
Contents

1 Fundamental Concepts and Definitions 1

- 1-1 The Nature of Thermodynamics 1
 - Some History 2
 - Uses of Thermodynamics 3
 - System and Surroundings 3
 - Analysis and Problem Solving 7
- 1-2 Definition of Units 8
- 1-3 Properties 10
 - Specific Volume or Density 11
 - Pressure 11
 - Temperature and Temperature Scales 14
 - Internal Energy 20
 - Enthalpy 21
 - Entropy 21
- 1-4 States 22
- 1-5 Processes 23
 - Reversible Process 24
 - Process Indicators 25
 - Irreversible Process 26
 - Polytropic Process 26
- 1-6 Point and Path Functions 28
- 1-7 Conversation of Mass 30
- 1-8 Chapter Summary 32
- Problems 33

2 Physical Properties 37

- 2-1 Phases of a Pure Substance 37
- 2-2 Equilibrium of a Pure Substance 38

- 2-3 Equilibrium Thermodynamic Properties: An Example 39
- 2-4 Thermodynamics Surfaces 41
 - Phase Diagrams 42
 - Other Useful Diagrams 42
 - Typical Values of Characteristic Points 43
 - Table of Properties 45
 - Steam 47
 - Closure on Steam 49
 - Refrigerant: R-12 51
- 2-5 Specific Heats and Latent Heat of Transformation 53
- 2-6 Chapter Summary 56
- Problems 57

3 Gases 62

- 3-1 Ideal Gas 62
 - Equation of State 63
 - Properties of Ideal Gases 65
- 3-2 Alternate Approximate Equations of State 73
 - Clausius Gas 74
 - van der Waals Gas 74
 - Other Forms 74
- 3-3 Real Gases 77
 - Reduced Coordinates 81
- 3-4 Mathematical Preparation 85
 - Basic Operations and Definitions 85

	Coefficients of Thermal Expansion, Compressibility, and Isothermal Bulk Modulus	88
3-5	Fundamental Relations	91
3-6	Chapter Summary	96
	Problems	97
4	Forms of Energy	101
4-1	Forms of Energy	101
4-2	Work	102
4-3	Closure on Work	110
4-4	Heat	112
4-5	Reversible Adiabatic Process	112
4-6	Heat Capacity	113
4-7	Stored (Possessed) Forms of Energy	116
	Thermal (Internal) Energy, U	116
	Potential Energy, PE	116
	Kinetic Energy, KE	117
	Chemical Energy, E_c	117
	Nuclear Energy, E_N	117
4-8	Chapter Summary	117
	Problems	119
5	The First Law of Thermodynamics	121
5-1	The First Law of Thermodynamics	121
	First Law for Closed Systems	121
	Consequences of the First Law for Closed Systems	129
	Consequences of the First Law for Open Systems	129
5-2	Guidelines for Thermodynamics, or Energy, Analysis	143
5-3	Alternate Forms of u and h	143
	Appendix for Chapter 5	148
5-4	Chapter Summary	151
	Problems	153
6	Thermodynamic Systems and Cyclic Processes	159
6-1	Heat Engines and Thermal Efficiency	159
6-2	Heat Pumps and Refrigerators	161
6-3	Reservoirs	163

6-4	Processes and Cycles—Reversible and Irreversible	163
	Reversible Processes	164
	Causes of Irreversibility	164
6-5	The Carnot Cycle	164
	Cycle	164
	Efficiency	167
6-6	Chapter Summary	171
	Problems	172

7 The Second Law of Thermodynamics 175

7-1	The Second Law of Classical Thermodynamics	175
7-2	Corollaries to the Second Law	177
7-3	The Second Law and Statistical Thermodynamics	181
7-4	The Physical Meaning of Entropy	182
7-5	More on Corollaries A, B, and C	183
7-6	More on Corollary D	184
7-7	More on Corollary E	186
7-8	More on Corollary F	188
7-9	Entropy: The Working Definition	191
	Second Law for Closed Systems	191
	Entropy Used as a Coordinate	192
	Relevant Thermodynamic Relations	195
	Computing Entropy Changes from Measurable Properties	200
	A Word about Irreversible Processes	203
	Principle of the Increase of Entropy	203
	Open System	207
7-10	Chapter Summary	212
	Problems	215

8 Basic Systems and Cycles 223

8-1	Elements of Thermal Systems	223
	Expansion or Compression Work in a Cylinder	226
	The Porous Plug and the Joule- Thomson Coefficient	228
	Turbines, Pumps, Compressors, and Fans	232

	Heat Transfer Equipment (Heat Exchangers)	244
	Nozzles and Diffusers	251
	Throttling Devices (Valves, Orifices, Capillary Tubes)	254
	Summary of Component Operation	256
8-2	Rankine Cycle	257
	The Cycle	261
	Thermal Efficiency	263
	Improvements in the Cycle	263
8-3	Air-Standard Cycles	268
	Brayton Cycle	268
	Otto Cycle	277
	Diesel Cycle	281
	Other Cycles	283
8-4	Refrigerator and Heat Pump Cycles	287
	Vapor-Compression Cycle	289
	Heat Pumps	292
	Ammonia-Absorption Cycle	295
8-5	Additional Applications	295
8-6	Chapter Summary	297
	Problems	299

