Preface to the Polish Edition	VII
Preface to the English Edition	IX
Introduction	XI
Chapter 1 General Characteristics of the Properties of Semiconducting Polymers	1
Chapter 2 Preparation and Properties of Semiconducting Polymers	18
2.1. Synthesis of Polymers Containing Systems of Conjugated Double Bonds in the Main Chain	20
2.1.1. Polyacetylenes and Their Derivatives	21
2.1.2. Polyphenylenes and Related Polymers	27
2.1.3. Polyarylenes and Polyacene Quinone Radical Polymers (Polyarylenquinones)	32
2.1.4. Polyarylenes with a Small Number of Heteroatoms in the Side Chains	35
2.1.5. Other Conjugated Linear Polymers	37
2.2. Preparation of Semiconducting Polymers with Metal Atoms in the Main Chain	38
2.2.1. Polyphthalocyanines and Polytetracyanoethylenes	40
2.2.2. Semiconducting Polymers with Metal Cross-links	44
2.2.3. Polyferrocenes	48
2.3. The Synthesis of Polymers Containing Systems of Cumulated Triple Bonds in the Main Chain	51
2.4. Semiconducting Polymers Containing Systems of Conjugated Bonds in the Main Chain Obtained as a Result of the Modification of Previously Prepared Polymers	55
2.4.1. Semiconducting Materials Obtained by Dehydrochlorination of Halogen Containing Vinyl Polymers	55
2.4.2. Semiconducting Materials Obtained by Mild Pyrolysis of Vinyl- and Other Polymers	59
2.4.3. Semiconducting Polymers Obtained by Heat Treatment of Polyacrylonitriles	63
2.5. Preparation of Polymers Containing Heteroatoms in the Conjugation Chain	67

2.5.1. Semiconducting Polymers with Nitrogen Atoms in the Backbone Chain	68
2.5.2. Polymeric Schiff Bases and Polyazines	72
2.5.3. Polyanilines	76
2.5.4. Other Linear Semiconducting Polymers Containing Carbon-Nitrogen Bonds	78
2.5.5. Polybenzimidazoles	81
2.5.6. Heterocyclic Semiconducting Polymers	82
2.5.7. Polyxanthenes and Other Cross-linked Semiconducting Polymers	84
2.5.8. Polymers Containing Sulphur	86
2.5.9. Heterocyclic Polyarylenes	87
2.5.10. Aromatic Polyamides	88
2.5.11. Semiconducting Polymers Containing Oxygen Atoms in the Conjugation Chain	89
2.5.12. Semiconducting Polymers with Various Heteroatoms in the Chain	90
2.5.13. Complex Heterocyclic Semiconducting Polymers . .	92
2.6. Polyblends with Metals	95
2.7. Superpolymers	99
2.7.1. Polymers Obtained by Advanced Pyrolysis of Low-Molecular Weight Organic Substances	100
2.7.2. Some Remarks on Superpolymers Composed of Inorganic Materials	105
2.7.3. Thermal Polymers Containing Metal Ions and Products of Advanced Pyrolysis of High-Molecular Weight Organic Compounds	107
2.7.4. Some Remarks on the Conduction Mechanism of Organic Pyropolymers	116
2.8. Charge Transfer Semiconducting Polymers	120
2.8.1. Some Remarks on the Electrical Properties of Low-Molecular Weight Charge Transfer Complexes . .	121
2.8.2. High-Molecular Weight Charge Transfer Complexes	129
Chapter 3 The Electrical Properties of Semiconducting Polymers	140
3.1. Some Remarks on the Mechanism of Electrical Conduction in the Crystals of Low-Molecular Weight Organic Compounds	140
3.2. The Mechanism of Conduction in Semiconducting Polymers	191

3.2.1. The Effect of Chemical Structure on the Activation Energy of Conduction	197
3.2.2. The Effect of Physical Structure on the Conduction of Semiconducting Polymers	207
3.2.3. The Mobility of Charge Carriers	214
3.2.4. General Remarks on the Conduction Mechanism of Semiconducting Polymers	227
3.2.5. The Effect of Impurities on the Electrical Conduction of Semiconducting Polymers	246
Chapter 4 The Magnetic Properties of Semiconducting Polymers	273
Chapter 5 The Catalytic Properties of Semiconducting Polymers	297
Chapter 6 The Photoconduction of Semiconducting Polymers	317
Chapter 7 Biological Semiconducting Polymers	374
Chapter 8 Methods of Investigating the Electrical Properties and Photoconduction of Semiconducting Polymers	401
Chapter 9 Recent Progress and Trends in the Research on Semiconducting Polymers	428
9.1. Preparation and Electrical Properties of Semiconducting Polymers	430
9.1.1. Semiconducting Polymers of Moderate Conductivity	430
9.1.2. Crystalline Semiconducting Polymers	436
9.1.3. Polymeric Charge Transfer Complexes	464
9.2. Magnetic Properties	487
9.3. Photoconduction Processes	492
9.4. General Remarks on Theories and Models of Dark- and Photoconductivity	519
9.5. Progress in Experimental Techniques	545
9.6. Electrical Properties of Thin Films and Switching Phenomena	549
9.7. Semiconductivity in Biopolymers	558
9.8. Remarks on Trends in Application of Semiconducting Polymers	567
9.8.1. Devices, Sensors and Light Sensitive Materials	567
9.8.2. Catalysis with Organic Semiconductors	578
9.9. Conclusions	582
Bibliography	595
Supplementary Bibliography to Chapter 9	667
Subject index	687
