 478

What Is Scripting?, 478

Why Use Scripting?, 479

Programming Concepts, 481

Scripting vs. Programming, 481

Object-Oriented Programming, 482

How Scripting Works in EON, 483

Script Node, 483

Scripting Languages, 484

EON Extensions to the Scripting Language, 484

What Are Fields?, 485

Event-Driven Simulations, 486

What Can a Script Do?, 486

What Cannot Be Done with Script?, 486

Creating Fields for the Script Node, 487

SFNode and MFNode Data Types in a Script Node, 488

Event Handlers, 490

Creating Event Handlers for User-Defined Fields, 491

Designing Scripts, 498

Using the Script Editor, 503

Opening the Script Editor, 503

Editing in the Script Editor, 503

Scripting Basics—JScript, 510

Statements, 510

Variables, 511

Operators, 513

Intrinsic Objects, Methods, and Properties, 514

User-Defined Objects, Methods, and Properties, 514

User-Defined Functions, 515

Accessing EON Field Values, 515

Single Field (SF) Type Fields, 516

Multiple Field (MF) Type Fields, 517

Lesson 9.2: Using Scripts 519

Program Flow in EON, 519

Stages of Program Flow, 520

Program Flow Example, 522

Calling a Function vs. Triggering a Function, 523

How to Make Global Variables and Functions, 523

Program Flow with Script and a Frame Node, 524

The eventsProcessed Event, 525

Copy and Delete Nodes, 528

Including External Script Files, 533

Keeping Included Scripts External, 534

Working with the Includes Field, 534

Using Script and the PopupUnlimited Prototype, 535

Accessing Text Files, 549

How to Move Nodes, 561
Recursive Functions, 562
ActiveX Controls, 562
Accessing Databases, 564
Additional Functions, 564

Lesson 9.3: Dynamic Load Applications 566

Introduction to EON Dynamic Load, 566
Advantages of Using EON Dynamic Load, 567
Configurable EON Applications, 567
Running an EON Dynamic Load Application, 568
Understanding Web-Based Dynamic Load Applications, 571
Authoring Time, 571
Runtime, 571
Setting the PrototypebaseURL Property, 571
EON Studio, 572
EON Viewer, 573
Web Pages, 573
Creating a Dynamic Load Application, 574
DynamicPrototype Node, 574
Nodes That Have the Download Field, 576
Adding Download Bars to Your Application, 579
Configurable EON Dynamic Load Applications, 583
Licenses for EON Dynamic Load, 583
EON Server License, 584
Dynamic Load Stand Alone License, 584
Licensed EDZ Application, 584
Choosing the Correct Type of License, 585
Module 9: Simulation, 586

Module 10: Working with Advanced Nodes and Prototypes 589

Lesson 10.1: Creating User-Driven Simulations 590

Creating User-Driven Simulations, 590
Logic Control Nodes, 591
And, Or, XOR, and Not Nodes, 595
Flow Nodes, 599
Flow Node Basics, 600
Using the Flow Nodes, 602

Lesson 10.2: Data Manipulation 610

Data Manipulation in EON, 610
Converters, 611
Adapter Prototype , 611
GroupGUINodes Prototype, 611
Addition, Subtraction, Multiplication, and Division Nodes, 615
BooleanSplitter Prototype, 615

BooleanToIntegerConverter Prototype, 615
Colors Prototype, 615
Constant Node, 616
Convert3DPosToScreenPos Prototype, 616
Converter Node, 618
HexColor Prototype, 618
MousePos3D Prototype, 618
MouseToBoxPosition Prototype, 619
MouseToTextBoxPos Prototype, 619
Opposites Prototype, 619
RouteSwitch Node, 619

Module 10: Simulation, 628

Module 11: Running Simulations on End User Computers 633

Lesson 11.1: Building Distribution Files 634

Introduction to Simulation Distribution, 634
Distribution File Format, 635
Why Should You Create Distribution Files?, 635
Creating a Distribution File, 636
Optimization Features, 637
Polygon Reduction, 638
Geometry Compression, 639
Texture Compression and Conversion, 641
Distribution Prototype Files, 642
External Resource Files, 646
Resource Streaming and Loading, 647
Example of Streaming, 647
Deciding to Use Streaming, 647
Streaming vs. Dynamic Load, 648
Sharing and Protecting Resources, 648
Protecting Resources from Unauthorized Use, 648
Controlling Access to External Resource Files, 649

Lesson 11.2: Web Publishing and Runtime Installation 656

Using the EON Web Publisher Wizard, 656
Step 1: Select a Template, 657
Step 2: Select Events, 658
Step 3: Configure Background, 659
Step 4: Web Page Configuration, 660
Step 5: Where Do You Want to Store Your New Site?, 660
Step 6: Summary, 662
Running EON Simulations on End User Computers, 666
Two Installation Programs, 667
EON Applications on the Internet, 667
CD/DVD Distribution, 668
What Is EonX?, 668
What Is an ActiveX Control?, 669

Where Does the EON Viewer Setup Program Place Its Files?, 669
System Requirements, 669
When Does a User Need an EON License?, 670
Uninstalling EON Runtime Software, 670
EON Dependency Walker, 670
Module 11: Simulation, 672

Appendix A: EON Prototypes 675

Appendix B: EON Scripting Reference 687
EON Base Object, 688
Using the Find Method, 693
Using the FindNode Method, 693
Using the MessageBox Method, 694
Using the SetScriptTimeout Method, 695
Using the Trace Method, 696
Using the TransformOrientation Method, 697
Using the TransformPosition Method, 697
EON Node Object, 697
Using the GetParentNode Method, 700
Using the GetField Method, 700
EON Field Object, 701
Field Types, 702
Data Types, 702
Using the GetName Method, 704
Using the GetType Method, 704
Using the GetMFCount Method, 704
Using the SetMFCount Method, 705
Using the GetMFElement Method, 705
Using the SetMFElement Method, 706
Using the AddMFElement Method, 706
Using the RemoveMFElement Method, 707
Using the Value Property, 708
Summary, 709

Glossary 710

Index 719