9 Power Cycle Improvements and Innovations 308

9-1	Review of Basic Information	308
9-2	Improving the Rankine Cycle	308
	Reheating	308
	Regeneration	317
9-3	Improving the Brayton Cycle	323
	Regeneration	323
	Multistage Improvements	324
	Two-Shaft Arrangements	330
	Heat Recovery Systems	330
	Brayton Cycle Systems with Compressed Air Energy Storage (CAES)	330
9-4	Combined Steam and Gas Cycles (STAG, COGAS)	333
9-5	Cogeneration/Total Energy Systems (TES)	336
	Prime Movers for Cogeneration	338
	Modular Integrated Utility Systems (MIUS)	339
	Magnetohydrodynamics (MHD)	340
	Waste Heat Recovery from Engines	342

9-6	Nuclear Thermal Power Cycles	344
	Fission Plants	345
	Breeder Reactors	345
	Fusion Plants	350
9-7	Solar Power Systems	351
	Solar Thermal Power Systems	352
	Photovoltaic Systems	354
	Wind Energy	355
	Ocean Thermal Energy Conversion (OTEC)	357
	Hydroelectric Power	358
	Biomass Energy Systems	358
9-8	Geothermal Power Systems	358
	Dry-Steam Systems	359
	Hot-Water Systems	359
	Hot-Rock Systems	361
9-9	Improving the Vapor Compression Cycle	361
9-10	Chapter Summary	362
	Problems	363

10 Availability and Irreversibility 372

10-1	General Concepts	372
10-2	Available Part of Internal Energy	375
10-3	Available Part of Kinetic and Potential Energy	376
10-4	Available Part of Flow Work	376
10-5	Availability of Closed Systems	376
10-6	Availability in Steady Flow	376
10-7	Availability of Heat	377
10-8	Reversible Work	378
10-9	Irreversibility and Lost Work	379
10-10	Measures of Efficiency	388
10-11	Comments on Dead State-Selection	394
10-12	Availability-Irreversibility Analysis of Vapor-Compression Refrigeration	395
10-13	Availability-Irreversibility Analysis of Air Conditioning Systems	401
10-14	Summary	405
	Problems	406

11 More Thermodynamic Relations 411

11-1	Maxwell's Relations	412
11-2	Property Relations	415

- 11-3 Characteristic Function 420
- 11-4 Changing Phase—Clapeyron Equation 420
- 11-5 Equations of State 426
- 11-6 Developing Thermodynamic Property Tables 427
 - Determination of Entropy 427
 - Determination of Internal Energy and Enthalpy 429
- 11-7 Specific Development of Refrigerant Property Values 429
- 11-8 Criterion for Equilibrium 432
- 11-9 Chapter Summary 434
- Problems 435

12 Mixtures and Psychrometrics 437

- 12-1 Mixtures 437
 - Ideal Gases 437
 - Real Gases 444
 - Closure 445
- 12-2 Psychrometrics 446
 - Basic Definitions 446
 - The Psychrometric Chart 453
- 12-3 Basic Air Conditioning
 - Processes 462
 - Psychrometric Representations 462
 - Absorption of Space-Heat and Moisture Gains 464
 - Heating or Cooling of Air 464
 - Cooling and Dehumidifying of Air 464
 - Heating and Humidifying Air 465
 - Adiabatic Mixing of Two Streams of Air 466
 - Adiabatic Mixing of Moist Air with Injected Water 466
 - Moving Air 466
 - Approximate Equations Using Volume Flow Rates 467
- 12-4 Chapter Summary 470
- Problems 471

13 Elements of Combustion 481

- 13-1 Background 481
 - Fundamentals of Combustion 482
- 13-2 Fuels 483
 - Vapor Fuels 483
 - Liquid Fuels 483

- Solid Fuels 485
- 13-3 Combustion Equations 486
- 13-4 Combustion Calculations 491
 - The Mol 491
 - Stoichiometry 492
- 13-5 Thermochemistry 496
 - First Law for Reacting Systems 497
 - Adiabatic Flame Temperature 505
- 13-6 Chemical Equilibrium and Dissociation 507
 - Reversible Reactions 507
 - Gibbs and Helmholtz Functions and Equilibrium 508
 - Equilibrium Constant and the van't Hoff Equation 509
- 13-7 Combustion Efficiency 518
- 13-8 Fuel/Air Cycle Approximation 519
- 13-9 Other Considerations with Combustion Processes 523
 - Air Pollution 523
 - Corrosion and Acid Rain (Pollution on Exterior Surfaces) 523
- 13-10 Chapter Summary 524
- Problems 525

14 Refrigeration Systems and Heat Pumps 529

- 14-1 Vapor-Compression Cycle and Components 529
 - Heat Pumps 534
 - Annual Cycle Energy System (ACES) 537
 - Compressors 539
 - Condensers 543
 - Evaporators 547
 - Expansion Devices 551
- 14-2 Absorption Refrigeration and Heat Pumps 553
 - Absorption Cycles 553
 - Lithium-Bromide-Water Equipment 556
 - Aqua-Ammonia (Ammonia-Water) Equipment 560
 - Absorption-Cycle Heat Pumps 563
- 14-3 Air-Cycle Refrigeration 567
 - Aircraft Cooling 569
- 14-4 Vortex Tube Refrigeration 574
- 14-5 Ejector Refrigeration (Flash Cooling) 577

Automotive Applications	581
Solar-Powered Jet Refrigerator	582
14-6 Chapter Summary	584
Problems	584

15 Thermofluid Mechanics 592

15-1 Basic Concepts of Fluid Flow	592
Types of Fluids	593
Continuity Relation	594
Reynolds Number	594
Mach Number	594
Flow Regimes	594
Boundary Layers	595
Bernoulli Equation	596
Euler Equation	596
Nonisothermal Effects	597
Stagnation	597
15-2 Velocity of Sound	598
15-3 Isentropic Flow	600
Ideal Gases	602
15-4 Applications of Isentropic Flow	608
15-5 Constant Area Adiabatic Flow with Friction	612
The Momentum Relation	613
Ideal Gases	617
15-6 Constant Area Flow with Heat Exchange	618
15-7 Shock Waves	620
Ideal Gases	622
15-8 Propulsion Principles	624
Momentum Principles and Thrust	624
Propulsion Devices	626
15-9 Turbomachinery	629
Turbines	629
Axial Flow Compressors	638
15-10 Chapter Summary	641
Appendix for Chapter 15	643
Problems	645

16 Introduction to Kinetic Theory and Statistical Thermodynamics 648

16-1 Kinetic Theory	649
Equipartition	653
16-2 Distribution of Particle Velocities	656
16-3 Microstate and Macrostate	663
16-4 Thermodynamic Probability	664

Maxwell-Boltzmann Model	665
Bose-Einstein Model	665
Fermi-Dirac Model	666
16-5 Equilibrium Conditions	667
Maxwell-Boltzmann Model	667
Bose-Einstein Model	668
Fermi-Dirac Model	668
16-6 Relationship of the Three Types of Statistical Models	671
16-7 Most Probable Distribution Stability	672
16-8 Entropy and the Statistical Approach	673
16-9 Partition Function and Entropy	673
Maxwell-Boltzmann Entropy	674
Bose-Einstein Entropy	676
Fermi-Dirac Entropy	677
16-10 The Partition Function and Thermodynamic Properties	678
16-11 Compilation of the Partition Functions	679
Heisenberg's Uncertainty Principle	679
Degeneracy in Phase Space	681
Particle Energy, ϵ_r	682
16-12 Monatomic Particles	683
16-13 Simple Oscillating Particles	686
16-14 Diatomic Particles	687
16-15 Closure on Specific Heats of Solids—An Improved Theory	689
16-16 Closure on Specific Heats of Gases (Ideal Gas)	692
16-17 Specific Heat of Electrons in Conductors	694
16-18 Photon "Gas"	698
16-19 Chapter Summary	702
Problems	705

Appendixes 709

A-1 Steam Tables	710
Table A-1-1 Saturated Steam: Temperature Table (English)	710
Table A-1-2 Saturated Steam: Pressure Table (English)	714
Table A-1-3 Superheated Steam (English)	716
Table A-1-4 Compressed Liquid (English)	722
Table A-1-5 Saturated Steam: Temperature Table (SI)	724

Table A-1-6 Saturated Steam:	
Pressure Table (SI)	728
Table A-1-7 Superheated Steam	
(SI)	732
Table A-1-8 Thermodynamic	
Property Calculations of Steam	738
A-2 Refrigerant-12 Tables	749
Table A-2-1 Saturated Refrigerant-12:	
Temperature Tables	
(English)	749
Table A-2-2 Superheated	
Refrigerant-12 Table (English)	755
A-3 Air Tables	758
Table A-3-1 Low-Density Air	
(English)	759
Table A-3-2 Low-Density Air	
(SI)	764
Table A-3-3 Saturated Air:	
Temperature Table (SI)	769
Table A-3-4 Saturated Air: Pressure	
Table (SI)	771
Table A-3-5 Superheated Air	
(SI)	772

A-4 Nitrogen Tables	774
Table A-4-1 Saturated Nitrogen (N_2):	
Temperature Table (English)	774
Table A-4-2 Superheated Nitrogen	
(English)	775
A-5 Oxygen Tables	776
Table A-5-1 Saturated Oxygen (O_2):	
Temperature Table (English)	776
Table A-5-2 Superheated Oxygen	
(English)	777
A-6 Approximate Values of c_p , c_v ,	
and R	778
B More History	779
C Nomenclature and Conversion	
Factors	785
